REPORT

OF THE

Minister of Public Works

FOR THE

PROVINCE OF ONTARIO

for the Twelve Months Ending 31st October, 1924

To His Honour Henry Cockshutt, Esq.,
Lieutenant-Governor of the Province of Ontario.

May It Please Your Honour:

As required by law, I submit for the information of Your Honour and the Legislative Assembly, the Annual Report of the works under the control of the Public Works Department, comprising the reports of the Deputy Minister, the Architect, the Engineers, and Law Clerk, for the twelve months ending the 31st of October, 1924.

Respectfully submitted,

GEO. S. HENRY,
Minister of Public Works and Highways.

Department of Public Works, Ontario,
Toronto, February 26th, 1925.

Report of the Deputy Minister of Public Works

I have the honour to submit a short summary of the works performed and several of the matters receiving the attention of the Department of Public Works, during the fiscal year ending the 31st day of October, 1924.

Maintenance and Repairs of Government Buildings.—Very careful attention was given to the maintenance and repairs of Government buildings throughout the year. Important changes were made in the lighting, heating and ventilation of the Legislative Chamber before the meeting of Parliament in February last, which added very much to the comfort of the members by the removal of the very strong glare in the lighting fixtures and by providing a more equitable temperature free from draughts and supplying a purer air. The redecoration of the chamber in lighter colours was an important feature in the improvement of the lighting. New elevators near the main entrance replaced the old ones, which had been unsatisfactory for a few years. The new elevators removed all danger of annoyance by being delayed between floors, which had occurred on more than one occasion. Notwithstanding these extra improvements and a large expenditure in painting the Parliament and Departmental Buildings, the total expenditure for maintenance and repairs of Government buildings has been less than in the preceding year.

New Departmental Office Building.—For many years past the need of a new Departmental Office building has been felt by the Government and the public who have business with the several departments which are in part located in rented buildings in many parts of the city. Purchase of the leasehold of lot No. 31 and the southerly half of lot No. 32, Queen's Park Drive, from the estate of the late W. R. Brock, was completed in October and possession obtained on November 27th, 1924. This purchase gave the Government the leasehold of the lands necessary to proceed with the erection of the proposed new office building. The work of removal of the old residences on the site and the preparation of the grounds for the new building is in progress, and is giving work to a large number of men during the season of acute unemployment. Plans and specifications are being completed by the Architect's Branch of the Department, and it is hoped that the work of construction will begin early in the new year.

Public Institution Buildings.—The Administration and Reception Hospitals Building at the Ontario Hospital, Whitby, is completed and equipment is being supplied. The electric equipment of the whole institution has been thoroughly examined and is being put in a safe and efficient working condition. An automatic telephone system has been installed. The work on the new building at the Hospital for Feeble Minded at Orillia, has been proceeding under the direction of the Superintendent of the institution. The addition to the boiler house at the Ontario Hospital, Kingston, was completed and three new boilers installed. Contracts have been awarded for two new boilers, and for a new chimney for the Ontario Hospital, London, and work has progressed to insure ample supply of steam for heating and power during the winter season. The boiler house will be enlarged and further boilers supplied early in the new year. New camp buildings at the Industrial Farm, Fort William, were completed and equipment is being supplied. Minor alterations were made to the Ontario Hospitals at Brockville and Hamilton.

Educational Buildings.—The work on the educational buildings during the year was confined almost wholly to ordinary expenditure on minor repairs and painting. The capital expenditure consisted of small sums in the completion of the works at the Northern Academy, Monteith, and Continuation School at New Liskeard, and the installation of a new heating system at the English-French Training School, Sandwich.

The work of rebuilding the schools destroyed in the fire of 1923 in Northern Ontario was completed. This included a one-room school at No. 3 Hilliard, the completion of the Consolidated School at Charlton, the completion of the public and separate schools at Haileybury.

For the Department of Education, a number of plans of proposed new school buildings have been examined and reported on; a number of existing school buildings have been examined and sketches prepared for improvements of accommodation, and a number of school boards have been supplied with drawings for proposed new buildings.

Agricultural Buildings.—The Memorial Hall at the Agricultural College, Guelph, was completed and dedicated at a service held on June 10th, 1924. It is a fine piece of Gothic architecture, executed in a very high quality of workmanship, reflecting credit on both architects and contractors. Capital expenditure on agricultural buildings consisted of alterations to McDonald Hall for laundry, a dwelling house for Poultry Department, and alterations to old Dairy Building for livestock; classroom and abattoir at the Agricultural College, Guelph; the payment of a small sum on the completion of the cottages for employees at the Western Ontario Experimental Farm, Ridgetown; the com-

pletion of the building for the Eastern Dairy School, Kingston; and the purchase of houses for the Agricultural College, Kemptville. Ordinary repairs were made to the Agricultural College at Guelph, Agricultural School, Kemptville; Horticultural Experimental Station, Vinelands; Western Experimental Farm, Ridgetown; Eastern Dairy School, Kingston, and the Ontario Veterinary College, Guelph.

District Buildings.—Building operations in New Ontario were very active throughout the year. The following new buildings were in course of erection: new gaol at Hearst, Algoma district; new court house at Cochrane; new gaol at Matheson in Cochrane district; new gaol at Haileybury, and reconstruction of the court house, Haileybury, district of Temiskaming. The new court house for the district of Thunder Bay at Port Arthur was completed and opened by holding the courts in the month of September. It is a fine building, giving accommodation for all Provincial Government officials in Port Arthur, the total cost to October 31st, 1924, being $256,057.06. Additions to the following buildings were in course of erection: court house, Gore Bay, for registry office, Manitoulin district; court house, Sudbury and registry office, Sudbury. A building was purchased at New Liskeard and fitted up as an office building for the officials of the Department of Lands and Forests, and Department of Agriculture. Additional lands were purchased for the court house at Sault Ste. Marie, and also to enlarge the grounds of the gaol at Sault Ste. Marie, which were very small, giving no opportunity for the employment of prisoners. Repairs of the court house, registry offices and lock-ups in the several districts were given attention.

Engineer's Branch.—The Engineer's Branch gave careful attention to the repair and maintenance of bridges in the unorganized and sparsely settled parts of the Province, to the construction of new bridges, the drainage of lands, and to the navigation of inland waters which, under the British North America Act, are provincial works as distinguished from the navigation under Federal jurisdiction of the great lakes, and boundary waters and works connecting them, such as the Trent Valley and Rideau Canals. In the month of March that part of the work of the Engineer's Branch consisting of the construction and repair of bridges and drainage of lands lying north of the French River was transferred to the Northern Development Branch of the Department of Lands and Forests, and Mr. James S. Leitch, assistant engineer of the Department, was transferred to the Department of Lands and Forests, as chief engineer in charge of bridge construction. By the change the Department lost a very efficient and faithful member of the staff.

Bridges.—The report of the chief engineer shows that seventy-two bridges were repaired from the maintenance appropriation during the year. One hundred and fifteen new bridges were constructed, sixteen being steel on concrete abutments, forty-eight of reinforced concrete, and fifty-one of timber, many of the latter having rubble masonry abutments.

Drainage.—Under the Provincial Aid to Drainage Act, 1921, four drainage schemes were examined by the engineer and grants amounting to $21,717 were paid to the initiating municipalities, on the recommendation of the engineer. In the unorganized districts and parts of Bruce, East Simcoe, North Ontario, North Hastings and Renfrew counties, drainage work was carried out directly by the Department, $21,120 being expended on the work. Grants were paid to two municipalities under special votes of the Legislature, upon the reports of the engineer, amount to $6,600.

Navigation.—The necessary repairs were made to the locks, dams and swing

bridges in connection with the inland navigation under the control of the Department. Three locks, seven dams and three swing bridges were repaired. A number of storage dams on the upper waters of the drainage area of the north and south branches of Muskoka River, were completed. The Provincial dredge worked in the Muskoka Lakes during the season, all channels in these lakes requiring attention have been improved, and the dredge will be removed to the Huntsville waters during the winter season for operation on the opening of navigation in the spring. The swing bridge at Port Sandfield is being rebuilt during the close of navigation, steel superstructure on concrete foundation.

The following is a summary of the expenditure by the Department of Public Works, during the fiscal year ending October 31st, 1924:

Civil Government:	
Salaries, contingencies, etc.	$77,377 82
Government Buildings:	
Maintenance and repairs.	573,921 87
Public Buildings:	
Parliament Buildings, Hospitals, Schools, Court Houses, etc.	1,066,694 63
Public Works:	
Locks, dams, bridges, etc.	361,732 50
Drainage Works:	
Works carried out by Department, chiefly in unorganized districts.	21,120 28
Drainage Aid:	
Grants to Municipalities under Provincial Drainage Aid Act.	6,600 00
Aid to Municipalities under Drainage Act, 1921 (Statutory).	21,717 00
Special Warrants:	
Purchase of Land Sault Ste. Marie, Algoma District Gaol.	3,000 00
Alterations, etc., Motion Picture Studio, Trenton.	9,892 68
Purchase of houses, Agricultural School, Kemptville.	8,250 00
Statutory:	
Minister's Salary.	6,000 00
Total expenditure, Department of Public Works.	$2,156,306 78

R. P. Fairbairn,
Deputy Minister of Public Works.

Toronto, December 13th, 1924.

ARCHITECT'S REPORT

I have the honour to submit the following report of the work done by the Architect's Branch during the year ending October 31st, 1924.

Repairs and Maintenance

Government House.—The buildings, including the residence, lodge, garage and chauffeur's apartments and greenhouse have been kept in good repair, minor repairs only being necessary, with the exception of repairs to stonework, some of which showed signs of deterioration. A. R. Bonham, chemist of the Department of Health and Labour, made an analysis of the excrescence which formed on the exposed surface of the stone and gave it his opinion that the declension was caused by the action of the sulphur in the atmosphere. To preserve the stone, it was found necessary to cover the flat surfaces of string courses and cornices with copper and treat other flat surfaces with cement waterproofing. The copper work was done under contract by the Rogers Roofing Company, the waterproofing by men in the employ of the Department.

Repairs were also made to the heating and ventilating plant. The roads and walks were kept in good order.

Parliament Buildings.—The buildings have been kept in good repair, considerable repairs have been made to the ventilating apparatus, including renewal of sections of the heating coils at fresh-air intake, which had been damaged by the frost. Improvements were made in the lighting of the Legislative Chamber by changing the lighting from sprays to nitrogen lamps, enclosed in moonstone glass and raising the lights above the line of vision. The chamber was also redecorated with a view to improving the lighting, which is now satisfactory. The electric work was done by our own electricians and the decorating by Wm. McCausland & Company. Some of the corridors and offices and the Speaker's apartments were painted.

Some minor alterations were made to give increased accommodation for offices.

The two elevators in the centre of the building, leading to the entrances of the Chamber on the second and third floors, which have been in use since the erection of the building and were worn out beyond repair, have been renewed with new machinery using the original cages. The work was done under contract by the Otis Fensom Elevator Co., of Canada.

Departmental Office Building.—Preliminary drawings have been made and work commenced on contract and working drawings for the new departmental office building to be erected on the east side of Queen's Park Crescent, fronting on Queen's Park Crescent; St. Albans Street, Surrey Place and Grosvenor Street; is planned in six units, having a total frontage of 593 feet facing Queen's Park Crescent and Surrey Place, by a depth of 212 feet on St. Albans Street and Grosvenor Street. (Three units only to be built at the present time; the other units to be added to when future developments call for them.) Will be six storeys in height, exclusive of basement, which extends under the whole building and in which storage rooms and overflow vaults will be located.

The design is in modern gothic, the exterior to be faced with Canadian grey stone. Plans are being prepared for fireproof construction with frame in reinforced concrete and concrete and tile floor construction, also for steel frame and concrete and tile floor construction. Tenders will be called for both systems, with a view to obtaining competitive prices for the work. A tunnel will be built connecting this building with the Parliament Buildings, with separate compartments for passengers, steam mains and electric conduits, etc. The boiler house, located in the second court on St. Albans Street, is being built to provide accommodation for a central plant to heat the whole of this building when complete and the Parliament Building.

Arrangements are being made to demolish and remove the present buildings on the site, including Nos. 21 and 25. Tenders will be called for and the work commenced early in the season.

The buildings used by the various departments in connection with the Parliament Buildings, including Highways Administration Building, 110 University Avenue; Spadina House, Spadina Crescent; No. 46 Richmond Street West; Nos. 5, 15, 17, 25 and 29 Queen's Park Crescent, have all been kept in good repair, as also the garages and workshops in the rear of Nos. 5, 15 and 49.

Other buildings in charge of this Department, including Osgoode Hall, Normal and Model Schools, Soldiers' Hostels, Avenue Road, Jarvis Street, Bon Air, Kingston Road and the Ontario Government Dispensary, Simcoe and Wellington Streets, have also received the necessary attention of the Department and repairs made where necessary. Considerable painting was done to all of these buildings and the heating and plumbing plants kept in good order.

Public Institutions

Ontario Hospital, London.—As the heating plant has, for some time, been inadequate to heat the many buildings connected with this institution, four out of the six boilers being worn out, it was decided to install two new boilers of a larger size to take the place of the four smaller boilers and use the remaining two boilers in conjunction with the new ones which will give ample capacity for present needs. The rearrangement of the boilers necessitated an addition to the boiler house and a new chimney, the present one not having sufficient capacity. Plans and specifications have been prepared for the addition and for the boilers and steam work. Tenders were called for the chimney and for the boilers; the contract for the former was awarded to the Canadian Custodis Co., and the latter to the John Inglis Co., of Toronto. The work in connection with both of these contracts is under way.

As it was not decided to proceed with this work until late in the season, it was deemed advisable to postpone it until next season and temporarily set up one of the new boilers, without disturbing the present boilers, and making some slight repairs to the old ones, which will ensure the heat being turned on as soon as it is required.

Ontario Hospital, Whitby.—The Administration Building, the erection of which was commenced last fall, is nearly completed and should be ready for occupancy by the end of the year. Owing to conditions over which this Department has no control, the work on this building has been considerably delayed. All roads, walks and grading surrounding this building have been completed.

Electric Work and Telephones.—Owing to the increased number of buildings which have been erected since the electric system was first installed, involving changes and additions to the system from time to time, which aggravated certain defects in the original installation, bearing in mind that some forms of equipment which are now considered standard were not available at the time the installation was made, some of the apparatus being out of gear, it was decided to call in expert advice. Mr. Ewart, electrical engineer of the firm of Ewart, Jacob & Armer & Byam, was instructed to make an examination of the plant and report on the best and most economical method of improving the system and making provision for the recently added buildings and for future extensions. Mr. Ewart's report was received and approved of by the Department. He was instructed to prepare plans and specifications and proceed with the work, which is now progressing under his supervision. All apparatus and most of the materials are purchased by the Department by tender, the work being done by men employed by the Department.

An automatic telephone system is being installed to take the place of the manual system which had been in operation since the buildings were first erected, and found to be unsuitable. The contract for supplying the switchboard equipment and phones was awarded to the Northern Electric Company, and for the installation to the Bates-Macpherson Company, both of Toronto. Good progress is being made with the work, which is also being carried on under the supervision of Mr. Ewart, who also prepared the plans and specifications for same.

Educational Buildings

The following buildings under the Department of Education, the maintenance and repairs of which are being under the charge of this Department, include:

The Normal and Model Schools	Toronto.
" " "	Ottawa.
The Normal School	Peterborough.
" "	London.
" "	Stratford.
" "	Hamilton.
" "	North Bay.
The English-French School	Sturgeon Falls.
" "	Sandwich.
School for Deaf	Belleville.
School for Blind	Brantford.

All of these buildings have been inspected by the officials of the Department from time to time and repairs made and painting done as required. Ordinary repairs only were made to these buildings with the exception of the Normal School at Peterborough, the main roof of which had to be re-covered with felt and gravel, the former covering being of galvanized iron, which had perished and beyond repairing. The new roof should last for twenty years.

Normal and Model Schools, Ottawa. New porches were erected to the boys' and girls' entrances, the work being done under contract by Mr. Chas. Lowe, of Ottawa.

Improvements were made in the heating plant of the English and French School, Sandwich, changing same from hot water system to steam. The work was done under contract by J. L. Sieber, of Sandwich, under the supervision of W. H. Bradt, Inspector of Boilers, and is giving satisfaction.

The following report in connection with public, separate, consolidated, continuation and high schools is submitted by the Assistant Architect, who had charge of this work.

The new public and separate schools at Haileybury and the new consolidated school at Charlton have been completed and a new school built at No. 3 Hilliard, thus completing the rebuilding of the schools destroyed in Northern Ontario in the fire of 1922.

The consolidated schools at Sundridge and Byng Inlet and the public school at No. 3 Clergue have been built from plans prepared by this Department.

The following school buildings have been examined, surveyed and reported on and sketch plans prepared for alterations, improvements to accommodations: Arkona, Blackstock, Capreol, Glencoe, Lucknow, Port Hope, Strathroy, Scotland and Jarvis.

The following plans for new schools and alterations to existing schools have been submitted for examination and reported on: Milverton, Port Burwell, Schreiber, Richmond, Englehart, Gore Bay, Hensall, Thamesville, Linden, Port Carling, Thorndale, McTier, Kirkfield, Lambeth, Riverside, St. Thomas, No. 12 Scarborough, Schumaker, Beaverton, Caledonia and Port Hope.

The following School Boards have been supplied with plans for new buildings: Sparta, S.S. No. 8, Bruce; S.S. No. 3, Barton; S.S. No. 2, Poland and Boston; Separate School, Ford; No. 3, E. and W. Flamboro; No. 5, Fort William, Haliburton; No. 8, Kenyon; Separate School, Little Current; No. 1, Oba; No. 1, Melancthon; No. 13, Melancthon, Paudash; Consolidated School, Richmond; No. 2, Tiverton; No. 2, Cardwell, Chelmsford; No. 4, Comber; Dalton Mills, Nakina; No. 3, Luther; Mount Ridges; Kenora; Redditt; Summertown and Shining Tree; and sketches were prepared for alterations to schools at Exeter, Holstein; new consolidated school buildings were examined

and reported on, before payment of the final grants, at Britannia Heights, Sundridge and Katrine.

Information regarding ventilation and sanitation were given for schools at Aurora, Corbyville, No. 7 Gloucester, Lorneville, Mille Roche, No. 16 Artemesia, and Alexandra. Assistance has also been given in the preparation of the new General Regulations, Public and Separate Schools, 1924.

Agricultural Buildings

The following buildings under the Department of Agriculture and which receive the attention of this Department, including the buildings, heating, lighting and sewer plants in connection with the Ontario Agricultural College, Guelph; the Ontario Agricultural School, Kemptville; the Horticultural Experimental Station, Jordan Harbour; the Ontario Demonstration Farm, New Liskeard; and the Ontario Veterinary College, Guelph.

Ontario Agricultural College.—The Memorial Hall. This building was fully completed and furnished and formally opened on June 10th. A memorial tablet, with the names of the students and graduates who gave their lives in the Great War, has been erected in the alcove off the main corridor, which was designed to receive the tablet. Stained glass memorial windows have also been placed in this alcove. The former was designed by Mr. Alfred Howell and the latter by Mr. P. Haworth; both are creditable works of art. It should be mentioned that the students and graduates subscribed the sum of about $40,000, which has been applied to the cost of the erection of the building, the memorial tablet, windows and furnishings. My thanks are due to the President of the College and the members of the Building Committee for their hearty co-operation in carrying out this work.

Old Dairy Building.—Alterations have been made to this building, converting it into an abattoir for instructional purposes, including classroom, slaughter-house, butcher shop and cattle shed. The plans and specifications were prepared from data furnished by Professor Toole.

A cottage has been erected on the grounds for one of the College Professors.

McDonald Institute.—A large amount of work has been done in this building in the construction of a laundry on the ground floor, fully equipped with up-to-date apparatus, and two laboratories for Domestic Science, all in connection with the Household Management Department.

District Buildings

General repairs have been attended to all of the buildings throughout the Districts, including Algoma, Cochrane, Kenora, Manitoulin, Muskoka, Nipissing, Parry Sound, Rainy River, Sudbury, Temiskaming and Thunder Bay.

The buildings throughout the Districts have been inspected by the officials of the Department, including court houses, gaols, lock-ups, registry offices and Land Titles office.

The gaol at Hearst has been completed and occupied for some time. A well has been sunk for water supply and is giving satisfaction. A sewer has been designed about 1,400 feet in length, which will also be used for drainage from the buildings of the Experimental Farm, through which it passes, the cost of same to be borne jointly by the Northern Development Branch of the Lands Department and the Public Works Department.

A lock-up was erected by the Continental Wood Products Company at Elsas. Two steel cells were supplied by the Government and have been installed therein.

Cochrane.—Plans and specifications were prepared and tenders called for the erection of a court house in Cochrane. The building has been designed to give accommodation for the Registry and Land Titles Offices and Government officials, including Crown Timber Agent, Crown Lands Agent, Division Court Clerk and Crown Attorney and Sheriff's offices, who are now occupying rented offices.

The building will be two storeys in height, built of brick, with cut stone trimmings, the foundations being of concrete. The foundation work is well under way, will be roofed in and a temporary boiler set up and heating mains installed in the basement to protect the building from frost during the winter months.

The contract for general trades was awarded to A. E. Holmes & Co., for heating to Purdy Mansell, and plumbing to Sheppard & Abbott, all of Toronto. This building will be completed, furnished and ready for occupancy by September next.

Steel cells have been installed in the lock-up at South Porcupine.

A new gaol has been erected at Matheson, the work being done under contract by M. F. Braden, of Orillia. This building is two storeys in height, built of brick on concrete foundations, the upper floor being divided into court room and offices for the Town Clerk on the ground floor. The gaol has four cells in the rear. The upper floor is divided into offices for the Northern Development Branch and Crown Timber and Crown Lands Agents.

Plans and specifications were prepared for an office for the Mining Recorder and Division Court room at Swastika. The building is of frame construction on cement foundations, with fireproof vaults. The work is being done by Van Rassel Bros. and the heating by Messrs. McAlindon & McCormack of Sault Ste. Marie. The work on same is well under way.

Manitoulin.—The addition to the Court House has been erected for a Registry Office to give accommodation for the Registry and Land Titles Offices, including a large vault and office for the Registrar, to take the place of the former offices which have been found to be too small for their requirements. The general trades contract was awarded to E. T. Charters, Sault Ste. Marie, and the heating and plumbing to Dunseath & McClary, of Sault Ste. Marie. A steam heating plant has been installed, heating both Court House and Registry Office.

Parry Sound.—Some slight alterations were made in the gaol and a concrete wall erected fourteen feet high, enclosing the gaol yard; this work was done by P. P. Emes, of Parry Sound. A hot water plant has been installed in the gaoler's residence, the work being done under contract by W. H. Ferrar, of Parry Sound.

Sudbury.—Plans and specifications were prepared for an extension to the Court House, increasing the size of the court room and giving additional accommodation for officials. The contract was awarded to Messrs. Gustiana & Zettler, of Sudbury, for general trades, and P. Morrison, of Sudbury, for heating, plumbing and electric wiring. Good progress is being made with this work.

A vault has been built in the Land Titles office, the work being done under contract by the Evans Co., of Sudbury.

Temiskaming.—The work of the reconstruction of the Court House, Haileybury, was duly completed and the building occupied in July last. The grounds, cement walks, steps and palisades have all been put in good shape.

Plans and specifications were prepared for a new gaol in Haileybury and the contract for general trades awarded to Messrs. Stuart & Sinclair, of Hamilton, and the heating and plumbing to Messrs. Purdy Mansell, Limited, of Toronto. The electric wiring is being done by our own men. This building is two storeys

in height with a deep basement in front, giving accommodation for kitchen, laundry and storerooms in the front portion. Provision is made for detention cells for juveniles, cells for women and cells for the insane, all of which are properly isolated. The cells for men are located in the rear of the building, two tiers in height and twelve long, twenty-four in all. The steel work for cells is being constructed under contract by Messrs. J. & J. Taylor, of Toronto, all of chrome steel. A ventilation and sanitary system is being installed which will be up to date in every particular. The building will be heated from the main boiler plant, a pipe tunnel having been constructed between the boiler room in the Court House and the apparatus room in the gaol. Good progress is being made with the work and it is expected that it will be ready for the roof before the end of the year.

A building has been purchased on Whitewood Avenue, New Liskeard, as an office building for Government officials, including the Agricultural Department, Northern Development Branch of the Lands Department. The necessary changes have been made and a new heating system installed. The building has been occupied for about a month.

Thunder Bay.—The new Court House in Port Arthur has been completed and occupied, and roads and walks laid. Considerable work remains to be done next year in improving the grounds in front of the building.

Plans and specifications were prepared for a new gaol at Port Arthur, which will be built of concrete and stone, two storeys in height, with basement under the front portion. The contract for general trades was awarded to M. H. Braden, of Orillia. This building will be the largest of its kind in the Province, containing sixty cells, provision being made for detention cells for juveniles, cells for women, and cells for the insane, all of which are properly isolated. The steel work for cells is being constructed of chrome steel, under contract by Messrs. J. & J. Taylor, of Toronto.

Miscellaneous.—Considerable alterations have been made to the Ontario Government Motion Picture Bureau at Trenton, including the heating equipment, which has been put in order and is giving satisfaction.

F. R. HEAKES,
Architect.

ENGINEER'S REPORT

I have the honour to report on the construction and maintenance of public works during the fiscal year ending October 31st, 1924.

Owing to the transfer of the Public Works in New Ontario to the control of the Northern Development Branch of the Department of Lands and Forests, the work of this Department was considerably reduced.

Bridge building in the unorganized and backward districts was carried on as in former years, by day labour, under the regular staff of foremen.

The work on bridges comprised the construction of 115 structures—16 steel bridges on concrete abutments, 48 structures of reinforced concrete and 51 timber bridges. Many of the latter consist of cedar decks on rubble masonry abutments. The most important of the works were the new steel swing bridge at Magnetawan and Sequin Street bridge in the town of Parry Sound.

A number of storage dams were completed during the year and the Grimsthorpe dam is still under way.

The provincial dredge worked in Muskoka Lakes during the season. All channels in these lakes that required attention have been improved and the dredge will be moved to the Huntsville waters during the winter.

The lockmasters reported on business at the different locks as follows:

	Steamers	Small Boats	Scows	Rafts
Port Carling	2,512	803	573	160
Huntsville	309	539	198	159
Magnetawan	526	343	141	168

The usual programme of district drainage was carried out, $18,000 being expended on the work.

Under the Provincial Aid to Drainage Act, 1921, eight large drainage schemes were examined and reported on, and grants amounting to $67,171 were recommended for payment.

The work on Maintenance of Public Works and Bridges was comparatively light after the transfer of the northern work. The classified expenditure from the Maintenance Fund was as follows:

MAINTENANCE EXPENDITURE, 1924

General		
Tools, repairs to equipment, etc.	$2,722 20	
Operating and outfitting dredge	9,259 41	
Clearing streams, placing buoys, etc.	145 60	
		$12,127 21
Repainting steel bridges		1,017 21
Operating storehouse at Bracebridge		77 15
Repairs, Lighting, etc., at Locks and Swing Bridges		
Port Carling Lock	$482 65	
Huntsville Lock	29 09	
Magnetawan Lock	1,805 27	
Port Sandfield Dock and Swing Bridge	747 80	
Huntsville Swing Bridge	33 56	
Indian Point Bridge	15 00	
		3,113 37
Repairs on Dams		
Ahmic Dam	$376 00	
Deer Lake Dam	1,835 98	
Kashee Lake Dam, Muskoka	434 91	
Kashee Lake Dam, Bolger	98 96	
Island Lake Dam, Algonquin	1,050 10	
Norman Dam	153 00	
Tea Lake Dam	358 06	
		4,307 01
Repairs to Bridges		
Kenora District:		
Annis Creek bridge, Van Horne	$287 53	
Britton Creek Bridge, Wainwright	228 85	
Keewatin Town Bridge	124 78	
Pellatt Township Bridges	257 60	
		898 76
Thunder Bay District:		
Current River Bridges, Gorham	$1,016 89	
Flint Bridge, Whitefish River	218 31	
		1,235 20
Temiskaming District:		
Falardeau Bridge, White River	$1,377 42	
Judge Bridge, White River	3,984 69	
Hudson Creek Bridge, Concession 3, Kerns	386 56	
Pearson Bridge, White River	752 73	
Wabis Bridge, Concession 3, Kerns	1,526 38	
Wabis Bridge, Concession 5, Kerns	658 39	
Wright Creek Bridge, Casey-Brethour T.L.	424 81	
		9,110 98

Nipissing District:		
Mattawa Bridge		$155 55
Parry Sound District:		
Barrett Creek Bridge, Gurd	$200 35	
Eagle Lake Bridge	107 20	
Fishway, Magnetawan	257 29	
Middle River Bridge, McKellar	64 53	
Tally-Ho Road Bridge, Humphrey	122 92

Indian River Bridges	492 41	
Mattawatchan Bridge	570 10	
Opeongo Line Bridge	221 00	
		$1,944 31

BRIDGES CONSTRUCTED UNDER SPECIAL APPROPRIATIONS

Addington and Frontenac

Adair Bridge, Sheffield.—Located between Lots 3 and 4, Con. 6, Sheffield. The bridge has a clear span of 42 feet, concrete abutments, steel beam deck, concrete floor. Roadway is 16 feet in clear width. The abutments are 14 feet in height to the floor level. The floor slab, 6 inches thick, is reinforced with steelcrete. Cost, complete, $1,600.

Fish Creek Bridge.—Located over Fish Creek at Lot 25, Con. 5, Hinchinbrooke. The bridge has a clear span of 35 feet. A steel beam deck on concrete abutments. A 6-inch concrete floor, with roadway 14 feet in clear width. The abutments are 11 feet in height to the floor level. Cost, $2,883.

Gull Creek Bridge.—Located at Lot 22, Con. 11, Sheffield. The bridge has a clear span of 16 feet. Concrete abutments, with floor slab reinforced with steel rails. The site of the bridge was changed to straighten the road and the new approaches properly graded. Cost, $665.

Northbrook Bridge.—Located over a creek on the Addington Road at Lot 27, Con. 7, Kaladar. The bridge has a clear span of 18 feet, with concrete abutments and a concrete deck. Cost, $778.

Myers Cave Bridge.—Located at the outlet of Marble Lake at Lot 23, Con. 7, in the Township of Barrie. The bridge has a clear span of 30 feet, with roadway 14 feet in clear width. Concrete abutments carry a deck of steel beams with a concrete floor. Heavy stone fills were made at each end of the bridge to widen the roadway and ease a dangerous turn at each end of the bridge. Cost, $2,892.

Otter Creek Bridge.—Located over Otter Creek on the west boundary of Barrie. Clear span of 18 feet, concrete abutments, concrete deck, reinforced with old steel rails. Cost, $519.

Salmon River Bridge.—Located over Salmon River at Lot 16, Con. 8, Kennebec. The old pier and abutments were used. They were raised about 12 inches and a new deck placed on them. The new deck consists of two spans of 33 and 38 feet, 24-inch steel girders with two floor beams in each span. Five lines of 9-inch I-beams, with the main girders, carry the 6-inch floor slab, which is reinforced with steelcrete. The approaches were properly graded. Cost, $2,813.

Strathcona Bridge.—Located over the Napanee River in the Village of Strathcona, in the Township of Camden. The old steel bridge at this place was too light for present-day traffic and had to be replaced. The abutments were in good serviceable condition. The new bridge is a standard steel span 110 feet centre to centre of bearing, with a roadway 16 feet in clear width. The steel span was supplied by the Hamilton Bridge Works at a cost of $3,300. The steel was erected by P. R. Switzer, Public Works foreman. The bridge has a concrete floor 6 inches think, reinforced with steelcrete. The bridge is

well painted and the approaches are properly graded. The Township of Camden contributed $683 towards the cost. The total expenditure was $5,693.

Bedford Mills Bridge.—Located over a creek on Lot 7, Con. 16, in Bedford Township. It has a clear span of 25 feet. Five lines of 15-inch I-beams support a concrete floor reinforced with steelcrete. The abutments are concrete and a 18 feet in height to the bridge floor. A heavy rock fill was required to build up the approaches. Cost, $1,096.

All the work in this district was done under the direction of W. W. Pringle, Road Inspector.

East Simcoe District

Black River Bridge, Con. 6, Matchedash.—Located over Black River on the 6 and 7 sideline in the 6th Con. of Matchedash. This bridge has a clear span of 27 feet. The standard concrete deck, with four lines of concrete beams, is supported on concrete piles. Stone fills are placed at each end, instead of the usual abutments. Total cost, $1,654.

Hog Creek Bridge, 3rd Line, Tay.—Located over Hog Creek on the road in front of Lot No. 4, in the 3rd Con. of Tay. A standard concrete beam bridge on concrete piles. The roadway is 14 feet in clear width. Span, 15 feet clear. Approaches, stone filled. Cost, $1,510.

North River Bridge, Con. 7, Orillia.—Located over North River on the road in front of Lot 14, in the 7th Con. of North Orillia. A standard concrete trestle with a centre span of 25 feet and an approach span of 12 feet at each end. Total length of floor, 53 feet 6 inches. Clear width, 14 feet. The approaches are built up of field stone. Cost, $2,238.

Sturgeon River Bridge, 5th Line, Medonte.—Located over Sturgeon River in front of Lot 17, in the 5th Con. of Medonte. A standard concrete beam bridge on concrete piles. Clear span of 30 feet. Roadway 14 feet in clear width. Approaches stone filled. Cost, $1,784.

The work in East Simcoe was done under the direction of Amos Train, Public Works Foreman.

Haliburton District

Allsaw Bridge.—Located on the Haliburton-Minden Road, over the narrows south of Soyer Lake in the Township of Minden. The bridge consists of a standard 80-foot steel span on concrete abutments. The abutments are 13 feet in height to the floor level. Roadway 14 feet in clear width. The floor is a 6-inch concrete slab, with steelcrete reinforcing. The steel was supplied by McGregor & McIntyre at a contract price of $1,765. A very heavy stone fill was placed at each end of the bridge. The total cost of the bridge was $5,092. P. R. Switzer was foreman in charge.

Eighth Line Bridges, Eldon.—This work consisted in placing two concrete bridges over McNeills Creek in front of Lot 12, Con. 8, Eldon. One bridge has a span of 14 feet and the other a span of 10 feet. Roadway 20 feet in clear width. The plans for the bridges were prepared by E. L. Miles, County Engineer. On report of the proper completion of the work a grant of $1,500 was paid to the Township of Eldon.

Carden Bridges.—Two concrete bridges were constructed in Carden, the Fifth Con. bridge and the Talbot River bridge. The Fifth Con. bridge is over a creek at Lot 5. It is a concrete pile bridge with a clear span of 24 feet; 14-foot clear roadway. The Talbot River bridge is on the Ninth Con. road. It has a clear span of 25 feet. Roadway 14 feet, concrete abutments. Cost of both bridges was $2,160. P. R. Switzer was foreman in charge.

Head River Bridge, Dalton.—Located over Head River on the 20-21 side line in the 2nd Con. of Dalton. A 60-foot steel span on concrete abutments; 16-foot roadway. The abutments are 12 feet in height to the floor level and rest on pile foundations. The steel span was supplied by the Dominion Bridge Company at a cost of $1,535 and was erected by Amos Train, who was foreman in charge on the entire work. Cost, $5,583.

Horseshoe Lake Bridge.—Located over the narrows west of Horseshoe Lake in the 8th Con. of Minden. A 70-foot steel span on concrete abutments. Roadway 16 feet in clear width. One end of the bridge rests on a rock bank on a prepared bridge seat. One abutment of concrete is 17 feet in height to the floor level. The 6-inch concrete floor slab is reinforced with steelcrete. The steel span supplied by the Dominion Bridge Company at a cost of $1,600 was erected by P. R. Switzer, who was foreman in charge of the entire work. Total cost, $4,640.

Lochlin Mills Bridge, Snowdon.—Located over the middle branch of Burnt River, Lots 25 and 26, Con. 14, Snowdon. A timber bridge with a clear span of 24 ft., supported with a king truss. The piers are filled with stone. The approaches are well graded, with strong guard rails in place. This work was under the direction of A. J. Southern. Total cost, $448.

Oblong Lake Bridge.—Located over the inlet to Oblong Lake at Lot 10, Con. 6, Harburn. A long timber bridge at this point had become impassable. It was decided to replace the old structure with a stone causeway. The crossing was 400 feet long, 280 feet of this requiring a fill of an average height of 6 feet. Over the balance, 120 feet, it was found advisable to repair the old structure with the best of the material from the part removed. The fill is of stone and earth and is 18 feet wide on top and is supplied with a guard rail.

Muskoka District

Bass Creek Bridge.—Located over Bass Creek on the south townline of Morrison. A standard concrete beam bridge with a clear span of 20 feet. Roadway 14 feet in clear width. The abutments are 12 feet in height to the floor level. Cost, $1,381.

Black Creek Bridge, Lot 19, Con. 8, Stisted.—A concrete bridge with a clear span of 18 feet 6 inches. The old concrete abutments were in serviceable condition, but were too short. Each abutment was extended 6 feet and a new concrete deck placed on the abutment. The approaches were widened and raised. $1,490 was expended on the work.

Duck Creek Bridge, Baysville Road, Macaulay.—A standard concrete beam bridge with a clear span of 20 feet. Roadway 16 feet in clear width. The approaches were raised and widened. Cost, $1,519.

Five Sideline Bridge, Stisted.—A standard concrete bridge with a clear span of 20 feet. Roadway 14 feet. The approaches are built up of field stone. Cost, $890.

Gilbert Creek Bridge at Lot 8, on the 3rd line of Draper. A single-span concrete pile trestle. The span is 20 feet in clear width. Roadway 14 feet in clear width. The approaches are built up with field stone. Cost, $977.

Gully Creek Bridge, Rama-Morrison Townline.—There is a deep gully at this point in which a stone culvert had been placed. The old culvert collapsed and the fill was carried away. A temporary timber bridge was placed over the gully. The new bridge is a reinforced box culvert 7 feet wide and 5 feet high, inside measurements. The culvert is 50 feet long and carries a fill 16 feet in

height. The roadway provided has a top width of 18 feet, with strong guard rails in place. Cost, $1,820.

Hurry Creek Bridge, Lot 2, Con. 2, Brunel.—A standard concrete beam bridge with a clear span of 20 feet and a roadway 14 feet in clear width. The site was changed to straighten the road and the new road was graded. Cost, $1,154.

Jo Rover Bridge.—Located over a channel between Lakes Rosseau and Joseph, on the road leading from Port Sandfield to the ports on the northwest shore of Lake Rosseau. This crossing is 360 feet long from bank to bank. The water varies in depth from 2 feet to 12 feet. The new structure consists of three steel spans, two of 60 feet each and one of 80 feet, with stone fills 75 feet long at each end.

The two centre piers consist of rock-filled cribs to low water level, with concrete piers 12 feet high, built up from the stone. These pier cribs are 10 feet wide, 24 feet long and from 10 to 12 feet in height. The end abutments consist of timber cribs 16 feet wide, 42 feet long and about 8 feet in height, filled with stone to low-water level. Concrete abutments 7 feet wide at the base and 9 feet high to the bridge seat are built up from the stone in the crib. A heavy rock fill is placed in front of each abutment. The approach fills are built up to high-water level entirely of rock. Above high-water level the fill consists of rock and earth. The centre span gives a clearance of 15 feet for the navigation of small craft.

The steel superstructure was supplied by the Hamilton Bridge Co. at a cost of $4,600. All work, including the painting and erection of steel, was done under the direction of Wm. Lowe, supervising foreman. The west approach is not yet completed. The total cost will be about $16,300.

Lawrence Creek Bridge, Lot 34, Con. 4, Caldwell.—This bridge is on the Parry Sound road. A standard concrete beam bridge with a clear span of 20 feet and a 14-foot clear roadway. The bridge was raised 2 feet above the old level and the approaches were raised and widened. Cost, $1,711.

Levers Creek Bridge, 25-26 Sideline, Con. 4, Stephenson.—A standard concrete culvert 7 feet wide and 5 feet high, inside measurements. The culvert is 30 feet long and carries a fill 5 feet high. The concrete is well reinforced throughout with 5/8-inch steel bars. Cost, $790.

All work in this district was done under the direction of Wm. Lowe, supervising foreman.

Nipissing District

A number of small timber bridges were built in this district under the direction of O. Rochefort, Road Inspector. Wherever good foundations were available, the abutments were built of rubble masonry, set in cement mortar, and decks of cedar timber placed thereon. The masonry abutments cost less than timber structures filled with stone. The bridges constructed are located as follows:

McNulty Creek Bridge, Lot 29, Con. B, Bonfield	Cost	$236 00
Sparks Creek Bridge, Lot 25, Bonfield	"	600 00
Stewart Creek Bridge, 10 Sideline, Con. 1, Calvin	"	829 00
Burritt Creek Bridge, Lot 32, Con. A, Cameron	"	802 00
Bastien Creek Bridge, Cameron	"	697 00
Bennett Creek Bridge, Lot 10, Con. 22, Cameron	"	650 00
Burritt Creek Bridge, Con. 22, Cameron	"	406 00
Clement Creek Bridge, Lot 21, Con. 10, Chisholm	"	525 00

Twelfth Con. Bridge, Lot 18, Chisholm	Cost	$804 00
Hurtibise Creek Bridge, Lot 2, Con. 7, Ferris	"	429 00
Levesque Creek Bridge, Lot 19, Con. 2, Ferris	"	401 00
Negro Creek Bridge, Lot 17, Con. 2, Ferris	"	470 00
Astorville Bridge, Con. 3, Ferris	"	386 00
Wissi Wassa Creek Bridge, Con. 2, Ferris	"	484 00
Deux Riviere Bridge, Con. B, Head	"	426 00
Dascon Creek Bridge, Lot 6, Con. 9, Lyell	"	256 00
Dixon Creek Bridge, Lot 32, Con. 11, Mattawan	"	290 00
Bontz Creek Bridge, Lot 32, Con. 8, Papineau	"	410 00
Boom Creek Bridge, Lot 5, Con. 8, Papineau	"	600 00
Boom Creek Bridge, Lot 15, Con. 12, Papineau	"	300 00
L'Amable Creek Bridge, Lot 20, Con. 9, Sabine	"	986 00

CONCRETE BRIDGES

Calvin Township Bridges

Beckett Bridge.—This bridge is a concrete trestle bridge on concrete piers. It has three spans—a centre span of 30 feet with two end spans 20 feet each. In the spring of 1923 a log jam formed at this bridge. It is supposed that explosives were used to break the jam. One of the end piers was ruined. The deck was jacked up into position and the pier reconstructed. Cost, $1,568.

Pautois Creek Bridge, Mattawa-Bonfield Road.—The old bridge at this point was destroyed by a flood caused by a log jam at the bridge. The old bridge had a span of 20 feet. The new bridge has a clear span of 30 feet with a 16-foot roadway. It is a standard concrete beam bridge on concrete abutments. The abutments are 14 feet in height to the floor level and are carried on pile foundations. The approaches were properly reconstructed. Cost, $3,537.

Passmore Bridge, Pautois Creek, Con. 5.—This bridge is built after the same plan as the Pautois Creek bridge above described, with the exception of the roadway, which is 14 feet in clear width. Cost, $2,464.

Nipissing Junction Bridge.—Located over Lavasse Creek on the Muskoka Trunk Road. A new line was adopted at this point to cut out a sharp turn in the road. The new bridge site is immediately above a fall in the creek. The channel was blasted out to the full width of the bridge to a depth of 3 feet. The bridge is a standard concrete beam structure with a clear span of 20 feet and a roadway 18 feet in clear width. The deck is 9 feet above low-water level. Cost, $1,931.

South Lavasse Bridge.—Located over the south branch of Lavasse Creek at Lot 17, Con. 11, in Ferris. A standard concrete beam bridge on concrete abutments. Roadway 14 feet in clear width. Span 20 feet clear. The abutments are 10 feet in height to floor level. The creek channel was diverted to avoid a bad turn in the old channel and the old crossing was properly filled. Total cost, $1,552. J. W. Davis was foreman in charge of all the concrete bridges in the Nipissing District.

North Bruce District

Cape Chin Bridges, Fifth Line, Lot 16, Lindsay.—A standard concrete beam bridge with a clear span of 20 feet and roadway 14 feet in clear width. The abutments are 7 feet in height to floor level. S. Cole was foreman in charge.

Fifth Line Bridge, Lot 6, Lindsay.—A standard concrete bridge with a clear span of 12 feet. The floor is a 12-inch slab reinforced with 5/8 and ¾-inch square steel bars. The roadway is 14 feet in clear width. S. Cole was foreman in charge. The cost of the two bridges was $2,750.

Crow's Creek Bridge, Lot 2, 3rd Line, Albemarle.—A standard concrete bridge with a clear span of 12 feet. Roadway 14 feet. The top is a 12-inch slab reinforced with 5/8 and ¾-inch steel bars. The abutments are 11 feet in height to the floor level. S. Cole was foreman in charge.

Crow's Creek Bridge, 10 and 11 Sideline, Con. 8, Albemarle. A standard flat top concrete bridge with a clear span of 12 feet. Roadway 14 feet clear. S. Cole was foreman in charge. The cost of these two bridges was $2,073.

Fourteenth Line Bridge, Lot 22, Keppel.—A standard concrete beam bridge with a clear span of 25 feet. Roadway 14 feet in clear width. The abutments are 10 feet 6 inches in height to the floor. S. Cole was foreman in charge.

Sixteenth Line Bridge, Keppel.—A standard concrete beam bridge with a clear span of 20 feet. Roadway 14 feet in clear width. S. Cole was foreman in charge. The cost of the two bridges was $2,901, of which the Township of Keppel paid $634.

Springstead Creek Bridge, St. Edmunds.—A standard flat-top concrete bridge with a clear span of 10 feet. Roadway 14 feet in clear width. Cost, $821. S. Cole was foreman in charge.

North Hastings District

Bay Lake Bridge, Faraday.—A long pile trestle bridge consisting of eight spans of 16 feet each. The piles are from 35 to 40 feet in length. The pile caps and stringers are flatted timber and the floor is of 3-inch tamarac plank. A strong guard rail is placed on each side of bridge and fill. Two end spans were filled in with stone, shortening the bridge 32 feet. Cost, $1,796.

Bentley Creek Bridge, Monteagle.—A timber bridge with a clear span of 30 feet, supported by a king truss. The deck is supported on double-pile piers. The approaches are filled with stone, top dressed with gravel. Cost, $722.

Eighth Con. Bridge, between Lots 2 and 3, Elzevir. A standard flat-top concrete bridge with a clear span of 10 feet. Roadway 14 feet. Cost, $680.

Highland Creek Bridge, Faraday.—A standard concrete beam bridge with a clear span of 20 feet. Roadway 14 feet in clear width. The steel purchased last season for Bartletts bridge, but not used, was placed in this bridge. Cost, $373.

Kelly Creek Bridge, Lot 17, Con. 9, Dungannon.—A timber bridge with a clear span of 20 feet. Crib abutments. Cost, $272.

Kelly Creek Bridge, Con. 3, Madoc.—A standard concrete beam bridge with a clear span of 20 feet. Roadway 14 feet in clear width. Abutments 8 feet in height to the floor level. Cost, $960.

Menzie Creek Bridge, Lot 30, Con. 14, Carlow.—A timber bridge with a clear span of 20 feet. Crib abutments. Deck of flatted cedar. The cribs are filled with stone. All timber in the bridge is first class cedar. Cost, complete, $175.

Pinners Creek Bridge, Lot 18, Con. 4, Marmora.—A timber bridge with a clear span of 20 feet. Rock-filled crib abutments. The approaches were widened and raised with rock. Cost, $440.

Russell Creek Bridge, Lots 20 and 21, Con. 2, Dungannon.—A timber bridge

with a clear span of 20 feet. Crib abutments stone filled. Deck is all of flatted cedar. Cost, $234.

St. Charles Creek Bridge, Madoc.—A standard concrete beam bridge with a clear span of 20 feet. Roadway 14 feet. Abutments 11 feet in height to floor level. Cost, $1,060.

York River Bridge, Lot 25, Con. 11, Dungannon.—This is an 80-foot steel span on concrete abutments. The east abutment is merely a concrete bridge seat on a rock bank. The west abutment is 12 feet in height from water to the floor level and extends 8 feet below the water line to reach a secure foundation. The steel span was supplied by the Sarnia Bridge Co. at a cost of $1,750. The steel was erected by P. R. Switzer. Total cost, $3,850.

All the work in North Hastings was done under the direction of Walter Wiggins, Road Inspector for this district.

Parry Sound District

Genesee Creek Bridge, Lot 9, Con. 10, Himsworth.—A standard concrete beam bridge with a clear span of 20 feet and a roadway 14 feet in clear width. The abutments are 15 feet in height to the floor level. J. R. Harrop was foreman in charge. Cost, $3,156.

Healey's Bridge, 19-20 Sideline, Con. 14, Himsworth.—Located over South River. An 80-foot steel span with concrete pile piers and approach spans of concrete beams 25 feet clear at each end. The over-all length is 139 feet. Roadway 14 feet in clear width. The centre piers consist of two rows of concrete piles 30 feet long, with an extra pile with a steel face to form a nose for the pier. A bridge seat 4 feet 3 inches wide is built up from the head of the piles. The approach spans consist of four lines of concrete beams, extending from the centre pier to a pier of concrete piles on the shore. The approaches are built up of stone, which is allowed to fall to a natural slope around the end piles. The steel span was supplied by the Sarnia Bridge Works Co. at a cost of $1,860. T. J. Paget was foreman in charge. He also erected the steel. Total cost, $6,444.

Katrine Bridge, Lot 9, 3rd Line, Armour.—Located over the south branch of the Magnetawan River at Katrine. The structure is a concrete trestle on concrete piles, comprising three spans of 30 feet each. Over-all length is 96 feet Roadway is 14 feet in clear width. Heavy stone fills are placed at each end. T. J. Paget was foreman in charge. Cost, $4,543.

Magnetawan Swing Bridge.—Located over the Magnetawan River in the Village of Magnetawan. A steel structure on concrete foundations. The swing span consists of equal arms each 60 feet in length, with a roadway 14 feet in clear width and a sidewalk 5 feet wide on one side. The steel was supplied by the Hamilton Bridge Works at a cost of $6,600 and was erected by the Department. The old pivot or centre pier was a rock-filled crib 16 feet square. The old crib was emptied to rock bottom. The top timbers were removed to the low water level and the crib was filled with concrete. Above the low-water line the concrete pier is 16 feet square, with a cut-water on the upstream face. Above the high-water level the pier is round, 16 feet in diameter. The rest piers or abutments on the shore are of concrete and are 5 feet in height. Concrete floors are in place on bridge and sidewalk. T. J. Paget was foreman in charge. The work was all done during the winter of 1923-24 and was completed before the opening of navigation. Total cost, $17,089.

Other bridges are under way—in the Town of Parry Sound, at Broadbent, Squaw Lake, Sterling Falls and the Joly-Laurier townline.

Renfrew District

A number of timber bridges were built in North and South Renfrew under the direction of H. N. Moss, Road Inspector. The names and locations of these are as follows:

Eighth Con. Bridge, Lot 16, Richards	$350 00
Goddin Creek Bridge, Griffiths	239 00
Hanrahan Creek Bridge, Con. 13, Brougham	210 00
Lake Dore Upper Bridge, Wilberforce	884 00
Lake Dore Lower Bridge, Wilberforce	233 00
Rivers Creek Bridge, Hagarty	513 00
Robertson Creek Bridge, Radcliffe	260 00
Rolph Township Bridge (concrete)	601 00
Sack Creek Bridge, Wilberforce	200 00
Silver Creek Bridge, Lot 6, Con. 16, Brudenell	452 00
Third Con. Bridge and fill, Lot 4, Stafford	2,015 00
Wilno Creek Bridge, Lot 6, Con. 11, Sherwood	433 00
Windle Creek Bridge, Lot 10, Con. 16, Brudenell	709 00

Concrete Bridges

Barry's Bay Culvert.—A concrete box culvert 6 feet wide and 5 feet high, inside measurements. The culvert has a 12-inch floor and is well reinforced. The length is 40 feet. The fill over the top of the culvert is 10 feet in height. The culvert was built under the direction of H. N. Moss, Road Inspector. Cost, $1,210.

Mount St. Patrick Bridge.—Located over Constaw Creek in the Village of Mount St. Patrick in the Township of Brougham. A concrete beam bridge with a clear span of 40 feet. The abutments are 13 feet in height to the floor level. The deck consists of a 16-foot roadway and a sidewalk raised 6 inches above the floor. Two main girders, 6 feet deep and from 12 to 16 inches wide, carry the floor system. Two main floor beams, 12 inches wide and 18 inches deep, carry the longitudinal floor beams, three lines, which are 12 inches wide and 12 inches in depth. The floor is a concrete slab, reinforced with 5/8-inch square deformed steel bars. The structure throughout is heavily reinforced. Heavy stone fills are placed at each end of the bridge. J. W. Davis was foreman in charge. Total cost, $3,460.

Sturgeon Falls District

Two large steel bridges on which work was commenced in 1923 were completed this season and opened to traffic in the early spring:

Desaulniers Bridge.—Located over the Sturgeon River at the Village of Desaulniers in the Township of Gibbons. The old timber bridge at this point had three spans of 60 feet each, with pile piers sheeted with plank. These piers could not stand the ice pressure. It was decided to provide an open channel. The new bridge has a single span of 189 feet centre to centre of bearings. The roadway is 16 feet in clear width. The abutments are of mass concrete and are 10 feet wide at the bottom and rest on piles. Fifty-eight piles were driven for each abutment. The abutments are 22 feet 6 inches in height from the pile base to the floor level. Rock fills are placed behind each abutment. The floor is a concrete slab 6 inches thick, reinforced with steelcrete. The steel was supplied by the Hamilton Bridge Works Co. at a contract price of $9,000. The

steel was erected by S. W. Butt, the foreman in charge of construction. The total cost of the bridge was $19,827.

Veuve River Bridge, on 2 and 3 Sideline, Con. "A," Caldwell.—This is a new structure. It consists of two steel spans of 96 feet each on concrete foundations. The roadway is 14 feet in clear width. The centre pier is on a rock bottom. It consists of a rock-filled crib to low-water level, with a concrete pier built up from the top of the crib. The crib is built of heavy timber, is 22 feet long, 10 feet wide, and is provided with a cut-water, on which is placed a steel noseplate. The concrete pier is 6 feet wide at the bottom and 4 feet wide at the top, and is 10 feet in height. It is also provided with a cut-water with a steel noseplate. The south abutment is built on a rock bottom and the north abutment rests on a pile foundation. These abutments are 23 and 18 feet in height from foundation to floor level. A heavy fill was required for each approach. These are built up of earth and rock. The floor is a concrete slab reinforced with steelcrete. The steel was supplied by the Sarnia Bridge Co. at a cost of $4,765 and was erected by S. W. Butt, Public Works foreman. All other work in connection with the structure was done under the direction of Public Works foreman Nathan Swain. Total cost, $14,197.

Storage Dams

During the season four storage dams were constructed on the upper waters of the Big East and Oxtongue Rivers for the conservation of water for the purpose of navigation on the Huntsville and Lake of Bays waters. The descriptions of these dams are as follows:

Island Lake Dam.—Located at Lot 34, in the 3rd Con. of the Township of Hunter, at the lower end of Island Lake, on the upper waters of the Oxtongue River. This dam is located lower down stream than the old lumberman's dam that formerly controlled this lake. The dam is constructed of rubble masonry and concrete. The deck is of pine plank. Steel chaces are provided for the stop logs. The dam is provided with a worm-gear winch. It is constructed to hold a head of 9 feet of water over the sill. The new level will be about 2 feet higher than the level of water maintained by the old dam. The main piers in the dam are 5 feet wide, 22 feet long at the bottom and 18 feet long at the top. The height to the lower side of the timber deck is 15 feet. The sluiceway provided is 10 feet in width.

The total length of the dam is 110 feet. The wing walls between the piers and shore are 90 feet long, 50 feet at one end and 40 feet at the other. These walls are 2 feet lower than the piers. The walls are 3 feet wide on top, with a batter of 1 in 3 on the back. They are provided with buttresses to resist the ice pressure during the winter. The lake has not been filled since the dam was finished and no definite height has yet been fixed for the summer level. The full cost of this dam was $3,312.

Camp Lake Dam.—Located on Lot 12, in the 6th Con. of Finlayson, on the upper waters of the Big East River, one of the main feeders of the Muskoka Lakes. It is constructed of rubble masonry set in cement mortar. It consists of a main dam 70 feet long and a wing dam 65 feet long. The main dam has two main piers 5 feet wide, 18 feet long at the top and 22 feet long at the bottom. The top of sill is 2 feet above the bottom of the creek. It will control a head of water 9 feet above the top of sill. The wing walls outside the main piers and the wing dam, which run from 3 to 9 feet in height, are 3 feet wide on top, battered 1 in 3 on each face. The deck is of timber. Steel chaces are provided for the stop logs. A worm-gear winch is supplied for handling the stop logs. Cost, $4,271.

Moose Lake Dam.—Located at the outlet of Moose Lake on Lot 21, Con. 1, in the Township of McCraney, in Algonquin Park. This dam is on the head waters of the Big East River. It replaces an old lumberman's dam. It is constructed of rubble masonry set in cement mortar. It is 65 feet long from bank to bank. The main piers are 4 feet wide and 20 feet long and 20 feet high. The opening for stop logs is 12 feet in clear width. It will control a head of 17 feet of water over the sill. The wing walls are 22 feet long at each side of the piers. These walls are 3 feet wide on top, 6 feet wide at the bottom and each is supported by a heavy buttress. The deck is of timber. Steel chaces are supplied for the stop logs. A worm-gear winch is supplied for handling the stop logs. Cost, $4,650.

Tasso Lake Dam.—This dam is located at the north end of Lot 12 in the 8th Con. of Finlayson, at the outlet of Tasso Lake. The work consisted of rebuilding an old lumberman's dam. The old structure was torn down to the foundations where the timber was sound. The dam was reconstructed in timber and filled with stone. The structure is 220 feet long and 10 feet in height at the channel. The old sill level is lowered about 2 feet and the dam built up to the original height. It will control a head of 9 feet of water. The stop-log sluice is 12 feet wide. The face of the dam is double sheeted with 3-inch plank. Cost, $4,250.

From our experience with this work, it was found that masonry dams may be constructed as cheaply as timber dams, and if good cement mortar is used in the masonry this class of work gives promise of a long service.

Wm. Lowe was supervising foreman on the construction of the four dams described.

The work in Nipissing District was done under the direction of O. Rochefort, road inspector, at a cost of $2,494.

Parry Sound District Drainage

Carling Township.—A rock ledge in the Shebeshekong River, on Lot 31, Con. 8, held back the water and caused the flooding of a large area of arable land. Three hundred and fifty cubic yards of rock were blasted and removed. leaving a free open channel.

A rock outcrop 90 feet in length was removed from a creek on Lot 33, Con. 7, in this township, completing a work started last year.

Nipissing Township.—A drain 160 rods long was opened up west from the 5th and 6th side road, Con. 17. The drain has a mean width of 6 feet and is from 2 to 5 feet in depth. The creek east of the road was cleaned out for a distance of 160 rods. This work in Parry Sound was done under the direction of John Orr. $1,507 of the drainage appropriation was expended in this district.

Muskoka Drainage

Chaffey Township.—A drain 160 rods in length was opened up to drain a low section of the Chaffey-Stisted town line. A considerable quantity of rock was blasted from the drain.

Draper Township.—An outlet 33 rods in length was opened up to drain a section of the Draper-Ryde town line.

Medora Township.—A creek 1 mile in length was cleaned out across Lots 17, 18 and 19, Con. 4, to prevent the flooding of the road at Glen Orchard.

A small drain on Lot 27, Con. 2, was opened up and some rock blasting done to relieve a flooded section of the Port Carling Road.

Monck Township.—A drain 240 rods in length was opened up on Lot 5, Con. 7, to drain a low section of the seventh line.

Muskoka Township.—A drain half a mile long was opened up on Lots 12, 13 and 14, Con. 11, to drain a section of the road leading to Stephen's Bay.

A drain half a mile in length was opened up on Lots 9 and 10, Con. 3, Muskoka, to drain a low section of the Doe Lake road.

Oakley Township.—A drain 80 rods long was constructed on Lot 11, Con. 5, to drain a flooded section of the highway.

Stephenson Township.—A drain 1 mile long was opened up at Lots 24 and 25, on the Stephenson town line and 40 rods of creek cleaned out to relieve a flooded section of road.

$2,414 was expended on the drainage work in Muskoka, which was done under the direction of Wm. Lowe, Public Works foreman.

East Simcoe Drainage

The following drains were opened up in East Simcoe under the direction of C. H. Jermey, road inspector:

Matchedash Township at Lot 14, Con. 1, 40 rods.
Matchedash Township at Lot 9, Con. 5, rock cut.
Medonte Township at Lot 16 to 20, Con. 12, 125 rods.
Orillia Township, clearing Perbrook Creek, 170 rods.
Orillia Township at Lots 19 and 20, Con. 7, 54 rods.
Oro Township, 15 and 16 side road, Con. 11, 24 rods.
Tay Township at Lots 86 and 87, Con. 1, 100 rods.

Logs and driftwood were removed from Hog Creek on Lots 5, 6 and 7 in the 4th Con. of Tay. $1,000 was expended on the drainage work in East Simcoe.

North Bruce Drainage

The following drains were opened up in North Bruce, under the direction of Jas. Weaver, road inspector:

Amabel Township on 15 side road, Con. 10, 160 rods.
Amabel Township, creek on Lots 14 and 15, Con. 10, 170 rods.
Lindsay Township on Lot 34, Con. 1, 160 rods.
Lindsay Township on Lot 41, Con. 5, 75 rods.

Albemarle Township.—Crow's Creek was cleared of logs, brush and rubbish, through the 3rd, 4th and 5th and 7th Concession, a distance of 3 miles.

$1,497 was expended on drainage work in this district.

North Grey Drainage

Keppel Township.—A drain was commenced at the rear of the 13th Concession and ran south on the line between Lots 32 and 33, 155 rods to a creek. Work was continued east along the creek 278 rods to the Indian River. The creek was cleared of logs, brush and rubbish, providing a good outlet for the drain. $1,413 was expended on this work, which was done under the direction of Jas. Weaver, road inspector.

North Ontario Drainage

Mara Township, Anderson Drain.—This drain was opened up from the C.P.R. at the line between Lots 28 and 29, south-west along a watercourse, 650 rods to Lake Simcoe. It drains the eleventh line and the county road.

Duff Drain.—This work consisted of cleaning out 145 rods of a ditch on Lot 24, in the 13th Con.

Mulvihill Drain.—On this work, 255 rods of creek were cleaned out on Lots 24 and 25 in the 7th Con. and 240 rods of ditching were done on Lots 22 and 23.

Rama Township, McDonald-Duffy Drain.—This work is the extension of work done last year. The season's work consisted of clearing a right-of-way

from the read of Con. "E" south on the road between Lots 5 and 6, a distance of 180 rods. The clearing was continued south-west on the course of the creek a distance of 100 rods on Lots 3 and 4, Con. "D." It is proposed to open up the drain next season.

John Cleveley Drain.—This work consisted of clearing out a watercourse from Head River southwest through Lots 7 and 8, in Cons. "F" and "E," a distance of 325 rods.

The expenditure on drainage work in North Ontario amounted to $1,500.

North Hastings Drainage

Carlow Drain, May Swamp.—This drain commences near the centre of Con. 7, Carlow, on west side of the 20 side road. It runs north on west side of the road 2,700 feet to a watercourse, thence northeast on the watercourse 3,400 feet to York River. It provides efficient drainage for a large area of swamp land, besides the drainage of the highway.

Faraday Drains.—A ditch 50 rods long was opened up on Lot 6, Con. 8, to drain a low section of road. A drain 70 rods long was opened up on Lot 14, Con. 11. to provide drainage for a low section of road.

Seymour-Rawdon Town Line Drain.—Owing to lack of proper drainage, the northern part of the town line between Seymour and Rawdon has not been opened to traffic. The lack of drainage is due to an outcrop of rock on the natural outlet. The proposed work commences at the north line of these townships and runs south along the town line a distance of 1,575 feet to a watercourse. Thence southwest along the watercourse a distance of 3,725 feet to a point where a good outlet is secured. The drain has a bottom width of 3 feet. Side slopes 1 to 1, with depth of cut ranging from 1½ to 4 feet. The heaviest part of the work was rock blasting where a depth of 3 feet was removed to provide a channel. $2,552 was expended on the work and it will require about $400 to complete the work as originally designed. All the drainage work in Hastings was done under the direction of Walter Wiggins, road inspector.

Renfrew Drainage

Calabogie Drain.—Lot 18, Con. 10, Bagot. This work consists of 250 feet of covered drain and 200 feet of open drain, to drain a swamp and a bad section of road.

Grattan Drain.—Lots 8 and 9, Con. 6. Located on the Caldwell-Dacre road. The drain is 1 mile long and runs from 2 to 4 feet in depth. It drains a very bad section of road and also provides an outlet for the water from a large section of low land.

Krantz Drain.—Lot 27, Con. 7, North Algona. This work consisted in constructing a covered drain through a gravel hill to drain a low section of road and a large area of swamp. Part of the excavation was 16 feet in depth. The tile were of concrete, 18 inches in diameter, and were moulded on the site with a tile mould. This work has been under way for 3 years and was completed this season.

Stafford Drain.—Con. 3. This work consisted in opening up a drain on the road between Lots 9 and 10, in the 3rd Con., to drain a low section of road. The drain is 50 rods long and from 3 to 5 feet in depth. A covered culvert was placed across the side road at the county highway.

Wilberforce Drain.—A short section of drain was constructed at Lot 7, on the 6th line, to drain a low section of road.

A tile drain of 6-inch tile, 1,200 feet long, was constructed on Lot 10, in the 14th Con. of Wilberforce, to drain a low section of road. This drain is from 3 to 6 feet in depth.

$2,500 was expended on drainage work in Renfrew, done under the direction of H. N. Moss, road inspector.

DRAINAGE AID GRANTS IN 1924, UNDER SPECIAL VOTES BY THE LEGISLATURE

Grey's Creek Extension Drain in the Township of Osgoode

This drain was constructed under the provisions of the Municipal Drainage Act and under the report of F. Stedwell, civil engineer. The report was adopted on August 6th, 1918, under By-law No. 6, 1918, of the Township of Osgoode.

The drainage work commences at the front of Lot 18, in the 4th Con. of Osgoode and extends easterly along the course of Grey's Creek to the rear of Lot 22, in the 5th Con., a distance of 16,415 feet, practically 3 miles. Near the front of the 5th Con., two branch drains extending to the north are constructed. The Casserly branch extends to the 12–13 side line, a distance of 4,437 feet. The head line branch extends to Lot 11, a distance of 6,774 feet. Total length of main and branch drains, 27,624 feet. The main drain has a bottom width of 6 feet, side slopes 1 to 1, with depth ranging from 4½ to 8½ feet. In the head line branch, the bottom width is 2½ feet, side slopes 1 to 1, with depth ranging from 3½ to 5 feet. In the Casserly branch, the bottom width is 1 foot, side slopes 1¼ to 1, with depth ranging from 3 to 5 feet.

The drainage area affected comprises 11,266 acres, of which 1,600 acres are now unfit for cultivation and will be reclaimed. The estimated cost of the work was $12,350, which was assessed against lands and roads in Osgoode.

Great difficulty was experienced in getting the work completed. Though started in 1918, the contract was not completed until late in the fall of 1923.

The drain was examined by Mr. J. S. Leitch, assistant engineer of this Department, who reports the work completed in a satisfactory manner. The final cost of the drain under By-law No. 6, as reported by the treasurer of the township, is $20,282.22. At the last session of the Legislature, a grant of $3,600 was voted to the Grey's Creek extension, Osgoode. On report, the grant of $3,600 was paid to the Township of Osgoode.

Judge's Creek Rock Cut, Eastnor

In 1922, the Township of Eastnor expended $4,000 on this work. In October, 1923, a grant of $1,000 was paid to the Township of Eastnor, as part of the cost of the work done in 1922, leaving an unpaid balance of $3,000 due on the work.

Judge's Creek is an important drainage outlet in the southeast part of the Township of Eastnor. In 1901, this creek was opened up under the Municipal Drainage Act, from Lot 3, Con. 1, north and east to Lot 18, Con. 6. At the lower end of the drain, two outcrops of rock in the bottom of the creek were encountered. The mistake was then made in making the rock cuts wide and shallow. The rock cut was made 30 feet wide and from 2 to 3 feet in depth. As there is a pitch-off just below the rock cut, the cut should have been made deep and narrow. The same amount of excavating would then have given double the capacity in outlet.

The work done by the Department of Public Works is located on Lots 16 and 18, Cons. 5 and 6. The lower rock cut on Lot 18 is 900 feet long, from 15 to 18 feet wide, and 3 feet in depth below the cut made in 1901. The upper rock cut is about 1 mile up stream, located on Lot 16, Con. 5. The cut is from 16 to 18 feet in width and from 3 to 4 feet in depth below the bottom of the former cut. The deepening of these rock cuts has greatly improved the outlet. The township is now improving the creek up stream from the rock cut at an estimated cost of $7,473.37.

On report the grant of $3,000 was paid to the Township of Eastnor. The total contribution on the part of the Province to this rock cut at the outlet of Judge's Creek in the years 1922, 1923 and 1924 was $8,485.64.

DRAINAGE AID GRANTS IN 1924, UNDER THE PROVISIONS OF "THE PROVINCIAL AID TO DRAINAGE ACT, 1921"

Boyle Drain and South Maitland Improvement in the Township of Elma and Grey, in North Perth.

This drainage work, under the provisions of the Municipal Drainage Act, was constructed by the Township of Elma, under the provisions of By-law 757 and according to plans, etc., prepared by John Roger, O.L.S. and C.E.

The engineer's report was adopted by the council of Elma on February 11th, 1922, and the petition for aid was filed in the Department of Public Works on July 12th, 1922.

The drainage scheme consists of the main drain and two small branches. The cost of the branches, $2,795.96, is not included in the expenditure on which the grant is based. The main drain commences at the centre of the 14th Con. of Elma, at the town line between Elma and Mornington, and extends west and north across the Township of Elma and west into the Township of Grey, to the junction of the north and south branches of the Maitland River, at the west line of Lot 32, Con. 8, in the Township of Grey. Throughout its course, the drain follows the general course of the south branch of the Maitland River. The total length is 80,680 feet, or 15¼ miles. The drainage area extends east into Mornington, a further distance of 3½ miles. This drain was originally constructed in 1894 and it was again improved in 1908. The clearing and drainage of lands overtaxed the capacity of the old drain and rendered the present improvements necessary. The drain provides an outlet for 19 municipal drains as well as a large number of award drains.

The bottom width varies from 5 feet at the head of the drain to 24 feet at the outlet. The depth varies according to the contour of the ground. It is 5 feet at the head and runs from 3½ to 10 feet on different sections. The drainage area comprises 53,400 acres, situated in 6 different municipalities. The estimated cost of the work was $84,410.65, which was assessed by the engineer as follows:

On lands and roads in	Elma	$58,436	55
" "	Grey	873	20
" "	Mornington	17,836	10
" "	Ellice	5,072	10
" "	Logan	1,610	30
" "	Milverton	582	40

I examined the drain in October, 1924, and found the entire work completed in a particularly satisfactory manner.

This drain is a trunk channel within the meaning of section 3 of the Provincial Aid to Drainage Act, 1921, and is entitled to aid under the provisions of said Act.

The cost of the trunk channel, including a pro-rata share of the incidental expenses, was $70,007.72.

On report, a grant of $14,001 was paid to the Township of Elma.

Canada Company Drain, in the Township of Bosanquet in East Lambton

This drain was constructed under the provisions of the Municipal Drainage Act under By-law No. 1008 of the Township of Bosanquet and according to the report of Geo. A. McCubbin, O.L.S. and C.E.

The engineer's report was adopted on June 17th, 1922. The petition for aid was filed in this Department on January 9th, 1923. This is one of the most effective of the many drainage schemes carried to a successful conclusion in Western Ontario. The drainage area affected lies immediately south of Grand Bend. It comprises the northeast part of Bosanquet; the southwest part of Stephen; the west part of McGillivray and the northwest part of West Williams, some 19,000 acres in all. The Aux Sables River runs through this area directly north to Grand Bend; there, though within 300 feet of Lake Huron, it turns and runs southwest, near and parallel with the lake shore, entering the lake at Port Frank about 10 miles from Grand Bend. High sand ridges on both sides of the river separate the swamp from the lake.

In 1870, the Canada Company, which owned the greater part of this area, attempted to drain it by cutting a canal through the south part of the swamp and through the sand ridge at the southwest corner of the swamp, joining the river near Port Frank. The cut through the ridge was nearly 40 feet deep. This gave a measure of relief, but was far from effective drainage. Later on, a cut was made direct to the lake at Grand Bend. This cut was also effective, but the flooding of the swamp continued and thousands of acres of good arable land remained unproductive.

In 1922 the present scheme was launched. It consists of an enlargement of the original Canada Company Canal. The work starts at the Aux Sables River on Lot 33, in the lake shore range, and runs southeast through the swamp, tapping the Aux Sables River about 8 miles south of Grand Bend. At the outlet the bottom of the drain is 5 feet below lake level. This grade is carried east 2 miles. In the next 2 miles there is a fall of 6 feet in the drain. The drain has a bottom width of 50 feet with each side slope 1 to 1. The bottom of the old drain was very irregular in grade, certain sections being below the present grade, while other sections required to be deepened 10 feet. Through the sand ridge, the excavation was from 15 to 25 feet in depth. West of the ridge the cut is from 7 to 10 feet deep, and east of the ridge the cut averages about 16 feet in depth. The estimated quantity of excavation was 334,400 cubic yards, sand and gravel at the west end and clay at the east end. The total estimated cost of the drain was $59,000 which was assessed by the engineer as follows:

Against lands and roads in	Bosanquet.....	$43,905 00
" " "	Stephen.....	2,170 00
" " "	McGillivray.....	12,505 00
" " "	West Williams.....	420 00

I examined the drain on July 29th, 1924, and found the work fully completed and the drain working to the entire satisfaction of all concerned. A large industry is developing in this swamp, in the growing of celery for which the climate and soil are particularly favourable.

The complete cost of the drain as reported by the township treasurer is $61,540.

On report a grant of $12,308 was paid to the Township of Bosanquet.

East Black Creek Drains, in the Township of Ellice in North Perth

This drainage work was constructed by the Township of Ellice, under the provisions of the Municipal Drainage Act and under the authority of By-law 668, and according to the report of John Roger, O.L.S. and C.E. The engineer's report on the drain was adopted by the council of the Township of Ellice on the 13th day of July, 1922. The petition for aid was filed in the Department of Public Works on April 24th, 1923.

The work comprises the deepening, widening and straightening of drains originally constructed in 1876. The drain furnishes an outlet for a large area of flat land and a number of municipal and award drains. The drainage area comprises some 16,042 acres. The work consists of the main drain and three branches. Branch No. 3 is a small lateral drain, the cost of which is not included in the expenditure on which the grant is based.

The main drain commences at the line between Lots 2 and 3, in Con. 13 of Ellice and continues south and west along the valley of Black Creek to the front of Lot 2, in the 2nd Con. of Ellice, where a sufficient outlet is obtained. The length of the main drain is 60,200 feet or about 11½ miles. The bottom width is 2 feet at the head of the drain and widens gradually to 10 feet at the outlet. The depth of cut varies greatly, ranging from 3 to 9 feet. Side slopes 1 to 1 throughout.

Branch No. 1, which is a trunk channel, leaves the main drain on Lot 11, in the 6th Con. and runs east and north to the 5 and 6 side road. Thence north on the east side of the road to the front of the 10th Con. The total length is 19,200 feet, or nearly 4 miles. The bottom width is 2 feet at the head and increases to 6 feet at the outlet. The depth of cut ranges from 3½ to 11 feet. Side slopes 1 to 1 throughout. Formerly, this branch extended north through a ridge of land into the 12th Con. The depth of cut through the ridge was so excessive that it was deemed advisable to secure an outlet without crossing the ridge. The extension and outlet are embraced in Branch No. 2.

Branch No. 2 commences near the centre of the 12th Con. on the east side of the 5 and 6 side road and extends south along the east side of this road into the north part of the 10th concession. At this point, the new outlet is provided by running west across three lots to the main drain. The length of this branch is 19,100 feet. The bottom width is 2 feet, and the depth of cut ranges from 4 to 9 feet. Side slopes 1 to 1 throughout.

The estimated cost of this work was $17,282, which was assessed by the engineer against the lands and roads affected by the drain as follows:

On lands and roads in Ellice	$14,856 75
" " North East Hope	1,849 25
On the Grand Trunk Railway	516 00

The final cost of the work, including a pro rata share of the incidental expenses (but eliminating the cost of Branch No. 3) as reported by the township treasurer, was $17,549.20.

This drainage work consists of trunk channels within the meaning of section 3 of the Provincial Aid to Drainage Act, 1921, and is entitled to aid under the provisions of said Act.

I examined the drain in October, 1924, and found the work fully completed in a satisfactory manner and the drain efficiently performing the work it was designed to do.

On report a grant of $3,509 was paid to the Township of Ellice.

Upper Portion of Grey's Creek Drain in the Township of Osgoode

This drainage work was constructed according to the report of W. H. Magwood, Civil Engineer. The engineer's report was adopted on April 1st, 1923, under By-law No. 9, 1923, of the Township of Osgoode. The petition for aid was filed in this Department on April 30th, 1923.

The drain commences at the front of Lot 18 in the 3rd Concession of Osgoode and runs east and south, near and along the course of Grey's Creek, a distance of 30,723 feet, the work under the By-law terminating at the centre of Lot 2, in the 3rd Concession. The continuation of the outlet was constructed lately under another By-law. The drainage basin comprises about 5,000 acres. Of this area, 700 acres may be classed as reclaimed swamp. The drain has a bottom width at the head of 2 feet and widens out gradually to 4 feet at the outlet. Side slopes 1¼ to 1 throughout. A considerable length of this work is new construction, as the course of the creek was too tortuous to be followed.

The drain was examined by J. S. Leitch, Assistant Engineer of this Department, who reports the work completed in a satisfactory manner. The treasurer of the Township of Osgoode reports the complete cost of this drain as authorized by By-law No. 9 of 1923, at the sum of $16,187.23.

This drain is a trunk channel within the meaning of section 3 of the Provincial Aid to Drainage Act, 1921, and is entitled to aid under the provisions of said Act.

On report a grant of $3,237 was paid to the Township of Osgoode.

Little Bear Creek Drain Improvement in the Townships of Chatham and Dover in West Kent

This drainage work was constructed under the provisions of the Municipal Drainage Act, under the authority of By-law No. 949 of the Township of Chatham and in accordance with the report of W. G. McGeorge, O.L.S. & C.E.

The petition for aid was filed with the Government on March 2nd, 1921, being before the Provincial Aid to Drainage Act, 1921, came into force. The engineer's report on the work was adopted on November 3rd, 1919.

This drain is one of the most extensive and expensive of the many large drainage schemes carried out in the Southwestern Peninsula of Ontario. The drain is 98,900 feet long, nearly 19 miles. It starts at Lot 24 in the 8th Concession of Chatham and runs southwest along Little Bear Creek, crossing the Dover-Chatham townline in the 11th Concession. Thence, it runs northwest, discharging into the Chenal Ecarte on Lot 19, in the 16th Concession of Dover. The upper end of the drain, 15,100 feet in length, was constructed with teams and scrapers. From the 18-19 sideroad to the outlet, 83,800 feet was constructed with a floating dredge. The size of the drain is as follows:

				Bottom Width	Average Depth	Side Slope
Station	0	to	8— 800'	3'	4'	1 to 1
"	8	"	79— 7,100'	4'	4' 6"	1 to 1
"	79	"	151— 7,200'	8'	5'	1 to 1
"	151	"	312—16,100'	20'	7'	1 to 1
"	312	"	406— 9,400'	25'	8'	1 to 1
"	406	"	635—22,900'	35'	9' to 16'	1 to 1
"	635	"	989—35,400'	55'	9' to 14'	1 to 1

The fall in the drain is very light, totalling 21 feet in 19 miles. The bottom grade is 8 feet below lake level at the outlet. The bottom line intersects the lake level near the 10th Concession road.

The drainage area comprises about 60,000 acres of one of the flatest plains of a like area in Western Ontario. The estimated cost of the drain was $150,266, which included an item of $15,000 for the C.W. & L.E. Railway bridge, which work was done by the railway company, and the assessment is not to be levied. The estimated cost was assessed by the engineer on the property affected as follows:

On lands and roads in Camden...	$6,992 00	
" " Dover....	22,628 00	(exclusive of railway assessment)
" " Chatham .	105,646 00	

The total expenditure on the drain, with incidental expenses, as certified by the township treasurer, was $139,167.11.

This drain is a trunk channel within the meaning of the Provincial Aid to Drainage Act, 1921.

I examined the drain, which was but lately completed, on October 10th, 1924, and found the work completed in a satisfactory manner.

On report, a grant of $27,833 was paid to the Township of Chatham.

Municipal Drain No. 1 in the Township of Mara, in the District of North Ontario

This drain was constructed under the provision of By-law No. 593 and under the report of A. G. Cavana, O.L.S., and adopted by the Municipal Council of the Township of Mara on February 20th, 1922. The petition for aid was filed in this Department on April 27th, 1922.

This drainage work consists of a common outlet and two trunk channels, known as the Main Drain and Branch "A." There is also a third branch known as Branch "B" which is eliminated from the calculation.

The main drain commences in a creek bed at the front of Lot 22 in the 8th Concession of Mara and extends north and east a distance of 21,950 feet to the front of Lot 15 in the 11th Concession of Mara.

The second drain channel known as Branch "A" joins the main drain on Lot 19 in the 8th Concession and extends east and north a distance of 11,500 feet to the front of Lot 12 in the 9th Concession of Mara. The expenditure on the main drain, as reported by the township treasurer, was $5,262.56. The expenditure on Branch "A," the other trunk channel, was $4,329, making a total expenditure on the trunk channel of $9,591.56. The cost of Branch "B" was $1,500. The incidental expenses exclusive of interest was $2,128.05. The total cost of the trunk channel, including a pro rata share of the incidental expenses amounting to $1,840.25, was $11,431.81.

The work was examined by J. W. Hackner, an engineer of this Department, in the fall of 1923, who reported the work completed in a satisfactory manner.

This drain is a trunk channel within the meaning of the Provincial Aid to Drainage Act, 1921. The expenditure on the trunk channels, including a pro rata share of incidental expenses, according to the certified statement of the treasurer of the township, amounted to $11,431.81.

On report, a grant of $2,286 was paid to the Township of Mara.

Tiny Marsh Drain in the Township of Tiny, in the District of Centre Simcoe

This drainage work was constructed under the report of Geo. A. McCubbin, O.L.S. & C.E., under the authority of By-law No. 645, adopted by the council of Tiny on the 2nd day of May, 1922. The petition for aid was filed in this Department on March 20th, 1923.

This work was designed for the drainage of a marsh area in the Township of Tiny. Part of the marsh in the 1st and 2nd Concessions of Tiny was originally a lake. The improvement of the outlet to the Wye River drained the lake but did not provide sufficient depth for complete drainage. A large area of the Township of Flos, some 3,000 acres, naturally drains into this marsh. This area is generally improved and drained, greatly increasing the flow of water into the marsh. The Township of Tiny was obliged to provide proper drainage.

The trunk channels in this scheme consist of the main drain extending from the centre of Lot 18, in Concession 2, east to Wye River, a distance of 9,600 feet. Two trunk channels branch off the main drain on Lot 17. The White branch runs south on the centre of Lot 17 to the Flos townline and east along the townline a distance of 60 rods. This branch has a total length of 7,240 feet. The Draper-Archer branch commences at the Flos townline near the centre of Lot 20, runs north 33 chains, thence east to the Archer branch at the east line of Lot 19. Thence north to the 2nd line. Thence east on the 2nd line to the White branch. The length of the Draper-Archer branch is 10,940 feet. Total length of trunk channels 27,780 feet, or about 5¼ miles.

The upper end of the main drain has a bottom width of 10 feet, depth from 5 to 6 feet. The bottom is 3½ feet below the bottom of the so-called lake. From the White branch at the centre of Lot 17, east to the Wye River, the bottom width is 12 feet, while the depth ranges from 6 to 10½ feet. The White branch has a bottom width of 3 feet from the head to the 2nd line, with depth ranging from 3½ to 6½ feet. From the junction at the 2nd line to the main drain, the bottom width is 10 feet with depth of 6 feet. The Draper-Archer branch has a bottom width at the head of 3 feet, extending north 1,000 feet, thence to the junction with the White branch the bottom width is 10 feet with depth ranging from 3 to 6 feet; side slopes are 1 to 1 throughout. The wide-bottomed drains were constructed with a floating dredge.

The drainage basin comprises 3,856 acres in Tiny and 3,035 acres in Flos. The total estimated cost of the work was $20,400, which was assessed as follows:

On lands and roads in Tiny	$14,775 00
" " Flos	5,625 00

The total cost of the work, as reported by the treasurer of the Township of Tiny, was $20,198; incidental expenses amount to 11-683/1000 per cent. of the cost of the construction.

A section of the Archer branch, 2,390 feet long, is a lateral drain, the cost of which is $684. Eliminating this section, the cost of construction of the trunk channels amounts to $17,401. The pro rata share of incidental expenses amounts to $2,033.07, making the total cost of the trunk channels $19,434.07.

The drain was examined by J. W. Hackner, an engineer of this Department, in the fall of 1923, who reports the work completed in a satisfactory manner.

On report, a grant of $3,886 was paid to the Township of Tiny.

Whirl Creek Drain in the Township of Ellice in North Perth

This drain was constructed under the provisions of the Municipal Drainage Act by the Township of Ellice, under the authority of By-law No. 673.

The work was done in accordance with the report of F. J. Ure, O.L.S. & C.E., which was adopted by the Council of Ellice on November 27th, 1922. The petition for aid was filed in the Department of Public Works on April 24th, 1923.

The drain commences at the line between Concessions 7 and 8 of Ellice, on Lot 31, and extends south and west in the valley of Whirl Creek a distance of 43,580 feet, ending on Lot 14, Concession 1, Fullarton, where a sufficient outlet is reached. The work comprises the deepening, widening and straightening of the channel of Whirl Creek. The bottom width is 10 feet at the head of the drain, and widens gradually to 24 feet at the outlet. The depth varies greatly in different sections of the creek, ranging from 1½ to 6 feet.

The estimated cost of the work was $24,566, which was assessed by the engineer as follows:

On lands and roads in	Ellice	$19,688	35
" "	Logan	3,557	35
" "	Fullarton	446	15
" "	Mornington	874	15

The actual cost of the work, including all incidental expenses, as reported by the statement of the township treasurer, was $22,702.69.

I examined the drain in October, 1924, and found the work fully completed and in a satisfactory manner.

This drainage work is a trunk channel within the meaning of section 3 of the Provincial Aid to Drainage Act, 1921, and is entitled to aid under the provisions of said Act.

On report, a grant of $4,540 was paid to the Township of Ellice.

A. J. Halford,
Engineer Public Works.

Toronto, October 31st, 1924.

Eighteenth Annual Report

OF THE

GAME AND FISHERIES DEPARTMENT

1924

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

TORONTO
Printed and Published by Clarkson W. James, Printer to the King's Most Excellent Majesty
1925

To His Honour HENRY COCKSHUTT, ESQ.,

Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

I have the honour to submit herewith, for the information of Your Honour and the Legislative Assembly, the Eighteenth Annual Report of the Game and Fisheries Department of this Province.

I have the honour to be

Your Honour's most obedient servant,

CHARLES McCREA,
Minister of Mines.

Toronto, 1925.

EIGHTEENTH ANNUAL REPORT

OF THE

Game and Fisheries Department of Ontario

To the Honourable Charles McCrea,
Minister of Mines.

Sir:—I have the honour to place before you the Eighteenth Annual Report of the work of the Game and Fisheries Department for the fiscal year ending the 31st day of October, 1924. A gross revenue of $667,227.96 was received, while the expenditures totalled $336,826.96, so that a surplus of $330,401 was obtained.

Comparative Statement of Revenue and Expenditure, 1916-1924 Inc., as Shown in the Public Account.

	Revenue	Expenditure	Surplus
1916	$174,186 71	$157,681 94	$16,504 77
1917	219,442 94	154,055 17	65,387 77
1918	258,671 62	167,795 22	90,876 40
1919	346,197 14	185,247 72	160,949 42
1920	466,550 86	239,978 13	226,572 73
1921	612,972 86	287,608 87	325,363 99
1922	737,519 65	347,352 00	390,167 65
1923	621,148 08	391,422 19	229,725 89
1924	667,227 96	336,826 96	330,401 00

It will be noted that the revenue was increased over the previous year by $46,079.88, while the expenditure was decreased by $54,595.23, thereby increasing the surplus of the previous year by $100,675.11.

For comparative purposes, I beg to show separately the revenue received from Game and Fish for the past two years.

	1923	1924	
Revenue from game	$383,477 09	$372,142 54	$11,334 55—Dec.
Revenue from fish	237,670 99	295,085 42	57,414 43—Inc.

It will be noted from the detailed revenue statement published elsewhere in this report that while there has been an increase in the revenue from commercial fishing, yet a decided increase in revenue has been received from the sale of angling licenses, as the receipts from this source now show the sum of $105,862.50.

Statistics

The statistics accompanying this report will show in detail the kinds, quantities and values of commercial fish taken, also the varieties, quantities and locations of fry and fingerlings distributed from Provincial Hatcheries, together with other statistics pertaining to the fur trade, as well as other branches of the Department. All of which has been carefully prepared and affords interesting and valuable information.

Fish

The statistics of the commercial fisheries of the Province are shown in comparison as follows:—

	1922	1923	1924
Gill nets licensed (yards)	6,239,582	6,018,801	6,502,736
Seines "	186	172	208
Pound nets "	1,285	1,265	1,323
Hoop " "	1,282	1,263	1,256
Dip and roll nets licensed	59	36	70
Spears "	151	125	126
Hooks "	85,865	71,336	78,685
Number of men employed	4,003	3,742	4,267
Number of tugs	101	100	103
Number of gasoline boats	946	894	975
Number of sail or row boats	1,181	1,080	1,177
Value of boats, ice-houses, wharves, and twine	$3,352,410 00	$2,807,368 00	$2,995,362 00
Aggregate catch in pounds	38,022,017	38,594,682	41,732,664
Value to fishermen	$2,807,525 21	$2,886,398 76	$3,139,279 03

Angling

While the fee for non-resident angling licenses remains the same, the revenue has shown a decided increase over any former year, as will be shown by the following comparisons:—

	1922	1923	1924
Revenue from Angling Licenses	$63,132 00	$77,856 75	$105,862 50

Although game fishing is reported as good in various parts of the Province, it can be readily seen that the yearly toll is fast increasing and places a demand on the hatcheries that will require the maximum production to maintain a supply that will satisfy the steadily increasing resident and non-resident anglers.

Hatcheries

Elsewhere in this report will be found in detail the quantities and varieties of fry and fingerlings placed in various waters of the Province from hatcheries located at Mount Pleasant, Glenora, Sault Ste. Marie, Normandale, Port Carling, Port Arthur and Fort Frances, and for comparative purposes with the previous year, the following figures show a summary of total distributions:—

	1923	1924
Whitefish Fry	264,400,000	437,469,000
Pickerel Fry	36,140,000	80,250,000
Salmon Trout Fingerlings and Fry	12,410,100	7,801,000
Herring Fry	24,000,000	32,475,000
Rainbow Trout Fry	1,100	15,000
Speckled Trout Fingerlings and Fry	2,328,800	1,898,500
Black Bass Fingerlings and Fry	785,000	338,000
Parent Black Bass	997	1,111
	340,065,997	560,247,611

The demand from the public for a supply of fry and fingerlings is very great, and the demand for game fish is much greater than the supply, although every effort is being made to improve conditions, and I would draw your attention to the rapid growth of work done by the Provincial Hatcheries. In the year 1912, only 150,000 fry were distributed, and in 1918, 58,356,631 fry were planted, while during 1924, 560,247,611 fry were placed in public waters.

Game Sanctuaries

The propagation of English Ring-necked Pheasants is still being carried on at the Eugenia Crown Game Preserve with considerable success, and the public interest is increasing in this undertaking. Aside from the hundreds of pheasants reared on the preserve over 17,000 eggs were placed with farmers and sportsmen for hatching purposes during the year, and from reports received these game birds can be successfully bred in all parts of the Province, including the most westerly districts of Kenora, Rainy River and Thunder Bay.

In order to meet a demand for further game sanctuaries of considerable size, there has been created the Superior Game Sanctuary which includes islands and mainland between Port Arthur and Schreiber along the north shore of Lake Superior. This territory possesses considerable large game and fur-bearing animals and with proper control and destruction of vermin, should prove of value to that district. I am of the opinion that another large sanctuary should be established in the middle of the north-west part of the Province in view of the decrease in certain fur-bearing animals and owing to the ever increasing number of sportsmen hunting big game.

Planting of Wild Rice

The practice of planting wild rice seed in public waters in all parts of the Province has been continued with success and the demand is much greater than the supply obtainable.

Game

Deer.—No means are available to show the exact number of deer taken during the year, but from reports received deer were taken in the usual numbers.

Moose are reported as plentiful in a number of areas. The following is a comparison of big game hunting licenses issued for the past four years:—

	1921	1922	1923	1924
Resident Moose	1,989	1,584	1,098	1,385
Resident Deer	18,689	20,504	17,877	19,517
Non-resident Hunting	950	1,256	1,247	1,651

Ruffed Grouse (commonly known as partridge). In 1923 these game birds were plentiful in all suitable localities, and so far as it has been possible to ascertain the birds wintered well during the winter of 1923 and 1924, but for some unaccountable reason during the summer of 1924 the decrease in numbers of these birds was so enormous that a close season was advocated by a number of sportsmen. Many reasons for this scarcity were advanced, but the true cause will probably remain a mystery. A short open season was permitted, and with normal conditions following, these birds should become well established again.

Sharp-tailed Grouse or Prairie Hen are plentiful in the western part of the Province, and appear to be working eastward as the district of Thunder Bay is reported to have a large number.

Quail are still protected by a close season, and are to be found in larger numbers in the Counties of Kent and Essex than elsewhere.

Pheasants are protected by a close season, and are to be found in almost every county owing to the distribution of eggs by the Department from the Eugenia Crown Game Preserve. In the Counties of Lincoln and Welland these birds were so plentiful as to make it possible to provide for a one-day shoot for a limited number of male birds. This arrangement was well received by the sportsmen of the Province, and excellent shooting was enjoyed.

Ducks and Geese are plentiful in all parts of the Province, and the season was a satisfactory one to all sportsmen.

Furs

The total catch of fur-bearing animals shows an increase over the preceding year both in numbers and in value to the trapper, but the decrease in beaver taken for two successive years gives cause for some action to be taken to further preserve these animals.

Beaver.—The figures published below show the rapid decline that has taken place in the two years just past.

Otter.—Not shown to have decreased for some years.

Mink were taken in larger numbers than for some years.

Marten and Fisher are quite scarce.

Muskrat have been steady in production for some years.

Comparison of Pelts Exported and Tanned During 1921-2-3-4

	1921	1922	1923	1924
Beaver	95,479	93,971	70,684	50,233
Otter	4,759	5,309	3,997	5,096
Fisher	2,602	2,657	2,339	1,910
Marten	6,533	7,327	4,704	3,661
Mink	42,667	78,487	58,634	82,446
Muskrat	479,866	554,888	478,820	533,256
Bear	1,494	2,137	1,447	1,399
Fox (Cross)	287	469	1,154	1,082
Fox (Red)	5,282	11,272	12,329	14,695
Fox (Silver or Black)	153	87	205	167
Fox (White)	351	1,765	1,501	362
Fox (not specified)	23	170	34	28
Lynx	591	836	1,177	2,332
Raccoon	11,951	20,344	15,752	21,976
Skunk	47,121	73,219	54,770	58,130
Weasel	58,898	94,399	61,603	51,163
Wolverine	12	6	20	12
Total	762,069	947,343	769,070	827,948

In addition to the above list there were during the year 1924, 628 ranch-raised foxes that were either exported alive or the pelts exported or tanned.

The value of pelts taken during the year amounted to $3,234,946.62 to the trapper. The value of pelts produced in the entire Dominion in 1924 was $15,643,817, and Ontario's value of fur-bearing animals was higher than any other Province and exceeded the "second place" Province by over a million dollars.

Fur Farming

There still continues to be a steady increase in the issue of fur farmers' licenses, and the public are demanding information and statistics concerning this branch of the fur industry.

	1922	1923	1924
Fur farmers' licenses issued	141	284	392

Animals stocked on licensed farms:—

	1922	1923	1924
Beaver	4	2	10
Fisher	3	6	6
Fox (Cross)	270	361	386
Fox (Red)	206	323	347
Fox (Silver Black)	1,088	2,171	3,006
Lynx	2	2	2
Mink	94	73	97
Muskrat	...	163	2,904
Opossum	6	...	...
Raccoon	50	130	149
Skunk	82	46	138
Bear	...	...	11
	1,805	3,277	7,056

Enforcement of the Act

The district wardens, special patrol officers and overseers in all parts of the Province have rendered efficient service in enforcing the provisions of the Act and Regulations.

During the year two gasoline boats were purchased to patrol areas on the Great Lakes and connecting waters, and these additions filled a demand for a better water patrol service.

Summary of Convictions, Fines and Confiscations for the Year

Convictions	933
Fines collected	$14,754 10
Sale of confiscations	11,715 45

A great many articles were confiscated during the year, including:—

5,056 Pelts	13 Trap nets	1 Horse and waggon
15,880 pounds fish	42 Spears	2 Motor trucks
20,081 yards gill net	62 Rods and lines	2 Motor cars
837 pieces gill net	502 Traps	14 Deer
39 Dip nets	232 Fire-arms	54 pounds venison
15 Hoop nets	10 Gasoline boats	5 Moose
8 Seine nets	2 Scows	69 Partridge
2 Roll nets	21 Row-boats	69 Ducks
5 Pound nets	3 Canoes	67 Decoys

All confiscations are sold at advertised sales by tender, other than such articles as are sold by the Department to the former owner, when circumstances warrant.

Acknowledgments

The Department desires to thank the transportation companies who have rendered every assistance in the distribution of fry in the various waters of the Province. Appreciation is also expressed for the co-operation of officials of the federal, provincial and state governments with whom conferences have been held. The success of the year's operations has been due to the loyalty and work of all members of the staff, both on the inside service and those engaged in the field and hatchery work.

All statistics referred to will be found elsewhere in this report, together with many other statistics in detail.

All of which is respectfully submitted.

I am, Sir,

Your obedient servant,

D. McDonald,
Deputy Minister of Game and Fisheries.

REVENUE RECEIVED BY DEPARTMENT OF GAME AND FISHERIES DURING YEAR ENDING OCTOBER 31st, 1924

REPORT OF THE DEPARTMENT OF LABOUR

To His Honour Henry Cockshutt,
Lieutenant-Governor of the Province of Ontario.

I beg to submit herewith for your consideration the Fifth Annual Report of the Department of Labour for the year 1924.

Respectfully submitted,

Forbes Godfrey,
Minister of Labour.

Hon. Dr. Forbes Godfrey,
Minister of Public Health and Labour.

Sir:

In presenting the fifth annual report of the various administrative divisions of the Department of Labour a brief survey of industrial conditions in the Province may be of interest.

Employment

The volume of employment in Ontario during the fiscal year 1924 was smaller than that of the previous year but correspondingly greater than that for the fiscal period 1922, according to the index numbers issued by the Dominion Bureau of Statistics, covering approximately 2,700 firms of the Province whose staffs averaged 318,460. The index number for January, 1920, is taken as 100; for these years the numbers stood at 90.1, 93.1 and 86.4 respectively.

Manufacturing generally was quiet, a contraction being reported in employment in iron, steel, textile, lumber, pulp and paper industries. In January, Ontario recorded more pronounced gains than any other province, as shown by an increase of over 14,000 persons on the payrolls of the firms making returns. In spite of a decided increase in the volume of employment in construction amounting to an additional working force of approximately 6,700 persons during May, construction and transportation afforded less employment during the year than in 1923. Logging, mining, services and trade, however, reported a more favourable situation. The net result for the year was a decrease of three points in the volume of employment as compared with 1923.

This contraction in employment was further illustrated in the decline in the estimated cost of building work in twenty-five cities of Ontario as indicated by building permits. The total for 1924, $52,669,109, showed a decrease of $16,288,188 or of 23.6 per cent. as compared with the previous year.

Wages and Hours

In the building trades a wage increase of 25, 12½ and 10 cents per hour for bricklayers was reported in Toronto, Hamilton and Ottawa respectively. The wages for carpenters in Toronto changed from 85-90 to 80-90 cents per hour. Stonecutters' wages in Ottawa increased 15 cents per hour, and slight advances were reported for painters, plumbers and builders' labourers in Hamilton. The wages for electrical workers and plasterers remained the same in the three centres. The hours of labour in these cities were reported as unchanged for workers in the building trades.

In the metal trades no change in wages and hours was reported for Toronto, and in Hamilton the only change was in the hours for iron moulders when the working week, which had been 45-48 hours, became 48-50 hours. Wages and hours for blacksmiths and boilermakers remained the same in Ottawa but the maximum pay for machinists dropped from 68 to 60 cents per hour and the working week from 50 to 44-50 hours. The maximum pay for iron moulders was reduced from 63 cents to 60 cents per hour and the week from 50 to 44-50 hours per week. The rate for sheet metal workers, which had been 75-85 cents per hour, was increased to 80-88 cents per hour.

In the printing trades both wages and hours remained unchanged during the year in all three centres.

In the electrical street railway group no change was reported for Toronto and Hamilton. In Ottawa the wages for conductors, motormen, linemen, shedmen and electricians increased one cent per hour and the hours per week remained unchanged.

Industrial Unrest

During the fiscal year the number of disputes involving a stoppage of work totalled nineteen. While this was three more than during 1923, the time loss in working days showed a reduction of approximately 52 per cent., the lowest in seven years. In reporting the time loss, 95,196 working days, it must be borne in mind that there was included in this number the complete report of the strikes of postal employees and telegraphers, both of which affected workers in Montreal and other cities outside as well as cities within the Province. Twelve strikes were in protest against wages or proposed wage reductions, three against both wages and hours, three in support of the unions and one in protest against the enforcement of new regulations.

Of these nineteen disputes, four were carried over from the previous year, causing a time loss of 63,787 days or slightly over 67 per cent. of the total loss for the year. At the end of the fiscal year one dispute, that of the moulders in Guelph, involving seventeen workers, remained unterminated, and in the case of the telegraphers' strike, the men returned to work pending a final settlement before a Board of Conciliation and Investigation. Six settlements were affected in favour of employers, two in favour of employees and four by compromise. Two strikes were called off by unions, and in the case of the remaining three, time loss had ceased to be a factor. An account in detail of strikes will be found in the appendix of this report.

Steam Boiler Branch

In administering the Steam Boiler Act and enforcing the Canadian Interprovincial Regulations, which were approved by the Lieutenant-Governor in Council on the second day of March, 1922, the boiler inspectors under the chief inspector are endeavouring to provide for safety to life and property in

the use and construction of steam boilers. In order to make their work more effective, amendments to the present Steam Boiler Act have been considered, and for the discussion of these proposed amendments a conference was called in November which was attended by representatives of boiler manufacturers, boiler insurance companies and second-hand dealers.

During the year 345 drawings and specifications were surveyed, registered and reregistered and 104 designs were returned to manufacturers for correction. The new pressure vessels inspected numbered 275, and the inspections of pressure vessels repaired, sold or exchanged numbered 874. Several explosions occurred during the year, but none of the exploded vessels had been examined at any time by inspectors employed in the Steam Boiler Branch.

Stationary and Hoisting Engineers' Branch

The volume of business transacted by this Branch showed increased activity, indicating a greater desire on the part of owners of steam plants to have such plants operated by competent persons, thus making for general safety. During the year 15,817 certificates were granted, an increase in number of 853 over last year. The number of plants registered totalled 606 as compared with 187 in 1923 and the revenue of the Branch increased $2,156.71. While the majority of persons obtaining certificates by examination were graded in the fourth class, a larger percentage than last year of the candidates for examination were men holding lower grades and endeavouring to qualify for higher grade certificates.

Employment Service

The industrial situation as already outlined was reflected in the work of the twenty-five Ontario offices of the Employment Service of Canada. The number of vacancies reported to these offices, 176,512, was approximately 16 per cent. less than the number in the previous year. On the other hand, the placements, 145,298, showed a reduction of only 11 per cent., which fact would seem to indicate more effective placement work by the members of the staff of these various offices and that because of the general scarcity of work applicants were more willing to take what work was available. It is also interesting to note that 47 per cent. of the placements were for work of a casual nature, whereas the percentage of casual jobs last year was thirty-three.

Factory Inspection Branch

The report from this Branch indicates an increase in the volume of business accomplished during the year. The number of inspections made, 18,935, was 829 more than the number made in 1923, and in addition many special visits were made in delivering contract clothing permits and in making inspections of buildings at the exhibition grounds. Two hundred and seventy-two thousand nine hundred and forty-nine people were employed in the industries, mercantile establishments and office buildings covered by the above inspections. The number of accidents reported to the chief inspector decreased by one, but fifty-one of these were fatal as compared with seventy-one fatal accidents reported last year. Under the Factory, Shop and Office Building Act the members of the factory inspectorate assist in the enforcement of the Stationary and Hoisting Engineers' Act, the Steam Boiler Act, the Adolescent School Attendance Act and the Minimum Wage Act. Altogether 2,596 violations of these Acts were submitted.

Jas. H. H. Ballantyne,
Deputy Minister of Labour.

Labour Legislation, 1924

The Statutes of Ontario, 1924, include the following laws and amendments of special interest to labour:—

1. An Act to amend the Workmen's Compensation Act:—

By this Act the application of the provision in regard to non-resident dependants is restricted to dependants residing outside Canada so that in future dependants residing in other provinces of the Dominion will be paid as though residing in Ontario. Heretofore the Workmen's Compensation Act provided that full benefits were payable only to such non-resident dependants as were resident in countries, which, by reciprocal arrangements, would provide similar benefits for Ontario workmen and their dependants. The increase in compensation due to the above change is to apply to all pension payments accruing after the coming into effect of the Act, irrespective of when the accident happened, but no person is entitled to claim additional compensation for any period prior to the coming into effect of the Act.

The Act was further amended by the addition of the following section:

> 44c. To aid in getting injured men back to work and to assist in lessening or removing any handicap resulting from their injuries, the Board may take such measures and make such expenditures as it may deem necessary or expedient, and the expense thereof shall be borne, in Schedule 1 cases, out of the accident fund, and in Schedule 2 cases, by the employer individually, and may be collected in the same manner as compensation or expenses of administration; provided that the total expenditure under the provisions of this section shall not exceed $100,000 in any calendar year.

2. An Act to amend the Master and Servant Act:—

The limit of the amount of arrears of wages which a justice of the peace may order to be paid by a master or employer, on the complaint of a servant or labourer, of non-payment of wages, is, by this Act, raised to $100. By the former Act the limit was placed at $80 in provisional districts, and $40 in counties.

3. An Act to amend the Landlord and Tenant Act:—

This Act makes new provisions in regard to the lien of a landlord for rent in the case of the tenant becoming bankrupt, the preferential lien being restricted to the arrears of rent due for the three months, instead of one year, and for three months after the date of the assignment. Changes are also made relating to the rights of the assignee, of the sub-tenants and the settlement of disputes.

4. The Warehousemen's Lien Act:—

This Act gives warehousemen a lien upon goods deposited with them for storage.

5. An Act to provide for the Licensing of Sawmills and Pulp and Paper Mills:—

This Act requires that sawmills and pulp and paper mills be licensed, and enables the Minister of Lands and Forests to make regulations for the construction and operation of stationary or portable mills.

6. An Act to amend the Railway Employees and Commercial Travellers Voting Act:—

By this Act allowance is made for the extension, for such further time as may be fixed by the by-law, of the time for voting at the special polls, which may be provided on the three days preceding the annual municipal elections for railway employees and commercial travellers, whose employment is such as to necessitate their absence from their place of residence on the day of the elections.

7. An Act to amend the Elections Law:—

By this amending Act the special polls, which were provided in 1919 for railway employees, whose employment necessitates their absence from their place of residence on the day of the elections, are to remain open till 9 p.m. instead of till 5 p.m.

8. An Act to amend the Forest Fires Prevention Act:—

For the purpose of controlling or extinguishing any fire, employees of the Department of Lands and Forests for the Province of Ontario may, by this amendment, employ or summons the assistance of any male person between the ages of eighteen and sixty, excepting trainmen, telegraphers and despatchers on duty, doctors and persons physically unfit.

9. An Act to establish the Mining Court of Ontario:—

This Act provides for the establishment of a mining court to have jurisdiction in all matters arising under the Mining Act of Ontario.

10. An Act for the establishing of the Department of Health:—

By this Act provision is made for a Department of Health under a Minister of Health. This department is to be charged with the administration and enforcement of the Public Health Act and generally all the statutes relating to the protection of the health of the people of Ontario.

11. An Act to amend the School Laws:—

The main purpose of this amending Act is the equalization of the means of support of the secondary schools and the revision of the method of distributing provincial aid to elementary schools. This Act also amends the Vocational Education Act by providing that "subject to the regulations, pupils of 13 years of age and over, who have been in attendance in auxilliary training classes, or who are eligible for admission to such classes, may, with the approval of the Minister and upon an examination conducted subject to his direction, be admitted to special industrial classes established by a board for the purpose of giving vocational instruction to such pupils where it is found that they will be benefitted by it."

12. An Act respecting Medical and Dental Inspection of Pupils in Public and Separate Schools:—

This Act enables local educational boards to provide medical and dental inspection of pupils and render such other services relating to the health and general wellbeing of the pupils as may be required by regulations under the Department of Education Act.

Ontario Offices, Employment Service of Canada

General Superintendent—H. C. Hudson
Office—Spadina House, Toronto

Some four years ago the Russell Sage Foundation commenced an extensive study of employment services, public, private and philanthropic, in the United States and Canada. This report, which has recently been published in book form, emphasizes the fact that the public employment service represents the most satisfactory manner of bringing workers and work together with the minimum of expense and delay.

It would appear from the experience in Ontario during the past twelve months that this fact is becoming increasingly recognized by employers and workers. Each year the position of the employment offices becomes more firmly consolidated and the organization fits more closely into the economic and social life of the Province.

It is interesting to note that there was a difference of less than 100 in the total number of applicants registered at all the offices during the twelve months under review as compared with the previous year. There was, however, a decrease of almost 16 per cent. in the number of vacancies listed with the Service, but the placements did not show a corresponding falling off, the decrease in this case being 11.1 per cent. The difference between the two percentages indicates more effective placement work on the part of the employment office superintendents and staffs and also reflects a greater willingness on the part of applicants to accept the employment offered.

The industrial situation is reflected in the fact that the casual placements exceeded those of the previous year by 3,703, while the regular placements showed a decrease of 22,338. Employment in November and December of 1923 was at a higher point than during the previous two years. The same condition prevailed during May of 1924 when vacancies took a downward turn and by September were lower than in 1923.

In September, October and November, 1924, jobs were less plentiful than during the same months of 1922 and 1923, but the index figure did not reach the low point of 1921. The index number for employment for all Canada at the beginning of November, 1923, was 96, while the year ended up with the index standing five and one-half points lower, or at 90.5.

SUMMARY OF THE ACTIVITIES OF THE ONTARIO OFFICES OF THE EMPLOYMENT SERVICE OF CANADA, NOVEMBER 1, 1923, TO OCTOBER 31, 1924.

BELLEVILLE

In Belleville the principal industries are automobile accessories and supplies, cement, hardware, machinery, optical goods and shoe manufacturing, textiles and distilling. With the exception of one firm which closed during the year, these industries afforded permanent work, operating full time with but slight variation, although not working to capacity. Two new firms commenced operations, one of which employed unskilled female help for approximately 90 per cent. of the work and the other skilled male help. The local supply of labour was sufficient to meet the demands, and the rate of wages and hours of labour remained practically the same as the previous year. Owing to general trade conditions the placements made by the Belleville office of the Employment Service of Canada showed a reduction of 9.2 per cent. as compared with 1923.

BRANTFORD

In Brantford there was a marked development in the binder twine industry but production was curtailed in various other lines of manufacture, especially in iron, steel, lumber and its products and textiles. Ten firms which had employed approximately 650 workers closed during the year, this fact and the general slackness in other firms accounting for the surplus of labour in this locality which resulted in over 1,500 workers, chiefly skilled artisans, seeking employment elsewhere. There were but limited building activities and construction operations carried on during the year and rates of wages and hours of labour remained unchanged in these trades. The number of placements made by the Brantford office declined 26.6 per cent. as compared with the previous year, a marked decline in the demand for domestic help being reported.

Below will be found a table providing some interesting information with regard to the ages of the various applicants, who registered at the office during the year. It is noticeable that the greatest number of men registered in any one group were between twenty-one and thirty, while the largest number of women registered is found in the age group thirty-one to forty.

Ages of Applicants.

Ages	16–20	21–30	31–40	41–50	51–60	61–70	Total
Male	184	500	387	177	62	13	1,323
Female	23	43	55	35	5	..	161
Totals	207	543	442	212	67	13	1,484

The nationality of the applicants is indicated by the following table:—

Country of Birth	
Canada	796
England	443
Ireland	29
Scotland	138
Wales	3
America	3
Other countries	72
Total	1,484

Thirty-nine handicap cases applied for light employment; of this number, twenty-one were ex-service men with disabilities that called for a 10 to 60 per cent. pension. The other eighteen were made up of the aged and those injured in industry. With very few exceptions the office was able to be of some service to all in this group.

With regard to the farm placement work done during the year the superintendent reports as follows:—

> "Judging from the small number of unfilled orders on file, also the pleasing absence of complaints, one must come to the conclusion that the labour requirements of the farmer were well cared for during the past season. It is a pleasure to record that the sharp and constant demands for extra help during the rush seasons were promptly met by the factory worker laid off from his regular job. Many of the very best married citizens cheerfully accepted this class of work, and the supply of help at all times exceeded the demand."

CHATHAM

The demand made upon the Chatham office for farm workers this year exceeded the supply but a surplus of skilled mechanics and labourers was reported, many of whom obtained work in other cities. Business generally was quiet, less work was available on highway and road construction and three firms suspended operations during the year. On the other hand, the sugar company reported a very large sugar beet crop and an addition to the plant which increased the capacity 25 per cent. The office experienced no difficulty in meeting the demand for domestic workers.

COBALT

The contraction in the volume of employment on construction was due to the fact that the building of power projects, which were required to take care of the expansion in the mining industry, had been completed and as the power developments were then sufficient to take care of the requirements of mine operations with a surplus available, it seemed unlikely that further power would be developed until a decided expansion had taken place and more mining areas had been opened up. Railroad construction work was carried on between Swastika and Larder Lake and between Cobalt and South Lorrain, and highway construction was continued under the Provincial Department of Lands and Forests. A slight decrease in the rate of wages for unskilled workers in lumbering and construction was reported but the hours remained unchanged.

The employment situation in the mining industry in the Cobalt district is outlined in the following extract from the report of the superintendent:—

> "The mining industry, with 595 jobs provided during the year, being of a more or less stable character, does not show decided fluctuations, although naturally the demand is to some extent greater in the spring when prospecting and development work is opening up than at other times of the year. The number of vacancies, however, is not a criterion of expansion, as many men are engaged at the mines on personal application, of which this office does not have cognizance. This condition applies particularly to the area of Kirkland Lake, where innumerable mines are being operated and where they are easy of access to the unemployed. A study of the points from which business is secured shows that a much larger number of positions are notified from districts off the beaten path, where men are not so frequently found, than is the case where mines are situated close to the railroad. The distance from this office to several of the mining camps is in some cases considerable and the general tendency is to engage men locally rather than have them sent from any distance. There is not so extensive a turnover of labour in this industry as is found in others, living and working conditions and rates of wages paid being just a little better than is usually found in camps where the work is not of such permanent nature."

FORT WILLIAM

In Fort William the demand for labour was at its highest point during the grain rush in the autumn and at its lowest in the winter when very little building and construction was carried on and when the freight sheds, coal docks, elevators and railways in connection with navigation were closed. The Provincial Government constructed new roads and bridges in the rural districts and let out

contracts for some road gravelling during the winter and one flour mill was remodeled in order to increase production. On the other hand, a starch manufacturing firm had to suspend operations and the pulp and paper companies were working short time. The local supply of labour was more than sufficient to meet the demand for the immediate vicinity of Fort William but Winnipeg is regarded as the logical labour market for the Rainy River section of the Province. The general condition of trade throughout Ontario was reflected in the work of the employment office when the number of placements for the year decreased approximately 36 per cent. as compared with the previous year.

GUELPH

A reduction in the number of placements made was reported from the Guelph office of the Employment Service, due to depression in the building trades, a reduction in road construction and a general slackness in manufacturing. Many firms were operating on short time and there were practically no new developments in industry during the year. In the summer months, when the maximum amount of employment was provided, there was a demand for unskilled labour which could not be met by the local supply. Two strikes took place in Guelph—one of bricklayers for higher wages which was settled by compromise after lasting twelve days, and one of moulders who protested against a reduction in wages. This strike had not been terminated by the end of the year although some of the moulders had gone back to their work.

HAMILTON

The demand for help made at the Hamilton office was not so great this year as many of the factories were working short time. The decrease in the volume of employment due to the suspension of operations in several firms was not balanced by the few firms which enlarged their plants in order to increase production. Work in the building trades was slacker than it has been for several years, which resulted in a considerable exodus of skilled labour to the United States and other points within the Province. There was practically no road construction work carried on outside the city but a storm sewer was built by the municipality, thus providing work for 300 men for six days in rotation, and the Federal Government had some rebuilding of piers done at Hamilton Beach.

Two strikes for increased wages affecting bricklayers and plumbers took place during the year. The former which lasted five days resulted in compromise, and the latter which caused a time loss of 2,112 working days was settled in favour of employees. Wages in the metal and printing trades and electric street railways remained unchanged and in the building trades an increase of 12½ cents per hour for bricklayers was reported. The wages for painters changed from 65-70 to 70 cents, for plumbers from 85 to 85-90 cents and for labourers from 30-40 to 35-50 cents per hour. The only change in hours of labour was for iron moulders when the working week which had been 45-48 became 48-50. The number of placements made in the men's section of the office showed a reduction of 31.2 per cent. and in the women's section a reduction of 20.3 per cent.

Women's Section.

The work of the women's section was especially difficult during the year 1923-1924 as employment conditions were considerably below normal. At all seasons it was hard to secure work for the large number of unemployed and the

result was a decrease of 664 in the total number of placements. The most active branch was the casual work. The placements numbered 4,208, the majority of which were permanent, one or two days a week for capable workers who would earn a fair wage and would have no occasion to return to the office for employment daily.

Nine hundred and ninety domestics were placed during the year, an increase of 260 over 1923. The new arrivals did a great deal towards meeting the demand for domestics which has been greater than the supply for several years and on the whole they proved very satisfactory. Many young factory workers who were inexperienced in any other line of work registered for housework but were difficult to place because of their inexperience and because they intended to return to their trades when an opportunity arose.

There were many more applicants for factory work than vacancies registered and workers who were on short time in the textile factories were applying for part-time jobs in order to make a living wage. Attempts were made to enlarge the scope of the clerical section of the office by extensive canvassing but the results were not encouraging. Through co-operation with the Y.W.C.A. and with Neighborhood House, it was possible to fill the orders received for help on farms, the number of which was greater than last year.

KINGSTON

The principal manufacturing concerns in Kingston are: the locomotive works which, when running full time, employ 650 men; the tannery, employing from 150 to 200 men; the textile company, employing 200, the majority of whom are boys and girls; the shipbuilding company which employs up to 200 when working to capacity; the piano company about 100 men, and the biscuit company 150, many of whom are boys and girls. Early in the year the locomotive works employed 350 men, this number being reduced by one-half before further contracts were received for locomotives in April which necessitated the employment of 650 men. With the completion of these contracts the payroll had been reduced again to 100 by the end of the fiscal year. The tannery, textile and piano companies were fairly active throughout the year. Employment at the shipbuilding company was steady during the winter but spasmodic in the summer and autumn, and at the biscuit company fairly steady with a few idle weeks during stock-taking.

The greatest activity and development was shown in the building industry when more than a million dollars was expended on buildings. This made it necessary to bring into the city a large number of building mechanics through the clearance system. The local supply of machinists, patternmakers, moulders and mechanics in the metal trades was also inadequate to meet the demand, and workmen were brought from other centres as required.

During the winter there was considerable unemployment, especially among unskilled labourers when quarry work ceased; 150 were laid off from paving and street repair work, 50 from work on gas and watermains, and the engineering branch of the Militia Department released some thirty workmen, in addition to the 500 laid off at the locomotive works. Relief work at snow shovelling was provided by the municipality through the local office of the Employment Service. The number of placements made by the office, which had increased steadily from 200 in 1918 to 3,000, was 5.6 per cent. smaller this year than last. A wage increase of fifteen cents per hour for stonecutters was the only change reported in wages and the hours of labour remained unchanged.

KITCHENER

The general industrial situation in Kitchener is described by the superintendent of the local employment office as follows:—

> "A survey of the activities of the employment office during the fiscal period showed the volume of business transacted in the district was below its usual standard. Compared with last year, road building was on a much smaller scale, that on the county roads being the greatest. Some country bridge work was commenced and a fair amount of work on street paving and sidewalks was carried on by the municipality. Building and construction was fairly good, as some of the larger contracts let last year were carried well on into this year before completion. Several business blocks were erected, the total value of building permits amounting to $1,091,043 as compared with $2,298,992 in 1923. Tire factories experienced their leanest year but were optimistic for the future. Towards the end of the year a decided improvement was noted in the furniture trade which had been very slack. Most factories were running short time for a part of the year, and a number of workers left the locality, seeking work elsewhere. During the year 2,500 German immigrants from Russia came into the district undertaking farm work for the most part."

LONDON

Work in the principal industries of London, Stratford, Woodstock, Ingersoll and Goderich is of a permanent character and, under normal conditions, would not show much variation throughout the year, with the exception of malting and brewing which is busiest in the summer. In the past fiscal year there was little development in these industries owing to general trade depression and the prevailing custom in many factories was to shorten the hours in order to keep as many as possible busy. The tendency of the retail trade was towards caution in placing orders, which resulted in rush orders causing extra work for a short time with a slump after the completion of the orders. The local supply was sufficient to meet the demand and there was a considerable exodus of skilled men to the United States because of depression in the trades at home and of higher wages offered in some of the American cities. Such a migration represented a distinct loss to the industrial life of the community, the metal and building trades being most affected by it. Further disturbance in the labour market, which was already overcrowded, was caused by the arrival in the city of a great proportion of the immigrants brought into this district from overseas for agricultural purposes.

The demand for factory help at the employment office was limited and the number of all placements made during the year was approximately 600 less than in 1923. There was, however, a demand for domestic help that could not be met as the number of requests received from all over Western Ontario was much in excess of the number of domestics from overseas who came to this district. As far as this office was concerned the past year was the leanest in its history. Unemployment was considered so acute that the city authorities carried on a scheme of paving and general street improvement which employed from 350 to 450 men steadily for three or four months. Some work on storm sewers was also carried on, and the Provincial Government undertook some highway construction in this district.

NIAGARA FALLS

The chief events of industrial importance in Niagara Falls and Stamford Township were the rehabilitation of the local street railway by the Canadian National Railways, the building of the new Michigan Central steel arch bridge, a sewage system in the Township of Stamford costing between $375,000 and $400,000, a waterworks system in Chippawa, and paving and road construction carried on by the municipality. In addition, the Queen Victoria Park Commission carried out a big construction programme consisting of two arch bridges at Dufferin Islands, resurfacing main roadway in Queen Victoria Park and the parkway at Chippawa, construction of office building and tool-shed, and reconstruction of various other buildings, construction of a new six-inch watermain between Niagara Glen and Queenston, the installation of a septic tank at Queenston, construction of a power transmission line in the township of Stamford and the development and parking of 150 acres of land between Niagara Falls and Queenston. Approximately $113,600 was expended on this work, giving temporary employment to more than 100 workmen. During the winter the municipality undertook some sewer work, thus providing one week's work in turn for married citizens who had resided at least six months in the city. The Provincial Government laid six miles of asphalt pavement in Stamford township.

In the manufacturing line there was very little development, with the exception of one firm which trebled its business and staff during the year. About 75 per cent. of the plants ran full time. The business transacted through the employment office, however, compared favourably with last year. While there were 1,696 fewer vacancies, the total number of placements, 2,407, was a decrease of only forty as compared with 1923. The applicants who registered numbered 3,766, an increase of 511 over the previous year. In the women's division there were 106 more placements this year than last, the majority of workers being placed in domestic service.

The superintendent of the Niagara Falls office compiled some very valuable information with regard to employment not only in Niagara Falls but throughout the entire district covered by his office. Space does not permit the publishing in full of the data collected, but the following extracts are particularly worthy of note:—

> "An analysis of country of birth showed that men and women of thirteen different English-speaking racial groups used the office during the year, while twenty different nations were represented in the list of non-English-speaking people who were registered during the year. Of the total registered, however, 80.5 per cent. were either Canadian, English or Scotch. In the non-English-speaking groups the largest number of registrants were Italians with Swedes a close second. A complete list follows: Canadians, English, Scotch, Irish, Americans, Welsh, New Zealanders, Jamaicans, British West Indians, Australians, South Africans, Channel Islanders, Newfoundlanders, Bulgarians, Chinese, Czecho Slovaks, Danes, Finns, French, Galacians, Germans, Dutch, Icelanders, Italians, Lithuanians, Norwegians, Poles, Roumanians, Russians, Swiss, Swedes, Serbians and Ukrainians."

NORTH BAY

In November, 1923, it was apparent that various contracts of the extensive construction programme, which had been in full swing for the past two or three years in the north country, had reached completion, when men in large numbers

began to arrive in North Bay. These men were readily absorbed by the lumbering camps. Weather conditions greatly assisted the employment situation, as the winter was open until quite late, which resulted in cutting operations in the lumber industry being maintained till late in the season. In March unskilled labour from the logging camps congregated in North Bay, and it was not until the early part of April that relief arrived, when large orders for extra gang labourers on railroad maintenance and bushmen for the spring logging cut were received. In North Bay where transient workmen are so plentiful and large orders for men so common, the ratio of supply and demand is a difficult matter to determine. April proved a record month for placements, and during the summer months following, although vacancies were continually being reported, the lumber, railroad maintenance and manufacture of lumber being chiefly responsible for this demand, it was noticed that the vacancies available were less numerous than the previous year and the supply of labour much greater.

An influx of immigrants, particularly Finns and Swedes, who appeared to be in this country through the over-zealous efforts of the steamship companies' agents, created oftentimes during the year a congestion on the local labour market and, although no serious unemployment resulted in North Bay, concentrated efforts had to be put forth in securing sufficient orders to take care of the additional labour.

In April a programme of work which provided employment for approximately 300 men was put into operation. Extensive street paving, installation of additional waterworks and sidewalk construction were included in this scheme. Work on highway construction was dull, the only call for help being for the Romford-Sudbury highway. Members of the building trades were actively engaged during the year.

OSHAWA

The number of placements made in the Oshawa office of the Employment Service showed a reduction of 20 per cent. as compared with 1923. The year was one of general dullness in trade, and a number of industries had periods of short time. The local supply was more than sufficient to meet the demand for labour, and many building tradesmen left the city to get work elsewhere. Immigrants from the British Isles who came in greater numbers to this district than in former years had a hard time in getting established as some were out of work for months. During the winter the municipality provided work on sewer and watermain construction for married men and those supporting families. The Federal Government commenced work on a breakwater at the Oshawa harbour, and the Provincial Government a boys' industrial school at Bowmanville and a nine-mile stretch of highway construction.

OTTAWA

By the end of May a large number of projects in building were under way but did not provide sufficient work for all skilled mechanics nor for all unskilled labourers. Stonemasons were well employed, but considerable unemployment continued among the other building trades, as there was less call for men than had been hoped for early in the year. About eighty-four men were sent from the Ottawa office for highway construction work and 700 for railway construction work. Orders for this class of work received early in the spring at thirty cents per hour were easily filled, but when the rate of pay dropped later to twenty-five cents men would accept it only as a last resort.

There was considerable demand for agricultural help at $20 to $25 per month and many placements were made. Among others, nineteen Russian boy refugees who had been brought to the office by the Immigration Department were placed immediately and have proved to be very good workers. For haying and corn-cutting wages were $2 per day with board or $30 to $40 per month.

In January loaders, rollers and hookmen were required for the logging camps, and in March river drivers at $55 to $60. Later millmen were shipped to the sawmills, although they were not easy to get at $22 to $30 per month and when the mills were in urgent need of trail and road cutters many of them raised the wages to $26 to $30.

The employment situation in December was better than in the previous year and the number of unplaced applicants was considerably lower. Owing to the snow in January there was an increase in the amount of casual work, and at the end of the month the C.N.R. took 100 men for this work. In February the very heavy snowfalls again helped the situation and although no extra work was undertaken by the city conditions were not so bad as had been expected. March was probably the worst month of the year as far as employment was concerned and in this month two of the biggest companies laid off large numbers. It was noted that the British harvesters and other immigrants who came to the city were anxious to work at the trades they had followed in the old country and were not willing to take farm work.

As Ottawa is not an industrial city the number of orders for factory work formed but a small percentage of the total received at the employment office. The number of placements in the men's section showed a decrease of 6.9 per cent. as compared with last year.

Women's Section.

During the year 427 more domestics were placed through this office than during the previous year, although a falling off of orders for day workers was experienced. The wages for domestics were practically the same. In institutions cooks were being paid from $40 to $60, other help $20 to $30, and in private houses the maximum for cooks was $45 and for other help the wages ranged from $20 to $40. Domestic help on farms was being requested at from $15 to $25. Frequent enquiries were received from women in Great Britain about the possibility of securing employment as matron of an institution, linen maid or housekeeper where entire charge would be given. Encouragement was seldom given such applicants unless they were willing to take the responsibility of coming to this country on the chance of securing suitable employment after their arrival as the office could make no guarantee.

The Canadian headquarters of the Metropolitan Life Assurance Company were established in Ottawa during the year and many of the best women who were released from employment in the government service were taken on by this firm. It was found difficult to place general clerical workers. In all lines of work the number of placements increased 4.3 per cent. as compared with 1923.

PEMBROKE

During the past year the business transacted by the Pembroke office of the Employment Service of Canada increased approximately 91.9 per cent. A greater number of employers of labour took advantage of the service offered which made more placements possible, and the registrations were such that practically all labour required, both skilled and unskilled, could be supplied

through the office. There was a decided increase in the demand for bushmen. Two lumber companies operated large sawmills in Pembroke and the season's cut was much larger than the previous year. At the close of the mill operations the mill-hands were given the preference in the lumbering camps and in this way were kept steadily employed.

The year was a satisfactory one for the various industries in Pembroke and all except two operated at normal capacity. The woollen mills, however, operated on short time for a part of the year owing to a shortage of orders.

Approximately 700 men were employed on highway construction work and considerable work on street paving was also carried on, as well as the erection of a new bridge on Mary Street costing in the neighbourhood of $60,000. Last year the Federal Government granted some $118,000 for the building of a new dock at Pembroke, and a great portion of the work was completed this year. All these undertakings gave employment largely to unskilled labour. A new school and hospital were among the public buildings erected during the year and costing $160,000 and $115,000 respectively.

PETERBOROUGH

On account of depression in local industries during the year many workers left the city to seek work elsewhere. No new industries were opened up, but the electric company constructed large machine shops to handle the heaviest variety of machinery, and another company made an addition to the plant. In the majority of the factories short time was worked at some season of the year. This condition was reflected in the work of the employment office, where the number of placements dropped 18.9 per cent. and female help, of which in normal times there has always been a shortage, was in excess of the demand for both factory work and domestic service. The usual number of ex-service men were employed on the Trent Canal for repair work and dredging during the summer, and considerable work on sewers and pavements was carried on, as well as road work in the county and work on a bridge at Lakefield.

PORT ARTHUR

In the Port Arthur district business marked time during 1924. The ship building industry was very quiet, running on short time and at about one-fifth capacity on repair work only. The pulp and paper mills, however, were working full time. There was an influx of labour to the district through immigration, and the consequent over-stocking of the labour supply resulted in a cut in wages of from 15 to 25 per cent., and in wages for bush work the cut was from 40 to 50 per cent. During the winter there was considerable unemployment and the city council provided work on local improvements for married men but the registration was done through the city clerk's office in order that it might be ascertained whether or not the registrants were ratepayers. A certain amount of employment was given for work on the breakwater, and the Provincial Government undertook some road development and the erection of two Provincial buildings, the court house and jail.

The heaviest enlistment of men at the employment office was in the months of May and October when the seasonal work changed from bush to railway and railway to bush work. There was a reduction of 3.7 per cent. in the number of placements made, not a great decline considering the change in industrial conditions as compared with the previous year.

ST. CATHARINES

On account of general trade depression throughout the Province, workers from all parts came to this district for work on the Welland Canal, the number being larger than in former years and in greater excess of the amount of labour required. Practically all factories, with the exception of a paper firm, were running short time or with reduced staffs. During the year four firms with aggregate staffs of 648 closed down but the effect of such suspension of business was partly offset by the opening of three other firms with aggregate staffs of 335. With two of these firms which employed mostly female labour, arrangements were made to take care of registrations for them in the local employment office. Another firm which had formerly secured its help in Buffalo did all its employing through this office. With this development of the scope of the women's section the number of placements for the year was larger than in 1923, while the number in the men's section decreased owing to general industrial conditions.

ST. THOMAS

Due to the fact that greater use was made of the St. Thomas office of the Employment Service of Canada, the number of placements increased nearly 5 per cent. as compared with 1923, in spite of the fact that many industries cut down their staffs during the year. Wages and hours of labour were practically unchanged except in the case of employees in the train service of the railroads who received an increase of 5 per cent. About ten miles of highway was constructed by the Federal Government and the railways employed 500 labourers for seven months on construction work, in addition to their regular staff.

SARNIA

The business transacted by the Sarnia office was smaller than in the previous year, the number of placements being 9.7 per cent. less. Some factories which in former years worked overtime in the summer months were on short time and two firms suspended operations for a short time but in no case was it necessary for any factory to give up business permanently. A large steel plant was under construction, which when operating will employ 200 or 300 men. A number of skilled and unskilled men left the locality for work, especially in the automobile industry, on account of the slackness in that trade here and the larger wages said to be offered elsewhere. Many of the immigrants who came to this section of the country had been shipyard workers at home and had difficulty in getting placed as freight handlers, stevedores or general labourers. Fortunately it was a good year for the navigation company and considerable work at their freight sheds was offered to the men laid off at one of the foundries. Approximately 200 men were employed as freight handlers during the year. The scarcity of work on shore had the effect of reducing the labour turnover among sailors, who stayed by their jobs rather than take the chance of being out of work ashore.

SAULT STE. MARIE

The chief event of industrial importance in this district during the year was the building of the large aerodrome for the government forestry planes. The effect of such an event, coming as it did when the steel plant was closed, was most beneficial and provided work for many married men who could not move out to the lumber camps. The Provincial Government also carried on some road construction work which took care of the most needy citizens who had applied to the city for relief. Such applicants were recommended to the

foreman in charge of the work by the city relief officer and in every case were taken on so that it was not necessary for the municipality to take special measures to deal with the unemployment problem. There was not sufficient influx of labour to the district to disturb local conditions, with the exception of seventy-five Bulgarians brought by one of the lumber companies in the spring.

The amount of business transacted by the employment office was practically the same as last year. Although the number of vacancies reported was over 23 per cent. less than in the previous period, there were only thirteen fewer placements made, or less than one-half of one per cent., and the number of applicants dropped only 1.2 per cent.

The steel corporation was operated to capacity for about five months of the fiscal year, when approximately 3,000 men were employed. The orders for steel rails was not sufficient to keep the entire plant busy, so that the pay-roll decreased to about 800. The pulp and paper company was operating full time with the exception of the sulphite department, which was under reduced operations for a part of the time, and the cutting of the pulpwood which was, as always, a seasonal occupation. Hundreds of men were employed by this company and the two lumber companies on logging operations, and at the completion of the river drives in the spring the majority of these men were absorbed by the railways as section and extra gang labourers. The wages for bushmen were smaller this year than last, having dropped from $35-$40 to $26-$30 per month with board, but a first-class bushman could still command $45 to $50 per month. The pulpwood cut was much smaller this year than in former years, and the average wage for four-foot pulpwood was $2.25 to $2.75 per cord.

SUDBURY

In the Sudbury district there was no great expansion in mining during the year. One nickel company re-opened two mines which they worked to capacity and one of which had been closed since 1918. Another nickel company closed down the mines, smelters and refinery, causing a layoff of 1,100 men, but it happened at the time when opportunity for other employment was at its best and many of them secured other work through the Sudbury office of the Employment Service. The principal mining companies were running full time three shifts of eight hours each seven days a week, between 1,200 and 1,300 men being employed at one mine during the year. The local supply of labour was sufficient to meet the demand for the mining industry but fell far short of supplying the need of the lumbering and railroad activities, for which the other offices of the Employment Service in Northern Ontario gave valuable service. At the beginning of the year lumbering gave employment to 4,000 men and the companies reported a record cut. The number of immigrants who came to this district were mostly Swedes, Finns, Danes and Czecho Slovaks, and they were placed on railroad construction work, in the mines and the lumber camps as they were strong and physically fit.

At the employment office the number of placements increased 18.4 per cent. as compared with 1923, due largely to the greater operations of the lumber companies. Practically the only distress caused by unemployment was in cases where the head of the family was unable to go out of the town for work, or was caused through sickness. For such emergencies the municipality provided work snow shovelling or direct assistance was given by the municipality or social organizations. The highway construction work carried on by the Provincial Government provided employment for several hundred men who might otherwise have been out of work for a prolonged period.

TIMMINS

Construction work in the vicinity of Timmins did not employ as many men during the past year, and there was an influx of men looking for work in the mines in greater numbers than could be absorbed, in spite of the fact that two more mines were on the producing list, while two others increased their staffs. It was not always possible to get experienced bushmen, although on the whole labour was plentiful. The only work carried on by the Government was the completion of an extension on the T. & N.O. Railway at Cochrane and some road building. The number of placements decreased 16.6 per cent. as compared with the previous year.

TORONTO

During the past year there were registered at this office large numbers of unskilled help, mechanical tradesmen and clerical help whom it was impossible to place. In the same period employers were more particular, more difficult to please, jobs were more scarce and in every way it seemed a difficult task to get the men disposed of satisfactorily.

In previous years large numbers of unskilled men were employed on the rehabilitation of the Toronto Street Railway; considerable work was also carried on by the Hydro-Electric System and on the Welland Canal. Bush work the year before was open to any man who was strong enough physically to stand the work in the woods, and they were snapped up readily by the agents representing the various lumber companies at wages from $45.00 to $50.00 per month or more, while in the fall of 1924 only fully experienced bushmen were employed at wages from $26.00 to $30.00 per month. This was a factor in the cause of the large numbers of single men and unattached men who thronged this office and the streets daily during the fall. In the winter when so many were pressing for work the city created some relief work. Some three or four thousand, or possibly more, were sent out from the office for this class of work, running from the early part of February until the first of April.

In spite of the lean year there was a general feeling of optimism that business would improve greatly during the coming year. It is expected that a great deal of employment will be afforded on the construction of the viaduct, sub-ways, the new stadium at the foot of Bathurst Street, the sewers in North Toronto and the new office buildings which are to be erected in the near future.

ANNUAL STATEMENT—MEN'S SECTIONS

1923-24	Applications for work	Vacancies notified	Placements including the Transfers		
			Regular	Casual	Total
Men's Industrial, professional, handicap and boys' sections	51,958	31,831	4,673	26,777	31,450
Farm section	3,762	3,235	3,729	....	3,729
Out-of-town labour section	4,486	3,329	4,482	....	4,482
Totals	60,206	38,395	16,884	26,777	39,661

Men's Industrial Section.

The building trades were quiet and large numbers of building trades mechanics left the city for points south, but by the close of the year many of them had returned to work on some of the large jobs just commenced, including the

twenty-two-storey building at the corner of Adelaide and Victoria Streets, and the sixteen-storey building at the corner of Adelaide and Bay Streets. The year closed with every indication that there would be considerable building going on all winter.

Business was slack in the metal trades and there were more unemployed moulders than previously; agricultural implement lines reported a very quiet season, in fact the quietest in the history of that business. The paper and leather industries were able to hold their own and there were few registrations in these lines. Applications in the textile and clothing industries were more numerous then usual.

Men's Farm Section.

Men were more plentiful for farm work than in 1922 and 1923, due to increased immigration and the general depression in other trades and professions. The backward spring delayed seeding until the middle of April, and in some cases the farmers had not planted their grain until the middle of June. The placements measured up well to the standard of 1923, despite the fact that no men were sent to the western harvest through this office and very few were sent out fruit-picking in the Niagara district, as farmers could get their men locally this year. However, ninety-six more men than last year were sent out of the zone. The placing of married couples kept well up to the average. This phase of the work received the very best consideration, and every effort was made to show the farmers the advisability of this class of help. Regarding wages, there has not been a decrease corresponding to the drop in the prices of farm products since 1923, and the farmers of Ontario are willing to pay a fair wage for a fair day's work. The wages compare favourably with other kinds of employment, when one takes into consideration board, etc.

Out-of-Town Labour Section.

Bush operations were curtailed to less than one-half of last year's cut and there was a great supply of labour for this class of work. The total placements in bush work this year numbered 1,900, a decrease of only 200 as compared with last year, which had been a banner year. Wages showed a decrease of $20 to $25 per month. Several companies discontinued the use of agents for hiring purposes and dealt direct with this office. In the whole section the number of placements dropped 1,600, but when it is taken into consideration that 2,500 men were sent to special work in connection with hydro and highway development last year and that this year the placements on this work were nil in this office, it will be realized that the demands for other lines of work must have been fair in this section, especially under such business conditions as existed throughout the Province.

Handicap Section.

A statistical record of the work of this section would not reveal the nature of the change which took place during the year. Through the improved scouting system contact with employers of labour became more personal and intimate, a very great advantage to the work which was carried on. Because of this improvement it was possible to increase the number of permanent positions found for clients and the number of permanent positions of responsibility with opportunities for advancement. The closer co-operation with the Federal and Provincial government departments was fruitful of results and the City of Toronto and many large industries aided and co-operated to the best of their ability. Although the number of new applicants registered was smaller than

last year more of these applicants had special training or aptitude for some particular occupations, and the increased knowledge of the nature of the handicap made placement work more satisfactory.

Professional and Business Section.

During the year there were 1,356 new registrants in this section and 214 placements were made. This number did not equal last year's record, but was fairly creditable under the circumstances. Among the somewhat unusual placements made were two for work in South America.

Boys' Section.

New registrations numbered 869 in this section during the year and 610 placements were made. Towards the end of the fiscal year it was thought advisable to discontinue the boys' work in a separate section and to combine it with the work in the Handicap Section, in order that special attention might be given by the scouts to securing permanent work for the boys at which a trade might be learned. In the past it had been found that the great majority of the jobs were of a temporary nature, preparing the boys for swelling the ranks of casual labour rather than providing them with the opportunity of serving a useful apprenticeship.

Scouting Section.

In spite of general business conditions, which made it impossible for employers to deal with the office as largely as they would have liked, the office was successful in obtaining for various employers specially trained workers required for particular kinds of manufacturing. One such expert enabled the firm to which he was sent to manufacture a new line of their product, goods which have no superior in America, and the first order for which was for eighty tons. In many ways the work of this section was more difficult owing to the scarcity of jobs, but the co-operation of employers was evidence of appreciation of the Employment Service.

Clearance Section.

Owing largely to the inactivity of construction work through the Province the number of workers transferred out of the Central Clearing House in the past year was 2,906, or a decrease of approximately 1,950 as compared with 1923. Of this number, 495 were farm labourers, which is ninety-six more than were transferred last year; 127 were tradesmen in connection with building and construction work; 297 belonged to the domestic group; 76 were iron moulders, machinists, tool-makers, etc., belonging to the manufacturing group; 1,809 were bushmen, and 96 were unskilled labourers, this last group showing a decrease of nearly 1,900 as compared with the previous year.

ANNUAL STATEMENT—WOMEN'S SECTIONS

1923-24	Applications for work	Vacancies notified	Placements including the Transfers		
			Regular	Casual	Total
Domestic Section	22,788	19,173	4,425	10,080	14,505
Clerical Section	5,973	1,670	758	759	1,517
Industrial and Farm Section	4,916	1,393	910	47	957
Totals	33,677	22,236	6,093	10,886	16,979

Women's Domestic Section.

The outstanding feature of the work of this section was the increase in the number of applicants and the decrease in the number of vacancies, particularly those of a casual nature. There were 868 new arrivals from the Old Country placed, or 164 less than last year. The period of unemployment, usually noticeable in October and November of each year, began in July this year and was more marked. One reason for this was the fact that more applicants were placed in permanent resident positions, causing the employers concerned to dispense with the services of the casual worker.

Women's Clerical Section.

During the second half of the fiscal year the number of clerical positions listed showed a marked decline, with the result that the total number of placements made was 585 less than during the previous twelve months. Three hundred and eighteen firms utilized the services of the office in securing help, which was the largest number in any one year. Several bond and mail order firms depended entirely upon this office for clerical workers.

Women's Industrial and Farm Section.

The number of unskilled workers registering in this section seemed to increase proportionately with the continuance of quiet business conditions although there were never many experienced garment and shoe operators unemployed. Too many girls were unable or unwilling to serve apprenticeship to a trade and drifted from one kind of unskilled work to another. In consequence, the number of interviews in the office increased by 2,000 during the year. There were 855 immigrants from overseas interviewed for clerical, industrial and domestic work on farms.

The demand for domestics for farms exceeded the supply and the wages offered were $20 to $25 per month. More placements were made than in 1923 and in many cases the woman placed was able to take a child with her. Fruit pickers were sent to camps in the summer and autumn.

WINDSOR

The event of greatest industrial importance in the Windsor district during 1924 was the opening of the twelve million dollar extension to the Ford Motor Plant. Unfortunately, however, the automobile business was quiet, so that it was not possible to estimate the normal local benefit of such a development. A few of the industries were active, but short time operation was the general experience. A shortage of bricklayers and plasterers prevailed in the summer, partly due to the fact that earlier in the year, when building work was slack, there had been a considerable exodus of building tradesmen from this district to the cities across the line, where wages were reported to be higher than were paid here. On the other hand, there was an influx of labour which accentuated to a certain degree the unemployment situation in Windsor, although there was no noticeable reduction in the cost of labour on account of this surplus. When the situation became acute the municipal authorities opened up sewer work in order to give employment to married men who were registered at the employment office and who had resided at least six months in this city.

The number of placements made through the office was 25 per cent. less than in 1923, although the number in the women's section increased approximately 35 per cent. because of the development in this section. The proximity of Detroit made the placement of domestics difficult, because it was generally believed that higher wages were paid there and many of the women did not object to leaving their country.

Employment Agencies Act

There are fourteen licensed private employment agencies operating under this Act, seven of which are in Toronto, two in Sudbury, two in North Bay, two in Ottawa, and one in Fort William. The number of persons placed in employment by these agencies during the fiscal year was 35,391, as compared with 39,333 in 1923, or a decrease of 10 per cent.

PRIVATE EMPLOYMENT AGENCIES

Explosions

A number of explosions occurred during the year, but none of the exploded vessels had been examined at any time by inspectors employed in the Steam Boiler Branch.

On November 24th, 1923, a hydro-pneumatic tank exploded on a farm at Newmarket. Fortunately the failure of the tank occurred early in the morning when there was no person around, but considerable damage was done to the building, which was of concrete construction. The exploded tank was 42 inches diameter and 13 feet 6 inches long, made up in three courses. The shell was made of 3/16-inch plate with 5/16-inch heads bumped to the radius of shell. The circumferential seams were welded and the longitudinal seams were lapped and single riveted with ⅜-inch rivets, pitched 1½ inch and welded. One head was flanged and let into the shell, the shell plate being turned over the head and welded. The other head was only fitted without any flange to the shell and welded. At this latter head is where the initial rupture took place, shearing the plate nearly all the way around.

On January 3rd an employee of a starch company was severely scalded when a pressure vessel failed; he was removed to the Toronto General Hospital.

On January 6th a cast-iron sectional boiler exploded in the basement of a store in Windsor, resulting in damage to floor and goods valued at $2,000, and injuring one person, who was struck by a piece of the boiler which was forced through the floor. An examination of the damaged boiler was made and the direct cause of the explosion was found to be ignorance in the operation of same; that the safety valve was stuck fast and had never been known to function, and the steam pressure built up after fresh fires on the boiler until it was unable to withstand the pressure, hence the failure. This boiler, together with eleven others in the same block of buildings, had never been inspected since installation.

On January 2nd an air tank exploded in the plant of one of the gold mines at Kirkland Lake. This tank was 42 inches diameter and 10 feet long, made of ¼-inch plate with heads 5/16 inches, and made up in two courses. Fortunately no person was injured, but considerable damage was done. In its flight

it passed through the compressor room, breaking the water circulating pipes over the boiler house and landed seventy-five feet away. Upon examination the inspector found thirteen old fractures through the rivet holes and the plate badly crystallized.

On January 9th a tank exploded in St. Catharines, instantly killing the man who was fitting it up as an oil storage tank. This tank had been used previously for storing gasoline and it is conceded that the accident was caused by a match being lighted, igniting the gasoline fumes.

On February 6th, No. 6 boiler in the Parliament Buildings, Toronto, ruptured without doing any serious damage. This rupture occurred early in the morning of the opening of Parliament.

On February 14th a serious explosion occurred in the plant of a carpet company. Fortunately no person was killed, but the attendant was badly burned and the damage amounted to about $3,000. The boiler was 72 inches in diameter by 18 feet long, practically new and fabricated under the supervision of the Steam Boiler Branch. A rupture occurred on the bottom of the first course and extended 21 inches long, 30 inches around the boiler, and the plate came down six inches. The opening in plate was about five inches wide. The fusible metal in plug had melted, the rear head, bottom of boiler and the tubes were badly burnt and distorted, indicating positively that very little water had been in the boiler at the time of failure, because the boiler did not leave its foundation, and the attendant was not scalded, but burned by the fire which was blown out through the firing doors. The boiler was ruined and was replaced with a new one. The attendant stated that he had the required amount of water in the boiler, but from the examination made it seemed certain that he was mistaken, because the entire boiler had every indication of being dry.

On August 12th a boiler located in a cheese factory exploded, resulting in the death of the owner and two other men and seriously injuring a fourth, besides completely destroying the buildings. The exploded boiler was 32 inches diameter, 8 feet long, made up in one course and two plates. Originally the shell plates were ¼ inch thick and the heads 5/16-inch thick, and contained thirty 2½-inch tubes, 7 feet 10½ inches long. The longitudinal seams were lapped and single riveted with 5/8-inch rivets pitched two inches. The flat surfaces above the tubes were supported by three direct stays, 7/8-inch bodies jumped up on ends to one inch and screwed through the heads, and riveted over. There was a 3 x 4 handhole in each head below the tubes. The shell of boiler and rear head were blown out into a field in rear of building about 350 feet. The front head and a number of tubes were blown out to the side of building. Some of the tubes could be seen sticking up in a pond across the road in front of building about 500 feet away. The boiler was a complete wreck and was flattened out. The back head had sheared around the flange about half way across the top and remained with the shell plates, being held in place by ten rivets. The inside of shell was badly pitted in several places, and along the edge of longitudinal seam for its entire length the plate was badly grooved, and at one particular place for twenty-four inches along there was less than 1/16 inch of solid plate. The plate around front handhole was badly corroded and eaten away to a knife edge. There seemed to be no question as to the direct cause of the explosion. The former owner of the boiler stated at the inquest that the cause of the explosion was "water coming in contact with hot metal." This statement would appear erroneous because the shell plates were clean inside and outside, and showed no signs whatsoever of burning, and the direct cause was the deteriorated plate at longitudinal seam where the

initial rupture occurred. From information received from the son of the previous owner, who lives close by, it was the custom to start fresh fires every morning at 5 o'clock to raise sufficient steam to take care of the work when the farmers brought their milk in, which was usually about 6 o'clock every week-day morning. When one considers the construction of the boiler shell with two longitudinal seams single riveted the entire length, the fires let die out every night and fresh fires built again in the morning, the tendency to set up grooving in the plate at the seam may be readily understood. The shell plate had not been truly rolled round at the joint, leaving about six inches flat, so when the pressure was exerted on the boiler it endeavoured to take on a true cylindrical shape, and this continual expansion and contraction caused a bending back and forth of the plate which set up what is termed grooving. (If this grooving is not discovered it will gradually deepen until the plate becomes thin enough to be unable to withstand the pressure imposed upon it, then the boiler fails.) This grooving is what took place in this particular boiler, and besides the grooving the head plate around the hand hole was badly wasted away through constant leakage. This Branch was informed that this particular boiler had been sold five years ago and that it had been used for some time previous to the sale. There is nothing in the records of the Steam Boiler Branch indicating that this boiler had ever been inspected according to the requirements of The Steam Boiler Act and Regulations; furthermore the boiler head had not been stamped in the customary manner. It was reported that the safety valve was set to function at eighty pounds pressure, but after a diligent search this valve could not be found. Quite a number of boilers after they failed have been viewed by the inspectors, but none of them revealed such clear evidence as to the direct cause of failure. Section 300, page 167 of the Regulations provides for the inspection of used boilers before they are sold or exchanged, and these requirements were not adhered to. The Steam Boiler Branch had no knowledge of the transaction, consequently it does not assume any responsibility.

On September 26th a digester in the jute and rag room of a paper mill exploded, wrecking completely the building in which it was installed. The digester was 72 inches in diameter and 18 feet long, made up of $\frac{3}{8}$-inch iron plate in eight courses. The heads were made up of eight sections and riveted to a cast iron flange on trunnion on which the digester revolved. The shell and one head were blown 300 feet away and the other head travelled in the opposite direction. The explosion took place at night when few employees were around, but if this accident had occurred in the daytime the lives of twelve workmen would have been endangered.

Board of Stationary and Hoisting Engineers

Chairman of the Board: J. M. Brown.
Members of the Board: W. J. Scott, S. G. Rose.
Inspector: E. J. Everett,

Office, Spadina House, Toronto.

Grand total			2,193
Amount of applications for refund of fees to applicants made to the Treasury of Ontario during the fiscal year			$337 00

During the fiscal year ending October 31st, 1924, there was one prosecution in court for violation of the Act respecting Stationary and Hoisting Engineers.

Inspection of Factories, Shops and Office Buildings

Chief Inspector: James T. Burke.
Office, Spadina House, Toronto.

All inspectors connected with this Branch are engaged in expert inspection work throughout the Province and in the course of their duties must see that all statutes relating to the protection of persons employed in factories, shops and office buildings are complied with. Many valuable reports are appended, descriptive of the work of these inspectors in dealing with such matters as the guarding of machinery, mechanical locking devices for elevator gates, proper ventilation and the elimination of dust and gas fumes, lighting, heating, general sanitation, hours of labour for females and youths, the provision of fire escapes, the prevention of child labour and other phases of inspection work, as well as their duty in assisting in the enforcement of the Adolescent School Attendance Act, the Minimum Wage Act, the Steam Boiler Act and the Stationary and Hoisting Engineers' Act.

The employees in the industries inspected during the year numbered 272,949, as compared with 256,064 in 1923. A decrease of one in the number of accidents and of twenty in the number of these accidents which proved fatal was reported.

Accident Prevention

As a safeguard against accidents plenty of air and light should be provided, artificial light when natural is not available, as good light is imperative when rooms are crowded with machines such as saws, jointers and shapers. The liberal use of white paint or lime wash will assist materially in the diffusion of light, and together with clean windows and light globes, will act as an important factor in reducing the number of accidents. Ample room about machines should be provided and where this is not possible passages between machines, or between machines and walls which are too narrow for safety, should be blocked at each end. Partitions isolating dangerous machines, if they can be so arranged as not to interfere with the distribution of light, are also valuable as safety devices, especially where saws or such machines are placed side by side.

Safeguards

Safeguards should be provided wherever possible for all dangerous places and for all machines the unguarded operation of which is dangerous. Such devices will not always prevent accidents, but they will prevent many, especially of the most serious ones, and they will often diminish the injury in the case of accidents which they cannot wholly avert. In making things safe they also conduce to better work. The best time to safeguard a machine is when it is built and many more machines would be protected by manufacturers if such protection were insisted upon by prospective purchasers.

To obtain the best results from safety devices, their use in entirety should be insisted upon whenever the work permits, and their immediate replacement should be required after completion of work for which they cannot be used. Employees should be forbidden to remove a safeguard from a machine without the consent of the foreman or to start the machine unless the guard is in place. Safeguards can well be painted in bright red to make them readily distinguishable and to help foremen and other supervisors to detect displaced or defective guards. All machines should be provided with adequate belt shifters or other efficient means of quickly disengaging the power. At all dangerous machines, such as saws, jointers, shapers, etc., a secure footing should be provided in the form of rubber mats, rough metal grating, powdered rosin, or other efficient means. If rubber mats are used, they should be watched carefully to see that their usefulness is not impaired by their tearing, wearing smooth or filling up with dust.

Signs

Warning signs judiciously used will tend to prevent accidents, as they are a constant reminder that danger does exist. They should always be backed up, however, by enforcement and supervision. All signs should be as brief as possible, prominently displayed and durable. At all dangerous machines there should be signs forbidding operation until the workings and the dangers of the machine have been fully explained, also prohibiting oiling, wiping and repairing without stopping the machine. When a machine is stopped for repairs a sign reading "Danger" should be placed on shifting lever or controller. A sign used at a special danger point can well have on it a hand pointing to the source of danger, expecially where men of various nationalities are employed, and where there is no sign in each foreign language.

Inspection and Care

Careful inspection of all machinery and structure, in fact of the entire plant, will prevent many accidents by discovering defects and dangerous conditions due to wear and other causes. All structures and appliances should be tested regularly, which will also tend to prevent misuse of equipment, lessen its depreciation and promote general efficiency, as well as obviate accidents.

Use of Machines

Before beginning work a workman should examine the machine, tools and apparatus which he is to use and the safeguards for them. If they are not in proper order, he should report their condition to his foreman, not starting work until the defects have been remedied. No employee should attempt a job on a new machine without proper instructions from his forman or superintendent. Adjustments, oiling, etc., should not be permitted while the machine is operating but, when absolutely necessary, it should be done only by one who fully understands the machinery and the attendant danger. The tendency of operators to remove a piece of waste material from a critical place should be curbed as much as possible; a dust brush, an air jet or a suction is advantageous in some cases and helps to prevent accidents.

Clothing

All workmen should be required to wear tight-fitting clothing, operators of machines should work with sleeves cut off at the elbow, if they are not tight fitting. Rolling up loose-fitting sleeves is not safe, use of gloves should be avoided as much as possible, and overalls and jumpers should be properly buttoned. Dressing, undressing or storing of clothes in close proximity to moving machinery should be prohibited.

Falling Objects

Falling objects are responsible for 825 accidents. "Hit by falling objects" is found in all accident statistics and is therefore prominently kept before statisticians. We do not have to look for this danger in remote or inaccessible places, therefore employees and others should not leave tools and materials on platforms, shelves or step ladders that are unprotected and it is very important that every person should bear in mind the seriousness of this hazard and do all possible to remove chances of accident from this cause.

Occupational Diseases

Occupational diseases are to a limited extent invading this province and employees should receive explicit instructions regarding the dangers of their work, the effects of poisoning, the precautions to be observed and the proper first aid treatment in case of poisoning. Prominent placards containing rules, instructions and precautions should be conspicuously posted in each plant and workroom, owing to such a variety of conditions entering into the occupation at disease area. It has been found a very great problem in European countries to reduce this hazard to a minimum, but the adoption of the following rules will do a great deal towards prevention:

1. Appliances for accomplishing the arrest of gases and dust at their origin, the removal by exhaust fans, thereby preventing them from entering the nose and throat.

2. The displacement of particularly dangerous labour methods and materials by the introduction of less dangerous labour processes and materials, as well as by the employment of chemically pure materials.

3. Instructions to workers just entering upon an occupation concerning the properties of the poisonous substances extracted, manufactured, used or otherwise evolved, and whenever possible cautionary leaflets should be placed in the hands of the workers with the repetition of this instruction at frequent intervals, also the posting of precautionary regulations to insure safety.

4. Employment of appropriate means of personal protection, as work clothes, caps, gloves, eye protection, and as necessary adjuncts, mouth and nose shields, respiratory masks, etc.

5. Practice of bodily cleanliness by the use of wash, bath, and dressing rooms, the use of special rooms for eating, separate wardrobes or lockers for work and street clothes and frequent non-hazardous cleansing of the clothing.

6. Immediately report all symptoms of indisposition, attention to wounds of the skin caused by handling corrosive materials, the quick employment of an exceptional antidote that gives promise of success at the very first symptoms of poisoning and the simultaneous summoning of a qualified physician.

Elevators

The introduction of the order that all power elevators having operating gates at each floor should be equipped with a mechanical device that would prevent the car being moved from a floor until the gates were closed and locked has brought about splendid responses and results. Approximately 7,000 locks have been attached to elevator gates and, as predicted, not a fatality has occurred on an elevator equipped with mechanical lock that was in good working order.

A handy hammer, a flashlight, mirror and a good pair of eyes will enable an experienced man to make an inspection of elevators, the hammer being used for sounding and tapping nuts, etc., to see if same are cracked or loose.

Guide shoes should be in proper alignment with guides and if too much play is found, shoes may, if not too badly worn, be relined, but if badly worn, should be replaced with new ones. If guides are of wood and badly worn, which may be noticeable above the bottom lining, or where the car has the greatest amount of travel, then the required repairs should be made to partly reduce the shock of a loaded truck being moved onto the car. Moreover, guides must be in good order to ensure that safety catches will grip in the event of car falling. The safety catches are more easily examined if car is at bottom of shaft. If the catches are of the drum clamp type operated by the speed governor, pull out the cable and set the catches. Examine the contact with the guide with flashlight, get from under the car and request operator to start the car downwards and slacken the hoisting cables slightly. This test will show you whether the safety catches are operating. Subsequently tighten the hoisting cables and wind up the drum on the underside of the car. If the catches on the underside of the car are the spring type, do not attempt to set them unless you have the necessary apparatus and men to reset after testing. If the safety catches are located on the top cross beam it will be necessary to place a block under the car floor and drop the car till cables slacken. The car should hold in place after the block is dropped out. After testing, examine your guides to see if there are any scars left through the operating of safety catch.

To examine cables the type of car must be considered and location of machine. On a traction type of elevator the cables can be satisfactorily examined by riding the cross beam at the machine and stopping the car at intervals. All nuts, clamps and bolts should be examined as well as lead sockets and edges of clevices, and signs of broken wire in cable at those points can be accepted as a warning that a new cable should be installed. Should elevator have a counterweight attached to the drum and cars similarly equipped, cables for both counterweights can be inspected from top of car, but hoisting cables must be inspected partly at the machine, as only one side of cable can be seen at drum by holding a small mirror behind the cable near floor of pent house, or other places out of danger, and directing a flashlight on the mirror. In this way wear and tear on the surface of the cable can be plainly seen and the method is better and safer than drawing the fingers along the cable to discover broken strands.

Hydraulic elevators require somewhat different treatment. Easy inspection is facilitated by moving the operating lever a trifle off centre and running the car slowly. Examination of the cables of horizontal hydraulic elevators can be carried out quite easily at the machine itself, especially if there is a series of pulleys travelling at different speeds.

Inspection of vertical cylinder machines is a different question and riding the travelling sheaves for that purpose should be avoided. Some kind of platform should be erected to make inspection of this type safe, although this is

sometimes difficult, owing to lack of space in the hatchway. There is no definite rule for condemning cables of any kind, the person experienced with the use of wire rope being the best judge.

The life of a cable depends to a great extent upon the care given it, the condition of drums and sheaves and the amount of use the car receives. Ordinarily five broken wires of the same strand in the same cable, together with other broken wires in the same cable, whether singly or in groups in other places, are sufficient to condemn the cables. Less than that number, however, would suffice in the case of a passenger car operating every minute of the working day. An inspector should never use a tool to open a cable to see if it is rusty on the inside. The use of such a tool is bad for the cable which does not resume its former twist, and will more than likely be bruised when passing over drum or sheave. Langs lay cables need closer inspection than the regular lay cables in order to discover the number of broken wires. When at the top of the hatchway, trip the limit switch while the car is in motion, asking the operator to set the car switch at neutral before replacing. If the slack cable device is located on the machine, test this when car is in motion, preferably when travelling downward and near bottom of hatchway.

Examine all electrical equipment carefully. See that there is sufficient lubrication, and watch for any loose play when the car is stopped. Keep thrust bearings in good condition, also worn gears. The governor cable should be inspected as frequently as other cables. When the car is at full speed the governor balls should open half way to the extreme distance required to set the cable so that runaway speed of the car is not necessary to operate the safety catches where this type of governor is used. On other types of governors it is good practice to lift the governor rope off and spin the governor by hand. Note the speed to trip this and compare it with the maximum speed of the car when going down with a full load.

Most elevator accidents occur at the elevator entrances on various floors. Gates and doors should therefore be in good working order and positively closed and locked before the car leaves the floor level.

Boiler and Vessel Explosions

Explosions of boilers and vessels covered by section 57 of the Factory, Shop and Office Building Act have occurred as follows during the year:

On January 6th, 1924, a low pressure cast iron steam heating boiler exploded in a Windsor store, causing damage to the extent of $6,000 and injuring one person.

On May 10th, 1924, a small 14-h.p. portable boiler, used at this time for local custom sawing, exploded, injuring one of the four employees by breaking the knee cap.

On August 12th, 1924, a small 12-h.p. boiler exploded in a cheese factory, with fatal results to the owner and two others, also injuring a fourth person.

On September 25th, 1924, a digester exploded in a paper mill causing quite a heavy financial loss, also a slight injury to one of the employees.

While dealing with this question of boiler and vessel inspection, the claim is often made by those who should know better that low cast iron pressure heating boilers do not explode. Records collected from 1903 to 1924 disprove this claim and show that nineteen such explosions occurred, causing a great financial loss, as well as killing one person, maiming others for life, and injuring others less seriously.

Safety Congress Meeting

Inspectors A. W. Holmes, H. A. Clark and Mrs. E. Gurnett attended a meeting of the National Safety Council in Louisville, Kentucky, September 29th to October 4th, 1924, where 2,000 delegates met to discuss the problem of eliminating accidents as far as possible. The following subjects were taken up: Fatigue, cement, chemicals, construction, education, paper, pulp, petroleum, rubber, metal, working plants, overhead electric travelling cranes, dust, explosions and the safeguarding of miscellaneous dangerous machinery. Such meetings are very beneficial in securing an interchange of opinions, also viewing safety appliances, all of which harmonize with the success of a Factory, Shop and Office Building Branch administration.

The volume of work accomplished by this Branch during the year is illustrated in the following tables, and information regarding accidents with the causes of fatal accidents is also given.

	Year 1923	Year 1924
Total inspections	18,106	18,935
1st "	10,135	11,288
2nd " or revisits	7,971	7,707

Included in these are investigations of accidents and complaints.

In addition to the above inspections there were special visits incidental to inspection, also inspection of buildings at Exhibition Grounds and delivery of 156 contract clothing permits.

Employees in above industries, mercantile establishments and office buildings numbered 272,949.

Year	Males over 16	Males 14-16	Females over 16	Females 14-18	Children under 14 dismissed	Total
1923	180,416	763	71,912	2,973	48	256,112
1924	193,093	637	76,211	2,988	20	272,949

Hours of Labour per Week

Males					Females				
45	50	54	58	60	45	50	54	58	60
84,464	39,207	25,181	2,469	19,044	56,582	13,535	4,712	238	2,149

Also, 10,107 employees, male and female, working approximately 50 hours per week. Hours of 84 males and 71 females too indefinite to record.

Orders issued relating to the various requirements of the Act totalled 8,025 as compared with 8,124 in 1923.

Permits

There was a decrease in the total number of applications for permits which were granted, as follows:

Year	Regular Sec. 34	Bakeshops Sec. 70	Fruit Camps Sec. 40	Sale of bread manufactured outside of Province Sec. 69	Total
1923	383	14	9	..	406
1924	215	33	21	7	276

There was also a decrease in applications for permits under Section 52, 165 being issued in 1924 and 345 in the year 1923.

Complaints

Complaints numbering in all 137 did not differ very much in substance from those of former years. A little more than 40 per cent. of those coming within the jurisdiction of the Branch were upheld on investigation and were not difficult to adjust. Subjects of complaints are as follows:

Year	Heat	Elev.	Fire Prot.	Child Labour	Lava-tories	Sani-tation	Boilers	Guards	Vent-ilation	Over-time	Min. Wage	Viol. Eng. Act	Fumes, Dust, etc.	Misc.	Hours Labour	Total
1923	46	3	3	7	16	6	13	8	2	4	4	20	7	16	9	164
1924	35	5	7	1	12	10	9	1	4	6	1	12	8	20	6	137

Explosions

During the year reports were received of three boiler explosions causing injuries to employees and of one rotary digester resulting in injuries to an employee. A report was also received of an explosion in the furnace of a heating boiler caused by an accumulation of gas after burners had been extinguished and which exploded on re-ignition of burners. No one was injured. Two large gasoline tanks exploded during a fire which spread to part of building where storage tanks were kept, burning several firemen.

Prosecutions

It was necessary to take proceedings in a few instances to enforce compliance with recommendations. In three cases matters were settled out of court and charges withdrawn on promise of compliance. In one case conviction was registered and a fine of $50 imposed.

Action was taken as follows:

For failure to provide lavatory accommodation	2 cases
" " fire escape	1 case
" " elevator safeguards	1 case

Violations

Violations of Acts, in the enforcement of which the inspectors have a responsibility, were submitted as follows:

Of the Stationary and Hoisting Engineers' Act	144
Of the Steam Boiler Act	44
Of the Adolescent School Attendance Act	73
Of the Minimum Wage Act	2,335

Accidents

Four thousand seven hundred and eighty-seven accidents were reported during the year 1924, fifty-one of which were fatal, as compared with 4,788 reported in 1924, with seventy-one fatal.

Fatalities were due to:

Burns and scalds	5	Belts, pulleys and shafts	5
Electricity	4	Gears	2
Elevators	4	Lathes	1
Engines and cars	1	Other machinery	5
Explosions	2	Presses	1
Falling substances	6	Saws	3
Falls	5	Winders	1
Flying missiles	1	Other causes	1
Jammed between or against articles	2	Drowning	2

PROVINCE OF ONTARIO—FACTORY INSPECTION BRANCH

Report of Inspector R. Albrough

During the summer months the inspection of saw mills occupied a great deal of time and owing to the extensive territory covered, only one visit was made to most of the mills during the season. It may be reported that conditions in general with regard to safety are improving. It has been a practice to impress on the foreman and those in charge the importance of having all guards replaced after removal for repairs, and all dangerous places made safe after overhauling the mill during the winter, instead of waiting until the inspector issues orders to that effect. In a number of cases the foremen or millwrights point out the work done in the interest of safety and their co-operation in this matter is much appreciated.

Every effort has been made to locate all boilers that are not insured in a registered boiler insurance company and to have them inspected annually by a certified engineer, as well as all air receivers such as are used in garages. Domestic range boilers once used in garages for air storages have been replaced in practically all cases by a more substantial type of tank. The annual inspections are carried out promptly usually, but in the out-of-the-way places there is difficulty in getting an engineer to make an inspection prior to commencing operations. Such operators have been encouraged to have an inspection made during the winter and stricter compliance with this phase is anticipated.

It may be justly stated that there is practically no child labour in this part of the Province since the industries are of such a nature as to require employees of mature years. Special attention has been given the saw mills where there was at one time a tendency to employ children, with the result that the management now conforms to the law in this respect.

The Stationary Engineers' Act is being well observed, very few violations having been reported and it is gratifying to find that the provisions of the Act are being adhered to in the remote places.

A considerable number of mechanical interlocking devices have been attached to both passenger and freight elevators in the past year and the installation of others is in progress. Where these interlocking devices are installed there is a danger of openings in gates leading to elevator shafts being made too large, by employees breaking off rungs or slats in order to reach the operating rope. Openings made in gates for this purpose should only be made large enough to admit the hand and arm. This only applies to old gates, as it has been arranged with the elevator manufacturers to leave a space not exceeding four inches in all new gates.

Report of Inspector G. H. Bostock

In making a survey of inspection for the past year, it is a pleasure to be able to state that while many technical breaches of the Act have been notified, the general trend is to an appreciation of the necessity for the carrying out of its provisions. Faults of omission have been rectified and suggestions for better observance of the regulations have generally been met in a conciliatory spirit. Machines in the small saw mills scattered over the country are not always as well guarded as could be wished, but as these mills are portable and change their location several times in the season, compulsion is difficult.

The number of employees in this district is much less than last year, the wood-working industries especially having reduced their staff considerably. A feeling of optimism seems prevalent as to improved conditions for the coming year.

Elevators have received particular attention during the year, owing to the order requiring all elevators to be equipped with a device preventing the removal of a car from any one floor until all gates are closed. In some cases opposition to the order has developed, but as the result of this requirement is shown to have reduced the accidents throughout the Province by one-half, factory owners are becoming more reconciled to the added expense.

Ventilation problems have not been so numerous during the past year. Manufacturers and factory owners are becoming aware of the necessity of taking into consideration the different densities of the various gases, vapours, and fumes and are arranging their systems to meet each emergency as it arises, providing upward ventilation when the gases are lighter, and downward draft where heavier than air. By utilizing the difference in density as compared with air, the need for mechanical exhaust is less necessary, and it is satisfactory to know that as a consequence, atmospheres which have given trouble formerly have now been rendered much more wholesome. Some of the gases and vapours lighter or heavier than air, often met with in manufacturing processes, are shown at a glance by the following list:

Lighter than Air	Heavier than Air	
Acetylene	Oxygen	Benzine
Carbon monoxide	Alcohol	Benzol
Ammonia	Sulphurous acid	Chloroform
Hydrogen	Chlorine	Amyl acetate
Hydrocyanic acid	Ether	Nitrous oxide
Steam	Wood naphtha	Gasolene
Illuminating gas.		

A danger to health has recently been pointed out from a German source. It calls attention to the possible presence of hydrocyanic acid gas (one of our deadliest poisons) in the air above electro-plating baths, where a strong current of electricity is passing through the electrolyte, usually consisting of the solution of the metal in potassium cyanide. The electric current may, if strong enough, decompose or dissociate the cyanide compound, generating sufficient hydrocyanic acid gas to vitiate the air to the danger point, namely, one part in 10,000 of air. In this connection it may be pointed out that although tests for this gas have occasionally been made under the conditions indicated, it has not been possible, so far as the writer is aware, to detect any trace of the gas in electroplating establishments in Ontario. Care should always be taken to keep the strength of the electric current within safe limits.

Apart from the toxic properties of the above gases and vapours when inhaled, some of them are also highly explosive when mixed with air in certain proportions, the amount varying with each substance, for should the mixture come in contact with a spark or a naked flame an explosion may occur. Not only do gases and vapours explode from sparks or naked light, but certain dusts in a finely divided state will act in a similar manner when mixed with air in the right proportion. Among the more commonly occurring are the following:—Coal, cork dust, celluloid, lampblack, malt, sugar, wood dust, flour, starch. In flour mills especially is this danger always present, and precautions should be taken to prevent any accumulation on beams or other projections where dust can collect.

Large belts often gather static electricity and should be well grounded. Many of the fires from "unknown causes" possibly could be traced to this source. Several times the attention of the superintendent in flour mills has been drawn to the presence of "static" in the belts.

The danger to health from exhaust fumes in small garages could be lessened if a simple arrangement of ventilation were adopted; if an opening twelve inches square were made in one corner of the garage at about two feet six inches above the floor, and another one of the same size at the opposite corner about twelve inches below the roof, both openings being at the closed end of the room, a circulation of the air would be set up, and the dangerous carbon-monoxide gas, lighter than air, would escape through the top opening, along with much of the other vapours usually heated to a point which would cause them to rise, although in a cool state they would naturally be heavier than air and would pass out at the lower opening.

In ventilation, common sense with the aid of a little knowledge of the physical properties of gases and vapours would often enable a difficulty to be overcome without the expense of an elaborate mechanical exhaust system. The writer has several times suggested the syphon arrangement for heavy vapours where it is possible, as in photogravure industry, when closed tanks are used for the manipulation connected with etching, with evolution of nitrous oxide fumes which are heavier than air. An opening in the top of one side of the tank connected with a four-inch tube passing through the outside wall, bending downwards and reaching to from three to four feet below the level of the tank opening would cause the heavy gases to syphon, after the tube is once filled with the vapour, exactly as a similar arrangement in the case of water. This has been proved satisfactory where the work is carried out in an upper storey of a building. Care should, however, be taken that the lower leg of the syphon does not discharge near a window of the flat below.

The lighting of factories and workshops in the country districts is usually good, as the space between buildings is generally ample for all purposes.

It has been unnecessary to criticize the sanitary conditions, as the arrangements have been found satisfactory, except in isolated instances, and these have been promptly remedied.

Report of H. Bourne, Inspector of Foundries

During the past fiscal year trade conditions covering grey iron, steel, malleable, brass, bronze, aluminum and other alloy foundries have been so uncertain that considerable anxiety has been felt by both employers and employees. While a few appear to have had a fair year a large percentage have undoubtedly suffered from the general depression in the metal trades, although during the last two months employers seem more optimistic and an expression of faith of an early return to normal conditions seems most general. An illustration of this may be seen in the city of Hamilton, where a firm has just completed one of the largest and most modern equipped foundries on this continent, every consideration being given to the provision of adequate light, heat, ventilation, safety, sanitation and comfort of the employees. During the past year there has been considerable comment on the skilled mechanics leaving to work in the States. Workshops of this type do much towards preventing this and to encourage the return of a number of those who have left the Province.

During the year a number of improved conditions have been provided. This has been brought about by having the co-operation of employers. Attention has been given to the proper drying of ladles, hoisting tackle, molding flasks, cupolas, automatic limit stops on hoisting block, travelling cranes, molding pits, furnace pits, elevators and many other hazardous features in foundry practice.

Heating of these plants deserves every consideration. Under normal conditions the cast was depended upon to keep the shop warm, more particularly in those shops where heavy castings are made. This assisted to a great extent in keeping the shop warm, but during trade depression the tonnage in a number of these shops has materially decreased and a number of open salamanders are used, which throw off large quantities of gases which are injurious to the health of the employees. This objectionable feature is being eliminated with the co-operation of the employer and several steam systems have been installed. Where this could not be accomplished, furnaces and stoves piped to the outside of the building are taking the place of the open salamanders, which apart from throwing off injurious gases are very costly owing to the large amount of fuel they consume.

There has also been an improvement made in sanitary conditions in several of these industries, one of the large firms in the city of Toronto installing a modern wash-room with hot and cold running water, fountains, with liquid soap receptacles attached, and lockers which permit men to change their wet clothing before leaving the plant. A cafeteria has also been provided where a wholesome dinner can be had for a very nominal fee.

The provision of proper light in these plants is also a very important feature. Owing to the nature of the work large volumes of dust, smoke, and steam are in evidence during certain parts of the day, which if allowed to remain on the walls and windows soon give the inner part of the shop the appearance of a dungeon, making the work of handling metal and other materials extremely hazardous. This may be economically taken care of by cleaning down the walls and windows at regular intervals, and the interior sprayed with whitewash. The question of ventilation is always an important factor in all foundries and requires considerable working out. Weather conditions and location of building have a great effect on many of the plants and while a certain system may work effectively in one shop it may fail in another.

Report of Inspector W. T. Brennagh

It is regrettable to report that industrial depression, in some cases very serious, has been quite evident during the greater part of the year. A great many plants employing considerable help have ceased to operate and are still at this date remaining idle. In the face of this present industrial set-back it is pleasing to note the optimism displayed on every hand. Indications point to better times just ahead, when the wheels of industry will hum and business activity once more be enjoyed, which will tend to improve greatly the situation brought about by unemployment. It is an established fact, that when factories are busy and business generally is good, there is little difficulty in having recommendations complied with. The main feature of the work of factory inspection is the protection of machinery and dangerous places, or in other words, "Safety First," including all the principles which the term implies. This work has been well taken care of during the past year and all suggestions or recommendations along these lines were carried out very satisfactorily.

Safety appliances on freight elevators seemed to be the chief subject of discussion, and foremost among these was the device termed the "Elevator Gate Interlock," which made its appearance on the market about eighteen months ago, approved by all inspectors. In this district fully seventy-five per cent. of freight elevators are already equipped and operating to the satisfaction of all concerned. It is quite noticeable that so far no accident has occurred in

the district on any elevator so equipped. Elevators, particularly freight, are at all times a hazard, and when an accident does occur, it is usually of a serious nature. The main features of the gate interlock is to prevent the gate from being raised or opened except when the car is at the floor landing, also to prevent the operation of the car when said gate is open. It might be mentioned here that the Act states that no one under the age of eighteen years be allowed regularly to operate or control an elevator. The new "push button" elevator now manufactured by leading elevator companies is rapidly taking the place of the old hand rope operated freight elevator. The saving of time and labour, and the safety appliances connected therewith, are the distinctive features which it embodies. The operator merely pushes the button switch to start the car, and on releasing of the button, the car is instantly brought to a stop. This is a much safer method than the juggling of a hand cable in order to bring the car to the level of the floor landing. Gates are also equipped with the interlock device.

In shops and office buildings many passenger elevators are in constant use. These have at all times an operator in charge. It has been found on these elevators, particularly those of older type and construction, that the sliding doors at each floor landing could be left open and still the car would operate. This was considered as decidedly unsafe, and as a mechanical-electrical device can be attached to these doors to prevent them being left open, these elevators, when discovered, receive this attention and the management induced to install the equipment without delay. A few accidents have occurred recently, with respect to the above, which is an incentive to pay attention to this line of hazard, as found particularly in connection with enclosed passenger elevators.

In flour mills there is used an elevator of the endless belt type, commonly called the "Humphrey Elevator." This means of transportation is perpendicular, steps and hand-holes being placed at intervals on the upright belt, with only sufficient room to accommodate one employee, who in using same, steps on and off, while the belt is in continuous operation. This type of elevator is at all times dangerous, but is not allowed by law to operate, unless equipped with a safety rope on either side the full length of belt, by which, with a slight pull, the belt can be immediately stopped. The openings through all floors are well protected with railings and the speed regulated so as not to exceed seventy-five feet per minute.

The sanitary equipment in factories is well established and ample accommodation provided for all employees. During the year past much improvement and many installations of conveniences for both sexes have been made in shops, for it is here that this line of work requires considerable attention.

The Adolescent School Attendance Act is well looked after, being ably assisted by the local school attendance officer, while the Minimum Wage Act, effecting only females, is giving very little trouble, and few complaints are received. The wage schedules are being posted in all factories and shops where females are employed.

In the district there are thirty-three canning, jam and preserving factories, all of which were carefully inspected at the season of the year when they were the busiest and all found in good condition. While employees were kept working full time it was not found necessary to issue many overtime permits as abundance of labour appeared to be available in order to take care of the fruit and vegetable crops. About ten or twelve fruit camps in the district were in operation during the season in the harvesting of the fruit crop. These were inspected and received permits, and were maintained in a proper manner, under the "Regulations for Camps for Women Workers."

In the matter of inspection of pressure vessels in above plants, insurance has been placed on all steam vats, copper kettles, etc., and same are periodically inspected and tested. Considerable attention has been paid to the inspection of garage workshops and tire and vulcanizing establishments where air reservoirs are constantly in use. As required by the Act, these must be annually inspected if they do not carry insurance. About 60 per cent. of these vessels were found to be domestic galvanized-iron, hot-water heaters, and carrying a pressure of air from 100 to 125 pounds, in many cases installed by plumbers. As these were considered by the Steam Boiler Branch very dangerous for air pressure in excess of fifty-five pounds, it became necessary to condemn many found in use; consequently they were replaced in all cases by government tested reservoirs. Steam boilers in use are well looked after by way of annual inspection, as about 98 per cent. of them are insured, thereby receiving two inspections a year. The balance are inspected principally by stationary engineers having the required qualifications and signed reports are forwarded to Factory Inspection Branch annually.

Comparatively few complaints, with regard to the Stationary Engineers' Act have been received during the year. This district appears to be well supplied with qualified engineers.

Report of Inspector H. A. Clarke

The matter of safeguarding machinery has had careful consideration and special attention has been given the study of improved guards for all kinds of wood working machinery with good results. Several changes in the ventilation of factories and garages have been accomplished and a number of fire escapes have been added. In new buildings, however, the erection of tower stairways is being urged as being more satisfactory exits in case of fire. Seven hundred and ninety gate locking devices have been put on elevators in this district and not an accident has occurred on any elevator equipped with such a device. Two men were killed in accidents which would not have happened if gate locks had been put on the elevators concerned.

Report of Inspector W. S. Forster

During the year 1924 approximately 100 towns and villages have been visited and 1,150 establishments reported on. This includes second calls in some cases. As a result of these visits 275 recommendations for protection in accordance with the Factory, Shop and Office Building Act have been carried out. It is cheering to note the spirit of co-operation shown by employer and employee on one side and employer and inspector on the other. From this it may be concluded that the provisions of the Act are reasonable and sane and that the work of inspection is being prudently undertaken. Some employers are willing to go further than the Act requires.

The mechanical locking device on elevators has proven a great success and has been the means of preventing many accidents and saving lives. Proper and efficient boiler inspection is most important and difficult to secure as it is often hard to obtain the services of a duly qualified boiler inspector. The importance of this question, however, demands that the difficulties be overcome and that every step be taken to secure the desired end.

Child labour has practically become a thing of the past. This year only two cases were found where boys under fourteen years of age were employed

and these boys were employed by sub-contractors. Some difficulties are still experienced in regulating hours of labour for remale employees in restaurants, especially those managed by foreigners. A great improvement in the conditions in Chinese laundries may be reported. This is largely due to repeated calls by the inspector and to the willingness of the Chinese to be law-abiding citizens in living up to the provisions of the Act, when these have been properly explained.

Each year leaves behind a record in improvement in the conditions under which employees labour but the desired goal has not yet been reached. Each improvement suggests another and, with the upward trend of business which most employers report and hearty and sympathetic co-operation of both employers and employees, it may be confidently predicted that the record for 1925 will surpass that of 1924.

Report of Inspectress Eleanor Gurnett

That the work of a factory inspector may become an enormous contribution to human health, comfort and happiness is apparent when one realizes that conditions of industry, not only completely control the lives of multitudes but affect in some measure every life in the country to-day. It requires persuasion, perseverance and patience as well as tact on the part of an inspector to see that the Factory, Shop and Office Building Act is observed. When one asks that more up-to-date sanitary conveniences be installed, suggests that a coat of paint would vastly improve things, or that any such improvement be made, it means the expenditure of a considerable sum and the one spending the money must be convinced that the results obtained, while not actually to be calculated in dollars and cents, will in the long run mean greater production.

An ever increasing number of employers are keenly alive to the fact that improved working conditions mean better health, greater efficiency, hence greater production bringing prosperity to all. Many factories in this district have commodious recreation rooms, some with pianos or victrolas, rest rooms, lunch rooms, cafeterias where a full course meal is served at cost or where a cup of tea, coffee or a glass of milk may be had to accompany the lunch brought from home. Quite often there is a registered nurse in charge of the hospital room, a trained social worker who directs the social activities of the girls. In summer there are picnics, hiking trips, softball, basket ball, tennis or bowling clubs; in winter glee clubs, indoor bowling and dancing. The sick are visited and the general welfare is under her guidance. Group insurance savings accounts and profit sharing schemes are other good things of which many take advantage.

One of the greatest difficulties that an inspector has to contend with is the factory which is established in an old building originally built for a warehouse. Conditions in places of this sort are often very unsatisfactory, necessitating frequent visits and inspections. Invariably the rooms are long and narrow with windows at either end making it necessary for those away from the windows to work all day under artificial light; not infrequently the front windows have been entirely shut off by partitions in making show rooms and offices. Toilet accommodations are not all one would like, the smallest space allowable being used. There may be only one on the factory floor; the toilet for men will be in the basement some three floors down. If an inspector thinks that both men and women use the one toilet the employer is ordered to put a lock on the door and see that only female employees use it. Fire escape approaches are another source of trouble; pressing tables, packing boxes, heavy hat forms, pieces of machinery are some of the obstructions cluttering the passageway to the windows.

Even the sills have been found piled with all manner of things. Industry is slow in learning that order is heaven's first law and fire escapes of all places must be kept clear of all obstructions. In some of these old factories the heating in winter is inadequate and in summer the heat is intense.

Contrasted with these places are the new type of factories with all four sides practically of glass, flooding the rooms with light and air. One factory of this sort has the floors all highly polished, work tables enamelled a bright colour making gay spots wherever the girls work, and the toilets and rest rooms might grace any club. Needless to say employers such as these believe that light, sun, order and beauty are as powerful preventives of evil, as darkness, dirt, disorder and ugliness are incentives to evil.

Where necessary all machines operated by females are equipped with safety devices or protected with boards or strong wire netting. It is gratifying to note that there was not a fatal or serious accident to a female employee in the past year. Of course women are not employed in as hazardous occupations as men and are more careful of taking any unnecessary chance. Two prevailing fashions, bobbed hair and short skirts, have minimized two great causes of accidents to women, the possibility of having their hair or skirts caught in pulleys. At the annual meeting of the Safety Congress held this October in Louisville, Kentucky, it was stated that "safety devices on machinery are not asked for by labour but are imposed on labour to conserve human life, and it was necessary for all employees to co-operate with employers and safety engineers in working to make the factory as safe for the worker as is humanly possible." Most fatal accidents in factories are caused by disregarding rules laid down for safety.

Several investigations have been made regarding the hours of girls in restaurants, tea rooms and cafeterias. Eight or nine hours is the usual day except Saturday which has been found to be longer in many cases than ten hours. Millinery, shoe, women's wear, bakery and grocery shops are the chief offenders in working girls a longer day Saturday than is permissible. Permits for overtime work have been granted to many industries needing them. These are not granted unless urgent, for no inspector wants to encourage overtime work. Some cases of factories working without a permit have been reported. On investigation it has been found that a new time-keeper, foreman or superintendent unfamiliar with the regulation has just gone along without making inquiry. Criticism has sometimes been made of issuing permits for overtime work when so many girls are out of employment, but when a rush of work comes it is the experienced operator that is needed and machines can only have a certain number of workers. In one large factory a canvas of the girls was taken regarding night work, the suggestion being made that a half hour earlier in the morning and another half hour longer in the afternoon would do away with overtime. As one they voted against lengthening their day, contending that overtime work was only for a short period and not for all the female employees. If the extra hour were added it might be hard to go back to a shorter day.

It is the rule rather than the exception that chairs with backs are provided for workers who sit at their work. The large stores have folding seats for employees and girls state there is no objection made to using them when not busy. Smaller stores provide ordinary chairs for the girls.

Minimum wage cards are posted in practically all industries where females are employed. A card has sometimes been found hanging in the office where the girls seldom go, but in such cases it has been ordered to be conspicuously posted where the girls work. In some places it is framed and hung by the time clock where all may see it.

Report of Inspectress Nellie Hamilton

Conditions have improved in most of the factories in this district and the majority of managers are only too willing to co-operate if shown that improved conditions for the employees will give better results as regards production. Several freight elevators have had safety locks put on gates, preventing gates being opened until elevator is level with the floor. Factories and office buildings have been found usually well equipped with fire escapes, but it is necessary for the inspector to see that exits are kept clear and windows easy to open. All employees should be instructed as to the exact location of fire escapes and in addition signs or lights indicating "fire escape" should be installed. The mode of bobbing hair, which makes it less apt to catch in machinery and belts, has given inspectors less cause for worry, and the installation of individual motors is doing much to prevent accidents by doing away with the overhead belting. Constant vigilance is necessary in seeing that guards on and about machinery are not left off through carelessness.

The Adolescent School Attendance Act is being well enforced by the school attendance officers and many children in this district are enabled to stay at school longer through the provisions of the Mothers' Allowance Act. Factories have been found more reliable than stores in the matter of posting Minimum Wage orders.

Report of Inspector A. W. Holmes

Very few of the factories visited have been working to capacity and few applications have been made for overtime permits, which were not granted without good reason. A great deal of time has been devoted to the matter of having locks installed on the gates of all freight elevators. The source of greatest danger about a factory, especially where a number of tenants occupy the same building, is the unguarded freight elevator, which everybody is allowed to operate. The gates are left open or nailed up and it is impossible to find out who is responsible. However, the locks now being installed by the different lock manufacturers are working out very well and no doubt have decreased the hazard and reduced the number of accidents very materially.

Great strides have been made along the lines of sanitation and ventilation and very few complaints are to be made in this respect. The heating of factories is not always up to the mark, especially where there are absentee landlords to be dealt with who are not interested in the production end but in the saving of a ton of coal or a barrel or two of oil. One landlord expressed the opinion that all girls should be compelled to wear sweaters when at work. The clause governing the inspection of steam boilers and vessels under pressure is fairly well carried out as a very large proportion of these boilers are looked after by the boilder insurance companies.

It was a great pleasure to attend the National Safety Convention held in Louisville in September, when over two thousand delegates were in attendance from all parts of the United States and about half a dozen from Canada. The safety movement has made great strides in the last few years and at this convention almost every industry was represented by presidents, managers or foremen of the large corporations working earnestly for the welfare of those employed in these industries. The Secretary of Labour, Washington, read a paper on "Safety in American Industry," wherein he promised to have legislation passed to make possible the securing of facts dealing with industrial accidents in the

United States and proposed asking the Federal Congress for the authority, the men and the money to enable the undertaking of real industrial safety work.

Another paper dealt with the development of the safety movement in the past decade, showing how much had been done in that time to improve conditions. It was pointed out that legislation even of the most satisfactory kind must be supplemented by the education of workmen, foremen, superintendents, plant managers and owners, since many accidents can not be guarded against by any mechanical means. An analysis of more than a quarter of a million accidents in the plants of the United States Steel Corporation showed that hand labour was responsible for 44.04 per cent. of these accidents. The use of mechanical safety devices or appliances could not possibly have prevented the majority of these accidents which were due to carelessness and the failure of workmen to follow simple safety precautions. The only remedy for such conditions is thorough education of the individual workman in safe practices.

Report of Inspectress Gertrude E. Hornell

General conditions have not improved materially for either employers or employees this year with the exception of the last two months of the year, when business improved slightly in some lines and a number of the unemployed were able to get temporary work. Few overtime permits have been issued which is to the interest of both employers and employees, both having expressed the opinion that overtime is injurious to health and consequently inspectors endeavour to discourage it as far as possible. Trouble is still encountered in retail stores and restaurants where there is a tendency on the part of the store-keepers to employ their help more than ten hours in one day. Considerable time is spent trying to adjust this matter which requires close attention.

Sanitary conditions are improving but employers often require considerable persuasion and several inspections have to be made before the desired result is obtained. A complaint has to be made occasionally that the premises are not properly cleaned, due to careless employees and those found negligent are inspected frequently. In some small towns sanitary conveniences are not all that could be desired as no sewerage system exists.

The regulation requiring female employees to have their hair securely fastened to their head or confined in a cap or net to avoid coming in contact with machinery is at present difficult to enforce, the general excuse now being that "bobbed hair" modifies the danger. Where a strict forelady is in charge in one establishment every female employee wears a cap.

Most of the canning factories in this district have good sanitary conditions. One factory is a model of cleanliness which provides oilskin aprons, keeping them in a proper state by frequent washing. There is a tendency in canning factories to employ children and several visits are necessary to overcome this practice. A few cases of children under age were found during the strawberry season, but upon advising those in charge of existing regulations the children were promptly dismissed. The enforcement of the Adolescent School Attendance Act has not been difficult this year. Manufacturers are upholding the Act and not employing children between the ages of fourteen and sixteen years without the necessary permit.

The Minimum Wage orders covering the scale of wages in the various industries are being posted in more conspicuous places.

Guarding of machinery is being carried out continually with a view to the protection of employees. It is regretable that carelessness is often shown by not replacing guards removed while machine is under repair. Skirt guards

are sometimes removed, which is dangerous to operators, especially if it is necessary to reach under the machine table. It has been difficult to convince some employers that backs should be provided on all seats used by women, even if not in constant use it is there to relieve the strain occasionally.

Report of Inspector Robert Hungerford

The year just closed has not been the most encouraging to the people of the Province from the standpoint of business prosperity. There has undoubtedly existed a feeling of uncertainty and uneasiness among commercial and manufacturing circles regarding the conditions of trade, and the apparent lack of confidence continued until towards the end of the year when a favourable change took place and people felt assured of the industrial stability and commercial soundness of the Province.

There are many phases of factory inspection work and to become efficient in each department coming under the care of the factory inspector requires a great deal of study and attention. Inspectors are frequently called upon to discuss ways and means of improving conditions, in consequence of which the necessity will be seen of efficient general knowledge on such subjects as proper sanitary conditions and how to obtain them, the best lighting of factories, the exhausting of fumes, gases and dust, proper ventilation, the practicable guarding of dangerous machinery, the protecting of pulleys, belting, hatchways and stairways and safety devices for elevators. Conditions in the factories of to-day are vastly different from those existing at the time the first factory inspectors were appointed. Child labour has been almost entirely eliminated and employers, by education, conciliation and in a few instances by compulsion, have become desirous of having the best possible conditions in their factories.

Elevators are a part of factory equipment with which inspectors have had endless trouble as they have been the cause of so many accidents. Owing to the frequency of such accidents the installation of mechanical locks has become necessary. These prevent the operation of the car while any gate in the shaft is open and the opening of any gate except that one at which the car is standing. Thousands of these locks have been installed and are working satisfactorily. Cars have been provided with hoods to prevent anything falling on the operator, sides have been put on cars to prevent contact with counter weight or shaft projections, and governors to prevent speeding have been added as well as the toe boards and mechanical locks.

This district extends well into the lumbering country and all sawmills known to be operating in it were inspected during the past summer. Generally speaking these were found to be in good condition and the mill owners willing and anxious to co-operate in making conditions as satisfactory as possible. Because of the temporary character of many sawmills, it is difficult to keep track of them and to check up all the boilers to see that they are inspected annually.

Co-operation among the men employed, the employer and the inspector is the chief requirement of successful factory inspection and is essential if safety devices, no matter how desirable, are to be lasting and effective. In reading published reports on industrial accidents throughout the Province one might be led to the conclusion that the number is on the increase. This, however, is not the case but rather that all accidents are now reported. There is no part of the work to which greater attention has been given than to the prevention of accidents, and manufacturers have co-operated in spending time and money on devising schemes and carrying out suggestions in order to reduce hazard.

Report of Inspector S. J. Mallion

Working conditions in the various shops and factories are good, the standard set by the Factory Inspection Branch has been well adhered to, and safety and cleanliness have been recognized by all employers of labour as essential in the carrying on of industrial propositions. During the warmer months many industries in the rural sections were inspected, among the number being thirty butter and cheese factories. These plants were sanitary and kept in good condition. All canning factories were also inspected and found to be in satisfactory working order. No child labour was observed and overtime permits were necessary in some cases owing to the backwardness of the ripening season.

The work of installing interlocks on elevator gates is being done as quickly as possible and it will not be long before all gates requiring these locks will be equipped. During the year 132 recommendations were issued for the inspection of steam boilers and pressure vessels. The work of seeing that these recommendations are carried out is still a problem as owners fail to realize that this inspection is compulsory and must be done annually.

Accident prevention has received serious attention at all times, and while it cannot be denied that many accidents have happened, neither can it be concealed that, by the continuous safety first educational campaign, combined with the numerous safety appliances installed, a great many accidents have been prevented. It is impossible to prevent all accidents, since they will occur so long as there are men, women and machinery but with reasonable care on the part of all concerned the number could be reduced materially.

Report of Inspectress Jean W. Ogilvie

At no time during the year has there been found any disposition on the part of employers of labour to defy the law. There are still, however, some employers who do not deem it their duty to look after the general welfare of their employees until the inspector has pointed out ways and means of making it possible for employees to have better working conditions. Much good work has been accomplished, complaints have been few and were promptly adjusted. In comparing the recommendations of 1923 with those of 1924 a decided improvement is apparent everywhere in factories, shops and office buildings. Several factories are conspicuous examples, not of what might be, but of what has really been accomplished in improving conditions and providing comfort for workers. Kitchens, lunch rooms, cafeterias, rest rooms, libraries and smoking rooms for men are some of the more important things that have been provided in these factories. These stand out as a standard for others to follow and show what can be done when employers take an active interest in the welfare of their employees. Most employers in this district are giving careful attention to the prevention of industrial diseases in factories and are doing all in their power to keep workers in good condition since they realize that the best service is secured from these workers when in healthful sanitary surroundings.

The law regarding the limitation of the hours of female workers to ten hours per day and sixty hours per week is another matter which requires careful attention, for much depends on the health and comfort of the future Canadian mothers. Overtime work should be avoided if the usual day's work stops just short of undue fatigue. In addition to its affect on the workers, it is apt to result in an increased amount of spoiled work, lessened output and an increase in the number of absences on subsequent days. Few permits have been issued

for overtime work and none without good reason. Factories to-day with high speed machinery and higher working tension of the operator make shorter working hours more necessary.

Child labour has been greatly reduced and at the present time very few boys and girls under the age of sixteen years are employed in factories in this district.

Report of Inspectress A. Reddick

Trade and general industrial activities have been much depressed during the year, with many factories working under capacity, either a short day or closed down at times. In spite of this every evidence of a gradual marked improvement has been found in general conditions pertaining to sanitation, ventilation and the welfare of female workers in factories, shops and office buildings. It is gratifying to report a continued improvement in co-operation of the classes concerned and the Factory Inspection Branch. Each employer must be studied and much tact is required in bringing about the desired results with the right spirit of mutual interest without creating offence. In this district it has not been necessary to resort to prosecution during the year.

The section of the Act regarding hours of labour seems to be well taken care of with but few exceptions. The greatest problem in this connection is with some store proprietors and restaurateurs, who find it difficult to regulate the hours of labour of their help owing to public demand. When notices in this regard have been sent out to employers, most of them have complied at once. In several cases employers of lunch rooms were not allowing the girls a full hour for meal time, and it was necessary to make frequent calls to remedy this condition. It was suggested that girls working in this capacity be allowed not more than ten hours on the premises, since their meal time is often broken by interruptions caused by incoming patrons requiring attention.

The homes visited were in most instances found to be in a fairly satisfactory condition, not a permit being refused for lack of cleanliness. In one case of illness which resembled scarlet fever the permit had to be withheld until the doctor had diagnosed the case and could certify that there was no danger of infection. Many complaints regarding prices paid for home work have been met and requests that a minimum scale of prices be set. One great difficulty in supervising these homes is the frequent changes of address which necessitate many calls in connection with the one inspection.

The need for proper ventilation in work rooms and shops is a very important problem which is deserving of special attention. In some stores located in old buildings in particular much trouble is experienced in this regard, there being no ventilation except for the front and back doors which create severe and dangerous draughts in cold weather. Changes remedying these conditions have been effected by having all rooms ventilated when possible. In most modern buildings now being constructed good ventilation is receiving proper consideration. The health of the workers depends for the most part on the lighting, ventilation and cleanliness of the building in which they work.

The amendment of the Factory, Shop and Office Building Act of 1921, which calls for suitable chairs for female employees in factories and offices as well as shops where in the opinion of the factory inspector a substantial portion of the work can be efficiently performed by the girls when seated, has added greatly to the comfort of the women and girls and, as definitely demonstrated by one firm, has brought about greater efficiency and increased production. Much difficulty has been encountered in bringing many members of firms to

see the necessity of this provision as they have considered the effect would be to encourage idling among their employees. The result of the work done along these lines has, however, been gratifying and nearly all firms in this district have provided chairs with backs for female employees.

Many warnings have been given as to the danger of not having females wear caps or have their hair arranged close to their head, although the present fashion of bobbed hair has decreased this danger to a considerable extent. During the past year very few children under the age of fourteen years of age have been found employed in factories. The Adolescent School Attendance Act has been largely responsible for this improvement. This Act requires that children under the age of sixteen years be provided with a permit from the school board before being allowed to leave school.

The work of a factory inspector is not, as might be supposed, confined to general or occasional visits at the time of inspection of factories, shops or office buildings, but may require repeated visits at intervals to accomplish the desired co-operation or enforcement of the Act as set forth. Greater co-operation and improvement in the welfare of workers in industry is being noted from year to year.

Report of Inspector H. Stevenson

At least one inspection has been made of all the factories in this district and an improvement in conditions may be reported from the point of view of safety. There have been fewer accidents due to machinery and in some cases investigated these were caused by workmen going to make repairs without taking the precaution of first shutting off the power. Machinery was found to be fairly well guarded and any recommendations or suggestions concerning such were promptly carried out. Carelessness in not replacing guards that have been taken off machines has often been discovered and in such cases they must be replaced during the visit of the inspector, who calls the manager's attention to the matter with the result that special orders are issued to foremen to have all guards kept on machines during operation. The recommendation regarding the order to have interlocking devices placed on gates of freight elevators has been carried out in most instances.

There are a large number of canning factories in this district and two visits have been made to each during the canning season. The managers of these have endeavoured to keep them in a safe and sanitary condition, having dangerous places well guarded and all machines washed out every day. Seven new canning factories have been established in this district during the year, the owners of which have shown a willingness to co-operate with the Factory Inspection Branch. One of these plants was started at Branksome Lake, one at Brighton, two at Smithfield and one at Cherry Valley. Other new factories include two woodworking plants in Oshawa, a whitewear factory at Trenton, a machine shop and foundry for the manufacture for paper and pulp machinery at Belleville, a new electric goods plant at Picton, and a baby food factory at Belleville. The managers have had carried out all the suggestions made on the inspection of the firms.

It is pleasing to report that no case of child labour has been found during the year, and in accordance with the Adolescent School Attendance Act, all young people between the ages of fourteen and sixteen held permits issued by the school attendance officers. The managers of some factories are still found to be remiss in regard to posting the orders issued by the Minimum Wage Board. Steam plants visited have been reported to the Stationary Engineers' Board

and the Act found to be generally well observed. A great deal of attention has been given in seeing that all steam boilers and pressure vessels are inspected annually as required by the Steam Boiler Act, as there is a tendency for owners of uninsured steam boilers to wait until the factory inspector orders such an inspection. Two complaints were received concerning the working of females overtime without permit. On investigation one complaint was found to have been made without just cause and in the other case the overtime was due to delay in the drying process, which the manager agreed to change on being informed of his infringement of the law. This overtime work had not resulted in a working day of more than eight hours but in working the women after 6.30 o'clock.

Report of Inspector H. J. Tutt

The education of employers and employees in the principles of the safety first movement is an interesting process and the achievements of the past year may be attributed to their interest and the assistance they have given. The feeling of indifference which was formerly an obstacle to the inspectors' work is gradually giving way to one of interest, and superintendents and foremen are insisting on the necessity of creating a desire among their employees to protect themselves and others. It is an inspector's duty to impress upon the minds of all concerned the importance of caution and foresight in the reduction of accidents. The proper guarding of dangerous machinery or places should be insisted upon, and it may be pointed out to employers that the increased value of production due to the installation of such safety appliances will justify any expenditure incurred. There were fewer elevator accidents during the year, which may be attributed to the fact that many elevator gates were equipped with safety locks. Careful attention was given to the matter of fire escapes and exits and an improvement in this regard may be reported.

Report of A. J. Wright, Inspector of Polishing, Buffing and Grinding Plants

The inspection of factories where polishing, buffing and grinding are carried on, which calls for visits to practically every part of Ontario, has revealed the fact that factories have been busy for only short periods at a time. The jobbing shops seem to be favoured with the greater part of work in this line, which is sent to them by the different manufacturers to be finished and includes such work as bumpers, radiators, shells, headlights and other automobile accessories. Manufacturers of electric fixtures, stoves and novelties, which consist mostly of brass ornaments, have been fairly busy, while manufacturers of agricultural implements, aluminum ware, silverware, builders' hardware and plumbers' supplies have been less fortunate in this respect. Their employees have had irregular working hours, in some cases as low as twenty-four hours per week. Many manufacturers, however, seem to be optimistic regarding future business. Several small shops have made assignments in the past year while others have started up business in different places.

There have been no accidents of a serious nature to men working at these trades. Belt shifters are being recommended wherever possible as they do away with a great deal of unnecessary risk, such as throwing belts on and off with a piece of stick or wrench. Considerable progress has been made in having several new exhaust systems installed in polishing rooms and a good percentage of improvements in others.

Report of J. Pender West, Inspector and Examiner of Reports and Designs

The plans for new buildings and for additions, alterations and improvements to existing buildings, submitted for approval in accordance with the provisions of the Factory, Shop and Office Building Act, may generally be taken as a fair indication of the trend of industrial expansion or otherwise. As might be expected, therefore, the number of plans received during the past year was smaller and the value of the buildings represented by the plans was less than has been the case for some years past. New plants which have been under consideration and extensions and improvements to existing plants which in more prosperous times would have been carried out, have been held in abeyance pending more definite indications of an industrial revival. Present indications appear more favourable for an increased amount of industrial building during the coming year and it is to be hoped that this prospect will materialize.

The plans submitted during the year were 20 per cent. less in number and 58 per cent. less in value than during the preceding year. Of the plans 64.7 per cent. of the value of the buildings was for factories (48.2 per cent. for new buildings and 16.5 per cent. for alterations and additions) and 35.3 per cent. for shops and office buildings (27.9 per cent. for new buildings and 7.4 per cent. for alterations and additions).

The general improvement in the planning of industrial buildings which has been noted in previous reports, with reference to provisions for safety and health of employees, has been well maintained, especially with those firms who have proved by experience that good light, thorough ventilation, proper sanitary arrangements and careful consideration of the employee's health are powerful factors in securing efficient production. A number of architects and owners have adopted the practice of having a preliminary conference with this department when the question of building is under consideration, either before the plans have been commenced or whilst they are in the preliminary stages. Much unnecessary time, trouble and expense is saved by this practice and the Department is always willing and glad to co-operate in this manner and to furnish any available information or advice. On the other hand, in some cases buildings have been commenced and even completed before the plans have been submitted. This is a distinct violation of the law and has produced unpleasant results. In addition to the liability to prosecution at law, necessary alterations have had to be made to the buildings at considerable trouble and expense to the owner, which would otherwise have been avoided.

The subject of the best arrangement and location of sanitary conveniences is too often treated as of minor importance. Apart from the effect upon the health of the employees of ill-considered planning of these conveniences, the direct financial loss to the employers through waste of employee's time may become a serious item. In one case, a set of plans submitted for a large plant showed an arrangement which necessitated some of the employees traversing a distance of some 700 feet in going to and returning from their toilets, and as the route passed through other departments, with the inevitable temptation to loiter on the way, a simple calculation would show that the value of the time thus wasted would very soon amount to more than the cost of additional accommodation. This was an extreme case, but similar conditions are surprisingly frequent. In the same way, a liberal and well distributed supply of drinking fountains will also pay for itself in a very short time, but it is seldom that this matter receives serious attention. The importance of arranging the approaches

to women's toilets so that they can be used without embarrassment has been previously emphasized, but the plans which are received show that the necessity for this is often not appreciated.

The value of good lighting is becoming more and more widely appreciated, especially by owners of large plants, some of whom are reverting to the older European type of one-storied buildings, with top light distributed over the whole building. This is only practicable where large sites are available and as the costs of building and of heating the building are greater, the advantages are evidently considered to be of sufficient value to offset these disadvantages. In many of the modern buildings where ample glass is provided for lighting, no provision is made for cleaning this glass. This criticism applies especially to the "daylight" type of building, where practically all the outside wall surface is occupied by steel sash. As the greater part of the glass is usually out of ordinary reach, accumulating dirt soon reduces the light by as much as half or more, and the building assumes an increasingly dingy appearance. There are several well tried methods of arranging for the cleaning of these windows and the advisability of installing a proper system when the building is erected should always be considered.

The question of a proper distribution of artificial light is also often given quite inadequate attention. Too often it is considered that if a sufficient number of sufficiently powerful lamps are installed the problem is solved. The fact is overlooked that the light may not be properly directed (i.e. upon the work being done) and still more often, that it comes from the wrong direction, causing shadows in places which should be fully illuminated. The undesirability of lights shining directly upon the eyes of the worker, reducing his efficiency and impairing his eyesight, has been so often enlarged upon that it should be unnecessary to repeat the warning, but this defect is still seen in many installations. A recent article in a trade journal cited the case of a large plant where the owners, under the best available expert advice, entirely remodelled their lighting system, with the immediate result that production was increased 17 per cent. Reduction of accident frequency is another result of proper lighting, especially machinery accidents at the point of operation and "tripping" accidents.

DISTRICT INSPECTORS

R. Albrough, *25 Grosvenor Avenue, Sault Ste. Marie.*—Mr. Albrough's district is west to the Manitoba boundary line; east, including Manitoulin Island, Sudbury and North Bay, to Quebec boundary line.

G. H. Bostock, *185 Glebeholme Boulevard, Toronto.*—Mr. Bostock's district is old C.P.R. lines east to Sharbot Lake; G.T.R. lines north, including Peterborough, but excluding North Bay; south to G.T.R., C.N.R., C.P.R. lines.

H. Bourne, *111 Milverton Boulevard, Toronto.*—Mr. Bourne covers all districts in the Province of Ontario for the purpose of investigating foundries.

W. T. E. Brennagh, *59 Kensington Avenue South, Hamilton.*—Mr. Brennagh's district is G.T.R. main line west to London (exclusive); east to Niagara Falls; south and east of London and Port Stanley lines; north, C.P.R. and G.T.R. to Crumlin and Tavistock, but exclusive of Milton, Branchton and Ingersoll Junction.

H. A. Clark, *238 Dufferin Street, Toronto.*—Mr. Clark's district is city of Toronto, east side of Yonge Street and west of Don river; north, including Leaside and Metropolitan line, but excluding Aurora and Newmarket; south, including a portion of Toronto Island.

W. S. Forster, *336 McLeod Street, Ottawa.*—Mr. Forster's district is east of North Bay, Algonquin Park and K. & P. Railway.

A. W. Holmes, *39 Lakeview Avenue, Toronto.*—Mr. Holme's district is city of Toronto, east and south of Lansdowne Avenue and Bloor Street west to Burlington; north to city limits; east, including York Street, University Avenue and Avenue Road; south, including a portion of Toronto Island.

R. Hungerford, *382 Durie Street, Toronto.*—Mr. Hungerford's district is city of Toronto west of but including Lansdowne Avenue and Bloor Street, also West Toronto, Lambton, Milton, Branchton but excluding Drumbo, Stratford, Gowanstown and Fordwich; north to Southampton, Bruce peninsula, Owen Sound, Collingwood, Meaford, Penetanguishene, and both C.P.R. and C.N.R. lines, including Orillia and Elmvale, but excluding Sudbury.

S. J. Mallion, *74 St. Vincent Street, Stratford.*—Mr. Mallion's district is Fordwich, Gowanstown, Stratford, St. Mary's, London, St. Thomas and Port Stanley; south and west to border line, including Ingersoll Junction on the C.P.R., and north including Teeswater, Kincardine and Goderich.

Miss Hamilton, *200 Princess Street, Kingston.*—Miss Hamilton's district is Kingston, K. & P. Railway, north and east to the Quebec boundary line.

Miss Ogilvie, *118 Centre Avenue, St. Thomas.*—Miss Ogilvie's district is Port Dover, Simcoe, Woodstock, Tavistock, Listowel, Teeswater, west, south and north to Lakes Huron, Erie and River St. Clair.

Mrs. A. N. Reddick, *437 Crawford Street, Toronto.*—Mrs. Reddick's district is east side of Yonge Street, north and south of K. & P. Railway excluding Kingston, Renfrew and Pembroke; north and west, including North Bay, Parry Sound, Mount Forest, Durham, Orangeville, Elora, Fergus, Downsview, and above northern city limits.

Mrs. G. E. Hornell, *Mimico P.O.*—Mrs. Hornell's district is south of G.T.R. and C.P.R. main lines to waterfront and east, including Bathurst Street and west; south of C.P.R. to Cooksville and G.T.R. main line, including Hamilton, Dundas, Caledonia, Waterdown, Cayuga, Jarvis and Niagara peninsula.

Mrs. Eleanor Gurnett, *102 Kingswood Road, Toronto.*—Mrs. Gurnett's district is west side of Yonge Street north to city limits; south to G.T.R. and C.P.R. main lines; west, inclusive of Elmira, but exclusive of Stratford, Woodstock, Simcoe and Port Dover; and south, excluding Jarvis, Cayuga, Waterdown, and Dundas; north exclusive of Bolton, Elora, Orangeville, Mount Forest and Owen Sound.

Hugh Stevenson, *22 Hambly Avenue, Toronto.*—Mr. Stevenson's district is city of Toronto, east side of Don river, north and south to city limits; east G.T.R. and C.P.R. to Kingston, inclusive.

H. J. Tutt, *39 Atlas Avenue, Toronto.*—Mr. Tutt's district is city of Toronto, west side of Yonge Street to York Street, but excluding York Street, University Avenue and Avenue Road, to northerly limits; south including portion of Toronto Island.

A. J. Wright, *175 Galley Avenue, Toronto.*—Mr. Wright's district covers all districts in the Province of Ontario for the purpose of investigating polishing plants, etc.

STRIKES AND LOCKOUTS DURING 1924

Strikes Commenced Prior to November, 1923

Locality	Occupation	Commenced	Particulars	Number of employees involved	Time loss in working days
Hamilton	Printing compositors	June 14, 1921	Objection of men to perform work that came from shop where strike existed. Information received in April indicated employment conditions no longer affected.	10	1,270
Toronto	Printing compositors	June 1, 1921	For increased wages and 44-hour week. Called off by Union, August 30.	276	56,654
Ottawa	Printing compositors and pressmen	June 1, 1921	For increased wages and 44-hour week. Called off by Union, August 30.	28	5,124
Niagara Falls	Motormen and conductors	July 2, 1922	For recognition of Union. Information received in April indicated employment conditions no longer affected.	7	739
Totals	.....	.....	.....	321	63,787

Strikes Commenced During Fiscal Year

Ottawa	Stonecutters	November 7	For increased wages. After negotiations work was resumed November 10, on employees' terms.	8	24
Sarnia	Moulders	March 5	For increased wages. Settled by negotiations and work resumed March 14; compromise.	9	63
Meaford	Telephone operators	March 1	Against enforcing new rules. Settled March 5 by replacement of strikers; in favour of employers.	6	18
Guelph	Bricklayers and masons	April 1	For increased wages. Settled by negotiations and work resumed April 12; compromise.	11	121
Toronto	Stonecutters	May 6	For increased wages. Work resumed May 19 on employers' terms.	60	600
Hamilton	Bricklayers	May 1	For increased wages. Settled by negotiations and work resumed May 6; compromise.	100	350
Windsor	Plasterers	May 1	For increased wages and shorter hours. Work resumed May 15 on employers' terms.	12	144

STRIKES COMMENCED DURING FISCAL YEAR—*Continued*

Locality	Occupation	Commenced	Particulars	Number of employees involved	Time loss in working days
Guelph	Moulders	June 2	Against reduction in wages. Unterminated.	17	1,410
Ottawa	Bricklayers	June 12	For increased wages. Settled by negotiations and work resumed June 17, on emers' terms.	10	35
Hamilton	Plumbers and steamfitters	June 19	For increased wages. Settled by negotiations; work resumed July 26; in favour of employees.	66	2,112
Kitchener	Plumbers and steamfitters	June 19	For increased wages. Settled by negotiations June 30; compromise.	28	364
Toronto, Windsor, and other cities	Postal employees	June 18	For increased wages. Men resumed work June 30 on employer's terms.	3,200	25,000
Hamilton	Moving picture projectionists	During July	Alleged lockout of union employees. Information received during October indicated that employment conditions were no longer affected.	6	306
Ottawa	Theatre musicians	August 2	For wage increase. TerminatedAugust 23 in favour of employers.	12	130
Various cities	Telegraphers	Sept. 11	Against a proposed reduction in wages when the employees had demanded an increase in wages. Work was resumed September 22, pending a final settlement before a Board of Conciliation and Investigation. Indefinite.	77	732
Total strikes commenced during fiscal year				3,622	31,409
Total strikes commenced prior to fiscal year				321	63,787

REPORT

OF THE

Minister of Education

FOR THE YEAR 1924

To His Honour Henry Cockshutt, Esq.,

Lieutenant-Governor of the Province of Ontario.

May It Please Your Honour:

In submitting the annual report of the Department of Education for 1924 I have the satisfaction of recording that at no previous period has the school system as a whole been in a more prosperous and satisfactory condition. The general interest of our people in education was never more marked than it is to-day. The financial support of the schools is on a generous and, to some extent, on a lavish scale. The attendance is larger than ever before. The substitution of more highly trained teachers for those possessing certificates of lower grade goes steadily forward. The teaching profession continues to attract the right kind of material, and there is a surplus of teachers from which trustees may make selection. Salaries also continue high and, comparing the scale now in force with that which existed years ago, it may fairly be contended that the avocation of a teacher, which has long lagged behind the other professions in point of emolument and permanent attraction, is now coming into its own. The statistics which accompany this report fully support the foregoing observations, and if we content ourselves with examining the problems of education from the statistical standpoint alone, the people of Ontario must be considered fortunate in the possession of a school system which presents so many evidences of vitality and efficiency. But I am not satisfied that arguments drawn solely from statistical information, valuable and convincing as that basis is, can be held to answer conclusively all the questions that arise when popular education is dealt with—questions of the adaptability of courses of study to the training and to the after occupations of young people, questions of administration and control which mean so much in the practical working of the system, questions of financial importance, such as the securing of value for the money spent, and the costs of education as they bear upon the ability of the people to pay. These reforms embody the need for constant effort and careful thought, since no system can afford to stand still and live upon the triumphs of the past.

It has been my chief aim, therefore, during the past two years, to devise plans to meet new conditions which have arisen through the changing circum-

stances that confront the Province, some of them reflecting certain economic factors that affect us as never before, others pointing to the necessity of providing advanced instruction and more thorough training of various kinds so as to fit our young people for the battle of life. Attention has accordingly been drawn, on more than one occasion, to the advisability of bringing closer to the homes of the pupils the advantages of university courses of study in the earlier stages at least. To set forth in detail the reasons for this reform is not needed in this place. Time, and perhaps convenience, produced in both elementary and secondary education a tendency to curtail the programmes of each and ultimately to assign to the universities work which might have been done in the schools. The elementary schools, especially in urban centres, passed on fifth form work to the secondary schools, and the latter sent forward pupils to the universities which, in turn, provided courses that could have been developed in the high schools. Purely natural causes brought about the present conditions. It is not sought to place responsibility for the change on either the institutions concerned or on the leaders of education. But the time has arrived, in my judgment, when an effort should be made by co-operation between the Department and local centres able to equip themselves for the task, to transfer gradually to high schools some of the facilities for advanced education now thrown wholly upon the universities, with some embarrassment to them on the ground of cost and with some disadvantages to pupils who should be encouraged to continue advanced studies nearer home and to enter university life, when it appears advisable they should do so, at the stage of greater maturity. The announcements already made have been misunderstood. It is not the intention to institute this departure in 1925, nor is it designed to transfer first and second year work to the schools at first. The intention is to begin the new policy with the first year course at local centres, and, if possible, to institute it in September, 1926. A provision covering a full two years' university work presents a problem of considerable difficulty and cannot be determined quickly. The whole situation has to be weighed in the light of university rights set up under the federation agreement between the provinces and certain institutions of college and university standing, and this phase of the problem will be given the most careful consideration.

Another question to which I invite the attention of all who are interested in education is that of transferring the administration of rural schools to township boards. A Bill to this effect was introduced at the recent session of the Legislature and withdrawn after the first reading. The intention was to submit this Bill to the ratepayers generally throughout the Province, in order that they might furnish the Department with their views on the subject, either in the shape of amendments of the proposed scheme, or some better plan. Copies of this Bill will be sent freely throughout the Province, accompanied by a memorandum setting forth the causes which have produced the proposed measure. The plan of township boards is not new in Ontario. The school law contained provisions, for many years, which gave localities the option of establishing them, but there has been little or no response to the invitation. My purpose in reviving it now is, in considerable measure, due to the serious problem of costs, which are heavier than the ratepayers in many localities are able to bear and which cannot be reduced without impairing the efficiency of the schools unless resort is had to a larger unit of administration and the consequent elimination of certain unnecessary expenditures. Present conditions entail at least three disadvantages: first, many schools have too small an attendance to justify their maintenance; second, taxation for school purposes in any township is not fairly distributed

among the ratepayers; and third, the opportunities for high school education are inadequate and unfairly distributed. The maintenance of schools with a low attendance may be set down as follows:

Number of Schools	Average Attendance
177	5 pupils or less
891	10 " "
1,794	14 " "
2,902	19 " "
2,081	20 " or more

In those schools where the attendance is five or less, the cost of education per pupil is $248.33, of which the Legislature contributes $99.91. There is also another uneconomical factor in the building of schools at high costs where the attendance is too small to justify such a policy. The want of proper facilities for higher training, which is one of the strongest grounds for a change of policy, rests more heavily upon the rural areas than the urban centres. In the urban centres, the existence of one school board has helped to give the urban schools their superior efficiency. But the country child is as much entitled to the best educational facilities as the town child. As it is difficult to secure co-operation for this purpose among rural sections, a township board is suggested as a remedy. I regard it as of great importance to this Province that a high school education should be within the reach of every pupil. The measure which will be shortly distributed throughout the Province, while only tentative, indicates the fact that it is possible to constitute a central board without destroying the representation of school sections or leaving them without representation. The problem here outlined is the problem of the ratepayers themselves. No desire exists to force upon the Province a change in its educational structure which has not popular support, but I desire to point out that the present situation is too serious to be permanent and that some method of dealing with it must be found.

A narrative of the facts will be found in the report of the Director of Rural School Organization. The financial burden of maintaining the present system is outlined in that report. To illustrate the situation the case of the 177 one-roomed schools with an attendance of five pupils or less may be taken. There are 708 pupils in them. To educate each pupil it costs nearly $250 annually. While the legislative grant is on a generous scale, the chief burden is upon the ratepayers of the sections. It is really their problem. Complaints of the cost of education lose much of their effect when the Province is aware that the remedy for at least a large part of the expenditure is in the hands of the people themselves. It should also be noted that a school with a very small attendance is not an efficient school and the handful of children who attend cannot get out of school life, even under a good teacher, all that they are entitled to receive.

The Elementary Schools

During the year a memorandum on the new course of study was issued, with a view to ensuring sympathetic treatment by inspectors and teachers of the changes involved in it. Emphasis was placed upon the aims to be sought in language teaching, in arithmetic, and other subjects, and to discourage as far as possible the prescription of home work, which in the case of pupils below form III should not be required at all. The substitution of supervised work in the class

for exercises required to be done at home was urged upon the schools, so that the influence and personality of the teacher might find their true place in the training of the child. While the new course of study is subject to modification, should experience show this to be advisable, there is good ground for hoping that it meets some of the complaints that have been made in recent years, and such information as has reached the Department is favourable to its continuance. My intention is to follow this matter closely so that any defects that may still exist may be remedied and the schools given fresh inspiration to do the best work.

The death of Dr. John Waugh, for a number of years Chief Inspector of Public and Separate Schools, was much lamented by his associates and by the public generally. Dr. Waugh was not merely an educationist of experience as teacher and inspector, but also possessed scholarly tastes and qualifications which made him a valuable member of the Departmental staff. He had graduated from the provincial university as a first class honour man in classics after a successful course which included also English, mathematics and science, and his degree in pedagogy was the result of a firm grasp of the science of education. His talents would have gained him a high place in literature or in public life, but like so many other teachers, he devoted his time and energy to his professional duties. His successor, Mr. V. K. Greer, Chief Inspector of Public Schools for the City of London, has had long experience which well fits him for the duties of the office.

The reports of school conditions in Northern and North-Western Ontario are favourable. The devotion of the residents in the districts to the educational welfare of their children is most creditable to them. The difficulties of small isolated settlements continue, but the Department is doing all that is possible to counteract the influence of adverse conditions. Qualified teachers are employed in the vast majority of schools and the number of temporary certificates has much diminished. The formation of new schools, the erection of new buildings, and the increase in the number of teachers engaged are signs of the general expansion.

By arrangement with the Department of Health, joint regulations have been agreed upon by both Departments for the medical inspection of schools throughout the Province. The transfer of this service to the Medical Health Department should result in saving a duplication of expense and of effort in this important branch of work. Under the new regulations the rights of school boards in the initiation and carrying on of medical inspection of pupils are preserved.

The enormous investment of money in the elementary schools of the Province, and the annual cost of maintaining them, are the surest indication of the estimate placed by the people generally upon popular education. The value of school sites, buildings and equipment is set down at $85,467,626 for 1923, a valuation greater by nearly $8,000,000 than that of the previous year. The annual expenditure for 1923 was $35,858,355.

Secondary Education

The demand for instruction beyond elementary courses continues to grow with each succeeding year. There are several reasons for this, but probably the governing factor is the general sentiment of the community that success in life calls for more educational preparation and that an elementary training is not in itself sufficient to equip a boy or girl for any calling or career. It is true that education does not close with school courses, but should go on through the

succeeding years. But systematic study when one's occupation has begun is subject to many interruptions, and the prudent policy is to secure education when it is most readily available. The pressure for more accommodation is, therefore, a grave problem with many municipalities, and great sacrifices are being made to meet it. Some of the more notable building programmes are recorded in the reports of the high school inspectors, and are evidence of the courage with which the heavy expenditures entailed are being undertaken. The number of high schools and collegiate institutes during 1923-24 was 183, with an enrolled attendance of 48,263, or an increase of over 8 per cent. The expenditure of these schools for maintenance was $4,989,243. Of this sum, over 67 per cent. is for teachers' salaries. The total value of sites, buildings, furniture and equipment now amounts to $16,122,086.

The continuation schools have not suffered by the increased attendance in the high schools. There are 199 of these schools, and considerably more than half the pupils are the sons and daughters of farmers.

Technical Education

The provision made for technical and vocational training during the year has been remarkable. The erection of new buildings for the carrying on of this instruction is reported from a number of centres, and the attendance figures exhibit a steady and satisfactory growth. There are now: 9,184 full-time day pupils; 1,837 part-time day pupils; and special day pupils, 1,798—a total of 12,819 day pupils. The evening classes are attended by 36,452 pupils. These figures all show increases over the previous year. In the larger centres, and even in some of the smaller places, the evening classes are doing excellent work, dependent in part upon the enthusiasm of the teachers and also because the value of the instruction given is generally recognized. The importance of the teacher in industrial and technical schools has resulted in the establishment this year (1925) of the Ontario Training College for Technical Teachers. It was hoped at one time that a central college for the whole of Canada to maintain this class of professional training could have been set up. Pending decision as to this, Ontario provided for the need by maintaining summer courses. Now that the project originally planned has had to be abandoned, I have arranged for an adequate and comprehensive scheme which shall be permanent. The necessary site has been secured in Hamilton adjacent to the Hamilton Technical Institute, the classes in which will be used for observation and practice teaching. The course laid down will be found in detail in the appended report of the Director of Technical Education, and it is gratifying to observe that the first session of the new college has opened with a good attendance of qualified candidates. The gradual formation of apprenticeship classes in larger centres by co-operation between employers and men will be noted with great interest. In Hamilton, this method of linking the technical school courses with industry has had good results. The attendance last year was 128, the apprentices coming from manufacturing and printing establishments and from bricklaying and carpentry industries. A similar condition, also marked by success, prevails in connection with the Central Technical School, Toronto, and the results cannot be but of vast benefit in producing efficient craftsmen for all the principal industries of the Province.

The Supply of Teachers

The supply of teachers for both elementary and secondary schools in Ontario at present shows a surplus, and some teachers, recently from the training schools, have had difficulty in securing schools. This applies chiefly to young teachers but there is still a demand for experienced and well qualified teachers. Those who possess the higher grade of certificates—first and second class—have the first claim upon school boards, and the salaries paid warrant the hope that in due time all elementary classes will be conducted by normal trained teachers. There are now in the elementary schools 1,335 teachers with first-class certificates, and 11,365 with second-class certificates. The number of those teaching on third-class certificates has dropped to 1,066, which reveals the difference between the conditions of to-day and those of fifteen years ago. The Provincial Normal School attendance this year is 2,452, and the number of male candidates for certificates is 404. While too large a surplus of teachers is not to be desired—the record attendance at the training schools being primarily due to economic causes—it is well that the present period of expansion in school facilities should be coincident with an adequate supply of trained instructors. The average salaries of teachers had not decreased down to the year 1923, the last period for which full statistics on this point are available. The average for 1923 in elementary schools was $1,661 for men and $1,133 for women teachers. Those possessing certificates of higher grade received the best salaries, namely, $2,311 for men and $1,237 for women. There are, as yet, no indications of a revolution in the recompense of teachers as a result of a surplus supply.

Agricultural Instruction

The movement to include agriculture in the school curriculum makes a steady advance. Where the teacher is qualified to give this instruction no difficulty is experienced in securing a place for it in the curriculum, and in some inspectorates practically all the schools have instruction in agriculture. The desire is not confined to rural schools, for in a considerable number of urban centres, particularly in secondary schools, a course in agriculture has been established. A stimulus to the movement is given by the agricultural representatives of the Department of Agriculture, who unite with the inspectors in rousing the interest of pupils by conducting school fairs. It is my aim to develop the co-operation of this Department with the Department of Agriculture in every practicable way, so that a knowledge of agriculture shall be considered an indispensable part of every rural pupil's education, and that in the urban centres the young people may be able to obtain at least a proper grasp of the subject which is so closely related to the prosperity of the Province and to our commanding position in the Dominion.

Education of Deaf and Blind Pupils

The Ontario School for the Deaf at Belleville, and the School for the Blind at Brantford, are in a satisfactory condition. The work carried on in these schools is based upon the most modern methods of dealing with pupils who are physically handicapped either by the loss of sight or hearing. The teachers are specially selected for their ability to handle classes of this kind, and are, for the most part, drawn from those who hold provincial certificates from the Normal Schools. In addition, at Belleville, where the system of oral training prevails,

as it does in all the most efficient schools of this class everywhere, the teachers are trained in the special methods of teaching the deaf. For this purpose, in order to provide a supply of teachers drawn from the Province, a training course for new teachers, inexperienced in this work, has been established covering a period of three years. The literary examiner of the school, who is the local public school inspector, points out the absolute necessity of avoiding changes in the teaching staff of a school of this nature, and the plan now in vogue will, it is hoped, reduce this danger to a minimum. Until the establishing of this training course at Belleville, the necessary instruction was obtained usually in the United States. At Brantford, the literary examiner (the local public school inspector) speaks favourably of the progress made by the pupils and also of the courses of study, which are adapted to meet the requirements of the pupils. In music, a thorough training is given, and the report of the chief examiner, Dr. Albert Ham, of Toronto, is very satisfactory.

Respectfully submitted,

G. H. Ferguson,

Minister of Education.

Toronto, April 21st, 1925.

APPENDIX A

REPORT OF THE CHIEF INSPECTOR OF PUBLIC AND SEPARATE SCHOOLS

To The Honourable G. Howard Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—I have the honour to submit herewith the Annual Report of the Chief Inspector of Public and Separate Schools for the year 1924.

I have the honour to be,

Sir,

Your obedient servant,

W. I. Chisholm,
Assistant Chief Inspector.

Toronto, February 26th, 1925.

In Memoriam

The educational services of the Province suffered a severe loss by the death, on November 5th, 1924, of Dr. John Waugh, Chief Inspector of Public and Separate Schools.

Dr. Waugh was born in Scotland and came to Canada with his parents at an early age. After graduating with honours from the University of Toronto, he taught for some years in the High Schools at Barrie, Orillia, Collingwood and Whitby. He became Inspector of Public Schools in Ontario County in 1900, Departmental Master at the Ottawa Normal School in 1910, and Inspector of Continuation Schools in 1911. He was appointed Chief Inspector of Public and Separate Schools in 1913 and held this position with great acceptance until his death.

His varied experience gave him an unusually broad grasp of the conditions and requirements of the Public and Separate Schools of Ontario. Not only had he an intimate personal knowledge of educational conditions throughout the Province, but his fine enthusiasm and ideals, his kindly disposition, his sound judgment and his sociable nature enabled him to win and to hold to an unusual degree the esteem and confidence of those with whom he laboured. These qualities of mind and heart were the secret of his success in adjusting difficult situations, and many a local community has reason to remember with satisfaction his tactful handling of difficulties that threatened to disrupt local peace and harmony.

At the funeral service at Bloor Street Presbyterian Church, the Hon. Dr. Cody, former Minister of Education, paid him the following high tribute:

"Dr. Waugh was a real educational leader and a self-sacrificing public servant. He was the embodiment of a great educational ideal—a man who

devoted his life to stimulating educational effort, who had great sympathy for individual workers in education and who directed his energies to the moulding of a better citizenship."

The vacancy caused by his death has been filled by the appointment of Mr. V. K. Greer, M.A., Senior Inspector of the Public Schools of London, Ontario.

Major W. J. Hamilton, B.A., Inspector of Public Schools for Fort William and parts of Thunder Bay and Kenora Districts, died suddenly on May 13th, 1924, while in the active discharge of his duties. Major Hamilton was an efficient Inspector, tactful, helpful, courteous and a most indefatigable worker and, as a citizen, identified himself actively and patriotically with every movement tending to the good of the community.

Early in the history of the Great War, he recruited "B" Company of the 94th Battalion and went overseas as third in command. In England he joined the Imperial Forces and served as an Instructor in training camps. He was later appointed an Area Commandant in the war zone in Belgium and for his services there was rewarded by the Belgian Government with the Belgian Croix de Guerre. The French Government also honoured him with the Medaille Agricola for his reconstruction work in the devastated area of France. On his return from the front in 1918 he resumed his former duties as Inspector.

Changes in Inspectorates

The county of Essex has been divided into two inspectorates. Dr. Maxwell, who has had charge of the greater part of the county for many years, retains the following municipalities—Mersea, North and South Gosfield, South Colchester and Pelee Island, and the towns of Leamington, Kingsville and Essex. Mr. Thomas Preston, B.A., was appointed, in July, 1924, Public School Inspector of the remainder of the county with the exception of the town of Sandwich, and including the schools formerly inspected by Inspector V. C. Quarry. This arrangement gives each Inspector approximately 100 teachers.

The Chatham city schools are under the charge of Inspector J. H. Smith, of West Kent. This arrangement gives Mr. Smith too large a number of teachers for effective supervision. In September a small number of rural schools was transferred to Inspector Colles, of East Kent. A further readjustment is necessary as the county, exclusive of the Chatham city schools, has 210 teachers, a number quite sufficient for the two County Inspectors.

A readjustment has taken effect in the county of Welland. Inspector Hetherington has been withdrawn from Niagara Falls city and retains the city of St. Catharines. Niagara Falls city schools are now in charge of Inspector J. W. Marshall. Welland City formed a joint-inspectorate with the county until December, 1924, when the agreement with the county was terminated and the Board appointed Mr. John Flower, B.A., Inspector of the city schools.

After nine years of faithful service as Public School Inspector of Centre Hastings, Mr. J. E. Minns, B.A., resigned to assume the principalship of the Vankleek Hill Collegiate Institute. Mr. A. W. McGuire, B.A., of Ottawa, was appointed his successor.

The growth of population in urban centres and extension of settlement necessitated a redistribution of territory in district inspectorates of Northern Ontario. A new joint city inspectorate comprising the cities of Port Arthur and Fort William was formed, to which W. A. Wilson, B.A., of Haileybury,

was transferred, his place in Timiskaming being taken by Donald G. Smith, B.A. The rural area adjoining the above-named cities was consolidated into a rural inspectorate, under Inspector Ritchie. The District of Rainy River and Central Timiskaming were detached from surrounding territory and formed into two new inspectorates, to which Inspectors will presently be appointed. The Sudbury area was divided and part of it was organized with Central Algoma District into a separate inspectorate, of which Robert Gillies, B.A., was given charge. All other district inspectorates were reconstituted to correspond with the above changes, thus, on the whole, relieving Inspectors of excess of work and adding greatly to facility and efficiency of administration.

The increase in the number of Separate Schools established during recent years made necessary the reorganization of the whole system of Separate School inspectorates with a view to the reduction of the number of teachers assigned to each Inspector. An additional Inspector, Mr. H. J. Payette, B.A., was appointed in July, 1924. There are now nine Inspectors engaged in this work, four in Toronto and Western Ontario, three in Eastern Ontario and two in Northern Ontario.

Inspectoral Changes in Prospect

The inspectoral situation in Lambton county and Sarnia city is even more serious than in the case of Kent county and Chatham city. There are 218 teachers in the schools of Lambton county alone, not including the Sarnia teachers, quite enough for effective supervision by the two County Inspectors.

In the county of York, not only have the Inspectors too large a number of teachers under their charge, but local conditions, particularly in the Toronto suburban areas, require from them a large amount of administrative and organization work. A fifth Inspector should be appointed in the near future.

The inspectoral situation in the counties of Simcoe, Waterloo and Wentworth and Halton (joint), should in the interests of efficiency be relieved by the appointment of an additional Inspector in each of these counties.

The following Inspectors also have charge of an unduly large number of teachers and should be given relief: J. E. Tom, of West Huron; Dr. J. M. Field, of East Huron; G. A. Carefoot, of Lincoln; P. J. Thompson, of East Middlesex; and W. J. Galbraith, of Peel.

It is a curious fact that twenty-three out of the twenty-eight County Inspectors (or 82 per cent.) east of Toronto have fewer than 110 teachers, while only twelve out of the forty-two County Inspectors west of Toronto (or 28 per cent.) have fewer than 110 teachers.

School Grants

The grants to rural and urban schools were apportioned in 1924 on the same bases as in previous years. These liberal grants have encouraged trustees to pay adequate salaries and thus secure and retain well qualified teachers. Notwithstanding the large number of qualified teachers available, resulting from the unusually large classes graduating from the Normal Schools in July, 1924, there has been as yet little tendency toward the reduction of salaries.

Special grants, amounting to about $100,000 were paid during the year from the Assisted Schools Fund to various Public and Separate Schools in the newer and poorer parts of the Province to assist in building and maintaining schools. This fund is especially designed to assist schools where the assessment is below $40,000 and appropriations from it are made according to a carefully graded

scheme which takes into consideration the educational needs and the ability to pay of each of the sections applying for assistance. By this scheme of apportionment a check is also placed on the tendency of some trustee boards to build a more expensive type of school than conditions warrant.

The Revised Courses of Study

The Courses of Study of the Public and Separate Schools were revised and issued in September in a tentative form for the school year 1924-1925. In response to a widespread belief that the former Courses of Study were too burdensome, a serious attempt has been made to lighten them and to give them greater elasticity. In some subjects the work to be covered has been considerably reduced by the omission of topics formerly included. In other subjects, many details that have little relation to the pupils' life have been eliminated. Greater freedom has been provided in some subjects by the prescription of a brief minimum course to be taken in all schools and a broader supplementary course from which selections may be made to suit the conditions of individual schools.

Those charged with the presentation of these courses in the schools have been asked to make careful tests as to their suitability for the pupils for whom they are intended. In this connection the following extracts from the 1924 Annual Reports of the Inspectors are of interest:

"We have had the new Course of Study now for four months and everyone seems satisfied with it. Certainly it is a great improvement on the old one. There was great need for more attention to the English Language and Literature. Stress is being placed where it should be. The Course is made much more compact and practical."

"The new Course of Study for Public and Separate Schools is much the best we have ever had."

"I am of the opinion that on the whole the changes made are in the right direction, and that they have in some measure eased the burden for both teacher and pupil, which I had long felt was too heavy. Possibly the burden might be still further lightened with advantage to all concerned. While I feel that at least a few slight modifications are desirable, I wish to express my belief that, on the whole, the Course has been made more satisfactory and the demands on the teacher more reasonable."

Special Problems

The special problem of providing adequate school accommodation in suburban districts without placing an undue financial burden on the ratepayers concerned is becoming more acute. The relief measure provided by the Amendments to the Schools Act of 1921 and 1922, which permits the Council of a Township to set apart a portion of a township contiguous to a town or city as a township school area, in which the separate sections would be done away with and the schools placed under a board of five trustees, has not yet been put into operation, although it would seem to offer a simple and satisfactory solution of the problem.

The problem of the large number of rural schools with a small attendance and a resulting high average cost per pupil is still pressing. The solutions offered in the plan of Consolidated Schools or in transportation to neighbouring sections do not seem as yet to have met with general favour. A larger unit of administration such as a township or a county unit might prepare the way for an adequate solution of this problem, if the people were prepared to adopt it.

This would also remove some of the inequalities in school rates. One Inspector reports that the rates for rural school purposes in his Inspectorate vary from six mills to forty-one mills.

Northern Ontario

Dr. J. B. MacDougall reports: "The number of teachers holding First or Second Class certificates has increased to such an extent that there is now little demand for teachers holding lower certificates.

"Inspectors report that even the frontier schools are sought by the higher grade of teachers. The improvement in standard is clearly in evidence from the following schedule showing the percentage of public school teachers of various grades in the district rural schools:

Certificates	I and II	III and District	Temporary
1921	37%	43%	20%
1922	43%	47%	10%
1923	52%	43%	5%
1924	68%	31%	1%

Temporary certificates are practically eliminated, there being none in all but four of the sixteen District Inspectorates.

"It is a gratifying fact that, notwithstanding the general downward revision of salaries in commercial callings, there is an appreciable increase in those of district rural schools over 1923. The average is almost $1,000, which is an advance of $15.26 over the preceding year.

"The growth of Northern Ontario is fully reflected in school statistics. There is an increase in 1924 of thirty-one teachers in rural and twenty-two in urban schools. Sixteen new rural sections were formed and thirty-eight new schools erected at a cost of over $380,000. The urban total brings the amount to almost half a million for 1924. The total outlay for new buildings has been $2,398,762 for the past four years."

School Buildings

Mr. George White, Consulting Architect to the Department of Education, reports as follows:

"The new public and separate schools at Haileybury and the new Consolidated school at Charlton have been completed, and a new school built at No. 3, Hilliard, thus completing the rebuilding of the schools destroyed in Northern Ontario in the fire of 1922.

"The consolidated schools at Sundridge and Byng Inlet, and the public school at No. 3, Clergue, have been built from plans prepared by this Department.

"The following school buildings have been examined, surveyed and reported upon, and sketch plans prepared for alterations and improvements to accommodations—Arkona, Blackstock, Capreol, Glencoe, Lucknow, Port Hope, Strathroy, Scotland and Jarvis.

"The following plans for new schools and alterations to existing schools have been submitted for examination and reported upon—Milverton, Port Burwell, Schreiber, Richmond, Englehart, Gore Bay, Hensall, Thamesville, Linden, Port Carling, Thorndale, MacTier, Kirkfield, Lambeth, Riverside, St. Thomas, No. 12 Scarborough, Schumacher, Beaverton, Caledonia and Port Hope.

"The following school boards have been supplied with plans for new buildings—Sparta, No. 8 Bruce, No. 3 Barton, No. 2 Poland and Boston, Ford Separate School, No. 3 E. and W. Flamboro, Haliburton, No. 8 Kenyon, Little

Current Separate School, No. 1 Oba, No. 1 Melancthon, No. 13 Melancthon, Paudash Consolidated School, Richmond, Trenton, No. 2 Cardwell, Chelmsford, No. 4 Comber, Dalton Mills, Nakina, No. 3 Luther, Mount Brydges, Kenora, Redditt, Summertown and Shining Tree, and sketches were prepared for alterations to schools at Exeter and Holstein.

"New consolidated school buildings were examined and reported upon before payment of the final grant at Britannia Heights, Sundridge and Katrine.

"Information regarding ventilation and sanitation were given for schools at Aurora, Corbyville, No. 7 Gloucester, Lorneville, Mille Roche, No. 16 Artemesia, and Alexandria."

Mr. White's valuable assistance in the revision of the regulations with respect to school accommodations is hereby acknowledged.

The School Health Division

Dr. J. E. Phair, Chief School Medical Officer, reports:

"The activities of the School Health Division have, during the last year, been appreciably limited, owing to the decrease in the number of physicians available and to the fact that the proposed plan of initiating this service under the new regulations promised very material changes. The work done, therefore, has been confined largely to centres in which school medical inspection was already established, with the object of extending or consolidating the present programme. New rural units were formed, however, in Bruce, York, and Lincoln counties, and interest was revived in two of the suburban sections adjoining Toronto, in which school nursing had been previously carried on, but in which it had been allowed to drop for unexplained reasons. School nurses were appointed in two urban municipalities, in which no work of this kind had heretofore been carried on, and in two of the larger cities the services have been improved and an adequate programme inaugurated.

"I wish to note a continuously increasing interest among the Separate School Boards of the Province as to the advantages of school health supervision, and to report three urban centres in which the work has been recently established.

"There has also been a corresponding increase in the number of municipalities which have made provision for the care of the teeth of the children of school age, who would otherwise have gone unattended. The clinical aspect of the dental work has, however, not been permitted to overshadow the teaching end of it, and much good has resulted from the emphasis which has been placed upon the value of mouth hygiene.

"This division has also collaborated with the Inspector of Auxiliary Classes in the selection of children suitable for special instruction, and all those selected have been examined, and in those instances in which physical defects were felt to be contributing to mental disability their correction was urged. Ten municipalities were visited for this purpose.

"During the year two valued members of the medical staff, Dr. Sirrs and Dr. Curtin, resigned, and Dr. Cockburn spent five months of the year on special duty at Moose Factory, on James Bay, where from reports received she was able to do a very satisfactory piece of work. Her activities were not confined to this community, but extended to the more remote and inaccessible portions of that isolated district.

"While the decrease in the size of the nursing division has not been as pronounced as in the medical, it has been sufficient to curtail in some measure the help which it has been our custom to proffer to the rural nurses and those

urban nurses who are working alone. This is a very valuable part of the division's activities and due provision should be made for its continuance.

"At the close of the year there were some forty-five urban municipalities in which the school health service was a full-time one (employing full-time nurses) and in which it was maintained by the local Board of Education. There were also twenty rural and urban combinations, so-called units, carrying on throughout the Province. In four of the urban centres above mentioned a separate service was maintained by both public and separate school boards.

"The field staff examined during the year 7,967 children, 4,760 of whom were found to have some noticeable defect other than teeth; 1,415 were found to have defective teeth only, and the total number of children with defects, including teeth, was 6,180. In explanation of the rather high percentage of children found with defects, I would say that much of the work done during the last year has been in portions of the Province where this work has heretofore received little or no emphasis."

"In co-operation with this division of the Department, the Junior Red Cross (Mr. S. B. McCready, B.A., Organizer) continues to render valuable assistance in maintaining an interest in better health in many schools throughout the Province.

"When the Department of Education agreed in 1921 to accept the services of the Junior Red Cross in Ontario, two lines of work were outlined: (1) to co-operate with the School Health Division of the Department in the problem of making health teaching effective and attractive under the sign and inspiration of the peace-time Red Cross; (2) to provide the boys and girls in the schools with an agency in which they might join together in getting treatment for crippled children who would otherwise go untreated, in outlying parts of the Province particularly.

"The steady extension of the work during the last four years apparently indicates that it is fulfilling its purposes. During the past year 912 Junior Red Cross Auxiliaries were in operation in the schools with an enrolment of 28,121 members. The character of the work accomplished in local schools is indicated by one of the county inspectors who reports as follows: 'In those schools where the Junior Red Cross is in active operation, there are many indications of its usefulness. These are noticeable in the improved appearance of pupils; greater cleanliness in the school, the grounds, and outbuildings; greater interest on the part of the pupils in the organization and work of the school, and a feeling of responsibility on the part of the pupils in the general welfare of the school and community.'

"During the year the sum of $8,302.07 was expended through the Junior Red Cross for the relief of 562 handicapped children. Of this number 351 were children in the Haileybury fire district. In addition to these, six cripples who came under the care of the Junior Red Cross after the fire have had their treatment continued from this fund at a cost of $555.90. In all, thirty-seven handicapped children were helped through the Crippled Children's Fund, in most cases at the Hospital for Sick Children, Toronto, at a cost of $1,252.41. Of this amount, $1,090.04 was donated by Junior Red Cross Clubs in the schools. In Glengarry County 168 children benefited through the correction of nose, throat and eye defects at a country-wide clinic conducted by the Provincial Department of Health. The expenses of this clinic to the Junior Red Cross was $381.00.

"In many other ways the Junior Red Cross Clubs gave practical expression to the humanitarian part of Red Cross peace-time service, namely, 'the mitiga-

tion of suffering throughout the world.' The appeal for the 'Save the Children' Fund for Grecian refugees brought many small donations as the Japanese Children's Fund in 1923 did. At home many other local and provincial charities also were helped directly.

"Junior Red Cross offers financial assistance to any school or community, anywhere in Ontario, to secure treatment for any crippled child recommended for such by a physician. In doing this it acts for the school children of the Province. It is their little gifts that make the service possible."

General Remarks

The annual reports received from the Public and Separate School Inspectors of the Province indicate that there was a gratifying educational advancement along various lines during the past year. There was renewed activity in the building of new schools and in the improvement of existing accommodations. An unusually large number of schools made additions to the school libraries, which is a very hopeful sign. Our teachers, as a body, continue to discharge their duties with much zeal and efficiency. Official reports show that over 90 per cent. of the teachers in charge of the elementary schools now hold First or Second Class certificates. A gradual improvement is also reported in school attendance through the assistance rendered by the attendance officers appointed by school boards and municipal councils.

The valuable suggestions made in the Reports of the Inspectors will receive careful consideration. In these reports there are many appreciative references to the helpful co-operation of "The Women's Institute," "The Daughters of the Empire," "The Home and School Clubs" and various other organizations in promoting the welfare of the schools.

APPENDIX B

REPORT OF THE DIRECTOR OF TECHNICAL EDUCATION

To The Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,

I have the honour to submit herewith my annual report on Industrial and Technical Schools.

I have the honour to be,
Sir,
Your obedient servant,
F. P. Gavin,
Director of Technical Education.

Toronto, February 21st, 1925.

Enrolment and Attendance 1923–1924

The following attendance records show that the vocational schools of the province continue to show a steady and satisfactory growth.

The number of full-time day pupils enrolled was 9,184, an increase of thirty-one per cent.

The enrolment of part-time pupils was 1,837, an increase of eighty-six per cent., and of special day pupils 1,798, an increase of twenty-six per cent.

The total number of all day pupils, full-time, part-time, and special, was 12,819, an increase of thirty-six per cent.

The total number of full-time and of part-time teachers was 459, an increase of thirty-six per cent.

The number of pupils enrolled in evening classes was 36,452, an increase of seven per cent.

The number of teachers employed in evening classes was 1,193, an increase of nine per cent.

The aggregate number of student-hours made by evening class pupils was 1,413,302, a decrease of six per cent.

The total number of pupils enrolled in both day and evening classes was 49,271, an increase of fifteen per cent.

The following tables show the attendance in the vocational schools since the present system of reporting came into effect:

Day Vocational Schools

	1920–21	1921–22	1922–23	1923–24
Number of full-time teachers	191	212	286	371
Number of part-time teachers	....	60	51	88
Number of full-time pupils on roll	2,600	5,344	6,987	9,184
Average attendance of full-time pupils	2,123	4,260	5,518	7,209
Number of part-time pupils on roll	907	574	988	1,837
Aggregate student-hours of part-time pupils	40,996	37,776	60,972	177,638
Number of special pupils on roll	1,019	1,604	1,427	1,798
Aggregate student-hours of special pupils	223,570	351,214	243,074	235,082

Evening Vocational Schools

	1920–21	1921–22	1922–23	1923–24
Number of teachers	909	1,075	1,097	1,193

New Schools

The year 1923 was remarkable for the number of buildings that was erected for the purpose of providing accommodation for vocational school classes. Two factors tended to make in this year a record in building that will not soon be surpassed. On the one hand, the programme for providing school accommodation of all kinds which was delayed during the war took some time to get under way again and did not reach its greatest effort until 1923, and, on the other hand, it took local school authorities two or three years to determine to what extent and in what fields they could provide industrial and technical training. The important and substantial programmes for vocational education finally adopted were undoubtedly due in a large measure to the grants on capital expenditure available from Provincial and Dominion sources which became available in 1919.

While 1923 will stand out as a record year, the building programme for 1924 shows that local school authorities are continuing their efforts to provide facilities for vocational training.

The new building in Galt, the corner-stone of which was laid in August, 1923, by Dr. Cody, was sufficiently completed in September, 1924, to be occupied by classes. The shop wing extends to the rear of the building and is notable for the excellent natural lighting available from three sides. The building is quite different from the usual style of modern schools, and from the front presents a fine architectural appearance with a distinctly scholastic effect.

The new building in Owen Sound, which was begun in 1923, was completed in 1924 and occupied at the beginning of the autumn term. It was officially opened by the Lieutenant-Governor of the Province and Dr. Cody on December 3rd, 1924. In addition to the usual classrooms, it is provided with generous shop areas for machine shop work, for woodworking, and for motor mechanics. Visitors at the opening commented favourably on the commodious shops and the well-planned lay-out of the machinery and equipment. The distinguishing characteristic of this school is the large amount of accommodation that was obtained for the amount of money spent.

In London the increase in attendance in 1923 was such that a six-room addition was made to the school during the year. The further increase in attendance in the autumn of 1924 was such that even with the addition the school was still congested, and the local school authorities have under consideration another addition of six rooms in 1925.

In Ottawa a substantial increase in the accommodation was provided by putting an additional storey on the shop wing. This additional accommodation, composed largely of classrooms, afforded much-needed relief to an overcrowded school.

New Building Projects

Niagara Falls has under consideration an addition to the Technical School to provide more accommodation for the technical classes, two of which are housed in the Collegiate Institute Building.

St. Thomas has determined on a programme for vocational education, which it is proposed to carry out in a new building on the east side of the city. Plans have been adopted by the Advisory Committee and the Board, and approved by the Department, and contracts let. It is hoped to have the building ready for occupancy in September, 1925.

The local school authorities in Chatham have dealt with the problem of providing accommodation for vocational classes in an unusual and yet interesting way. The question of accommodation for the industrial classes had become a pressing one, not only because the arrangement whereby they were housed in the Central Public School was an unsatisfactory one, but because the rooms occupied by these classes were needed by the public school classes. As the school authorities felt they were not in a position at present to enter on an adequate building programme, they purchased the Sanita Hotel property, facing on Tecumseh Park, which they were offered at a very reasonable price. The site is an excellent one, especially for evening class work. The remodelling of the building has been done at a very moderate cost, and has provided accommodation adequate for some years, and which is a great improvement over that formerly available. The hotel garage, a separate building, was converted with little expense into a first-rate machine shop, and the mineral bath-house once used in connection with the hotel has been made into a good woodworking shop.

In Beamsville, a substantial one-storey building has been erected to the side of the High School, providing accommodation, including a good farm

mechanics shop, for the establishment of an agricultural course under the provisions of the Vocational Education Act.

Evening Classes

The evening class programme continued to show progress during the year 1923-24. The summary statement at the beginning of this report shows the total enrolment to be 36,452, an increase of seven per cent. over the preceding year.

The increased enrolment is, however, largely due to steady growth of the evening classes in the larger centres, and especially in the centres which have entered on a day school programme and have provided special accommodation. In places like Windsor, St. Catharines, Kitchener, and Guelph the increases have been quite remarkable.

In smaller communities the growth in evening class attendance has been more irregular and uncertain. In some places the growth has been well maintained; in others there has been little growth, and in an occasional community a falling off in attendance. The lack of growth in certain places cannot be due to the fact that all the educational needs of the employed part of the community have been met. In some comparatively small places where a vigorous promotion effort has been made by those in charge, where teachers who are enthusiastic and keen, and who are acquainted with the needs of the students, have been in charge of the work, and where well-planned progressive courses of study outlined in definite units have been offered, evening classes have been quite as successful as in large places. One of the inspectors reports that in Wallaceburg is to be found a class in mechanical drawing doing work not excelled in any of the larger places.

The interest of the class in their studies, and the amount of work they have covered are due in part to the enthusiasm of the teacher. In every community of three or four thousand up there are doubtless a number of young men who would respond in the same way to the same opportunity if properly presented to them.

In Vellore, a very small community, a class in farm mechanics was carried on in the community hall with an enrolment of forty men and boys from the neighbouring farms. As no equipment of any kind was available, each student brought his own tools and material to work with. The class was most enthusiastic about their work, and maintained an average attendance of twenty-three for the course. While much of the success of the work was due to ability and interest of the teacher, yet the determining factor was the strong local public interest inspired in the first instance by Mrs. H. M. Atkin, a worker in the Women's Institute, who overcame all difficulties and proved that even in the smallest community there is a place for an evening class.

Successful classes in general education, dressmaking, millinery and motor mechanics were carried on in Elmira, due to a large extent to the public interest aroused by the vigorous promotion efforts of two or three members and officers of the Board. Burlington is another example of a small place maintaining a good evening school. With a population of 2,500 it has one hundred and four students in evening classes. As it is in a good fruit-growing district, the management try to meet the needs of the district by giving courses in fruit-growing. Arrangements are made whereby special subjects such as spraying and packing are dealt with in two or three lectures by experts.

Stationary Engineering Classes

A large number of men goes up annually for examination for stationary engineers' certificates. In a number of places classes for these men are provided in the evening school programme. Such classes have been a great help to the men preparing for examination.

In response to a very general demand from teachers and students a bulletin on the work required for the examination for Fourth and Third Class Engineers' certificates was prepared by the Technical Educational Branch in co-operation with the Board of Stationary and Hoisting Engineers. This bulletin has been very widely used and is in constant and steady demand. Requests are being continually received from men going up for examination for a higher certificate for a similar bulletin dealing with the advanced work, or for advice as to where the subject matter can be obtained. As there does not appear to be any single book or publication that exactly meets the needs of men going up for Ontario certificates, it would appear that a valuable service could be rendered them by the preparation of a bulletin dealing with the course of study required for Second and First Class certificates.

Summer School for Teachers of Vocational Subjects

The fourth annual session of the summer school for training teachers of vocational subjects was held in the Central Technical School, Toronto, from July 2nd to August 1st, 1924. This was the last session conducted under the provisional scheme for training shop teachers which was adopted in 1921 and planned to continue for four years.

The enrolment in 1924 was as follows:

	Part I	Part II	Total
Men	46	24	70
Women	45	18	63
Total	91	42	133

Examinations were held at the end of the session. The work of the first year was completed satisfactorily by twenty-seven women and thirty-six men, and of the second year by twelve women and nineteen men.

During the four annual sessions of the summer school that have been held the enrolment was as follows:

Year	Part I				Part II			
	Men		Women		Men		Women	
	Enrolled	Passed	Enrolled	Passed	Enrolled	Passed	Enrolled	Passed
1921	19	19	43	34	10	6	1	1
1922	17	15	56	41	13	13	29	23
1923	33	21	44	27	13	13	28	21
1924	46	36	45	27	24	19	18	12
Total	115	91	188	129	60	51	76	57

Practically all of the men and most of the women who have completed satisfactorily Part II of the teacher-training course are engaged in teaching either in vocational schools or in other secondary schools.

Experience has shown that a skilled mechanic is not necessarily a good teacher. The tradesman needs training in the methods of teaching, not only that he may learn how to do the new job, but that he may learn that it is a new job he has to do. It is not easy for the man or woman, recruited from the production shop to the school shop, to realize that the product of the school is trained boys and girls and not material things. The mechanic may pick and choose his raw material and may reject what does not suit him; the teacher must accept all the raw material that comes to him, rejecting none, and making the best possible product from each of a great variety of pieces, no two of which are exactly alike. A spoiled product in the commercial shop is a trifling loss when compared to a spoiled product in the school; the latter is a lifelong and irreparable loss.

The provisional scheme for training shop teachers that has been followed for the last four years has proved of distinct benefit to the teachers of practical subjects in the industrial and technical departments. A quite noticeable improvement in the quality of the teaching of these subjects has been evident. Shop teachers have learned that teaching is a trade, or a profession, requiring special training just as much as does printing or engineering. They have realized that there are fundamental principles of learning and that there is a technique of teaching based on these principles which must be followed in order to do successful work.

To be a successful shop teacher the machinist or the dressmaker must have skill and ability, not only in their trades, but also in the art of teaching, in the organization of teaching material, in methods of discipline, and in all the phases of the work of a teacher.

The summer school for vocational teachers has convinced the teachers now in service that, granted satisfactory trade training and certain personal qualities, ultimate success in teaching depends largely upon special training and continued efforts at self-improvement.

Ontario Training College for Technical Teachers

The need for giving to shop teachers in industrial and technical schools professional training similar to that given to academic teachers has been recognized for some years. For a time plans to give such training were delayed through negotiations regarding the establishment of a central institution for the whole of Canada to be maintained in part by the Dominion Government and in part by the several Provincial Governments.

Pending a decision regarding the adoption of such a co-operative scheme, the provisional plan previously mentioned was adopted whereby some measure of training would be given in summer courses. The four-year period for which this plan was to run expired with the summer course of 1924. In the meantime, the plan for establishing a central Training College for the whole of Canada has been abandoned. It became necessary, therefore, for Ontario to proceed with the development of a permanent and adequate scheme for training teachers of vocational subjects.

Experience with the plan of teacher-training by summer schools has shown (1) that the length of time used, viz., two summer periods of five weeks each, was not great enough to cover satisfactorily the work required, and (2) that,

as the regular day schools were closed for the holidays, it was not possible to give real practice teaching under actual classroom conditions.

To provide on a permanent basis an adequate and comprehensive scheme for the training of shop teachers arrangements have been made to establish in Hamilton the Ontario Training College for Technical Teachers. The college will be housed in a building to be erected in the near future on grounds adjacent to the Hamilton Technical Institute. The classes of the latter institution will be used for observation work and practice teaching. The first session of the new training school will be the spring term of 1925. The course consists of two parts: I and II. Part I, which consists largely of lecture and theoretical work, may be taken in two summer terms of five weeks each, or in one of the autumn or spring terms of ten weeks. Part II, which consists largely of observation and practice teaching, may be taken in the autumn or the spring term only.

The subjects of study to be given in the new teacher-training course are as follows:

English.
Principles of Teaching.
History, Principles and Problems of Vocational Education.
School and Class Management and School Law.
Trade Analysis and Courses of Study.
Study of Industries.
Methods of Teaching Industrial Subjects.
Practice Teaching.
Vocational Guidance.
Shop Plans and Equipment.
Mechanical Drawing.
Costume Design.

The course is so arranged that teachers in service who are required to take the training will be able to take one-half the course during summer holidays and will need to obtain leave of absence from their duties for ten weeks only during either the autumn term or the spring term.

The terms are so arranged that there will be no teachers-in-training at the College during the winter months. During these months the staff of the College will be used for field service, i.e., for conducting in outside centres short intensive courses of training for untrained evening class teachers, many of whom neither can nor will attend the regular sessions of the College, for giving assistance on the job to day school teachers in selecting and organizing teaching material, in planning and equipping shops, in adopting the most efficient methods of teaching, or in any way that makes for the improvement of teachers in service.

The requirements for admission to the Training College are as follows:

1. General education:

(a) The applicant for admission shall be required to pass an examination in general education. The examination will consist of a paper in arithmetic, a paper in composition, spelling, penmanship, and a paper in general knowledge of the subject which the candidate proposes to teach. The work in arithmetic will include the four fundamental operations, simple, vulgar and decimal fractions, and percentage.

(b) If the applicant submits satisfactory evidence of having taken two years' High School work or its equivalent, he may be exempted from the examination in arithmetic and in composition, spelling and penmanship.

2. Trade training and experience:

(a) The training or apprenticeship required shall be that usually demanded for a journeyman's qualifications in the trade concerned. Special training obtained in a day vocational school will be taken into account in considering the period of training.

(b) The experience required depends upon the trade. Experience in approved shops shall be required and shall be such as to show that the applicant is proficient in his trade and is acquainted with its recent developments.

3. Health and character:

Applicants shall be in good health, and shall be of good moral character, and shall possess the personal qualifications necessary to success in teaching.

In the case of teachers in service who may find it necessary to obtain leave of absence to attend during an autumn or a spring term, provision has been made that, if the local school authorities give them leave of absence with pay, a grant will be paid to the Board equal to one-half the salary allowed the teachers while in training.

Co-operative Apprentice Classes

The Technical Schools in some of the larger places are making progress in the matter of establishing relations with industry in the training of apprentices.

In Hamilton the co-operative scheme established last year is showing interesting results. The number of apprentices receiving instruction at the Technical Institute under this scheme is one hundred and twenty-eight, classed as follows:

(1) Apprentices engaged in manufacturing	69
(2) Printing apprentices	36
(3) Bricklaying and carpentry apprentices	23

The first group includes machinists, electric machinists, moulders, pattern makers, glass workers and draftsmen. All these attend classes at the Hamilton Institute under the following conditions:

(a) All apprentices taken on are to have an educational standard equivalent to High School Entrance standing.

(b) All apprentices are to attend classes at the Technical School for the required number of hours per week.

(c) All apprentices are to be paid the regular rate of pay for the time in attendance at day school. Pay is to be deducted, in case of absence from school, on the same basis as deductions are made for absence from work.

(d) The Technical Institute is to submit a weekly absentee report to the Company.

(e) All apprentices are required to write on an examination every six months, the examination to be set jointly by the Company and the school.

(f) The results of the examination will be taken into consideration in fixing rates of pay.

(g) The Company will pay the registration fees for the evening classes at which regular attendance is required, and non-attendance without reasonable excuse or permission will be considered cause for dismissal.

(h) The schedule of work will be prepared jointly by the Principal of the school and a representative of the Company.

Those from the larger firms attend four hours a week during the day and two hours weekly during the evening. They receive instruction in English, drafting and design, shop mathematics and shop practice. Those from the smaller firms attend four hours weekly during the evenings. They receive instruction in drafting and design, shop mathematics and shop practice.

The second and third groups, composed of printing and bricklaying apprentices, attend four hours weekly during the evenings and receive instruction as agreed upon between the school and the union. The conditions under which they attend are similar to those of the manufacturing apprentices.

The Central Technical School, Toronto, maintains a number of classes directly related to the training of apprentices or helpers in the trade. In bricklaying there is a full-time day class with five men enrolled, and an evening class with twenty-one apprentices working at the trade.

In the plumbing department there is a full-time day class with eight boys preparing for the trade, and, in addition, evening classes in plumbing with sixty-two apprentices and helpers, and in steam-fitting with sixteen apprentices, all in the trade.

In the printing department there are thirteen specials in the day classes and fifty from the trade in evening classes. In the motor mechanics shop, twenty-two special students from garages attend three days a week. So, also, in other departments such as the electrical, carpentry, painting and decorating, and drafting, there are either day or evening classses to which students from the trade only are admitted.

In Ottawa, where by agreement apprentices in the printing trade are required to attend the Technical School, there are twenty-one printing apprentices receiving part-time instruction in the school. Under the co-operative scheme for the training of apprentices referred to in my last annual report, there are twenty-four plumbing and thirty machine shop apprentices or helpers attending evening classes in Ottawa.

The whole problem of apprentice training is, however, too difficult to be solved by the schools alone. Employers, workers, the public, and the school, are all factors, and all have to be considered in the solution of the problem.

"Those engaged in industry, both on the employers' and the workers' side, appreciate and realize the importance and necessity of teaching apprentices all the various branches of the trade. Through specialization and commercialism the condition is brought about whereby the boy who works in one shop during all the years of his apprentice training is not given an opportunity to learn all there is to know of his trade. Quick and quack methods of turning out mechanics have proven failures in the last few years.

"A mechanic, in all that the word implies, has had practice, experience and instruction in the various processes of the trade. He knows all the processes of the trade, the relation of one process to another, and to the finished product. He can perform his work with an economy of material, a high degree of accuracy, and in a minimum of time.

"All sensible employers are in favour of the training of apprentices, as they know a well-trained mechanic is an asset to the industry. He earns the wages he receives, goes about his work in a business-like way without the necessity of a highly paid foreman telling him every few minutes what to do and how to do it. He can stand on his own feet.

"Organized labour is in favour of a well-directed apprenticeship plan, as well-trained workers maintaining a high standard for their work can maintain wages commensurate with the quality and quantity of work performed. Such workers take pride in their work and raise the standard of their trade to a higher plane, whereby the craft has the respect of the community.

"The public favours well-trained workers, as it knows when work is performed by well-trained mechanics it receives full value for money expended."

The Technical School has a substantial contribution to make to the training of efficient craftsmen.

In the school, both before the period of apprenticeship begins and while it lasts, the boy can be given a knowledge of fundamental operations and processes, of mathematics and science and their applications to industry, and of mechanical drawing or other means of representation used in industry, that he cannot under modern conditions of shop training obtain in the trade.

Some scheme of co-ordinating the several interests related to apprentice training—the public, the employer, the worker, and the school—is needed. Some industries of a monopolistic nature, such as the Bell Telephone Company, the Canadian National Railway or the Canadian Pacific Railway, are in a position to establish schemes of training maintained and controlled by the management. Industries not of this nature, such as the building trades, com-

prising a great number of employers, some of whom are large operators and others who have only a few employees, have not succeeded under present conditions in establishing and maintaining satisfactory apprenticeship schemes. The small shop feels that it has not time to train beginners, and the large shop says that it cannot afford to train apprentices for the other shops to steal away when they have become an asset to the shop.

The solution of the problem appears to be in the establishment of a commission or council, representing the several interests, with power to set up in the different trades schemes of apprentice training.

In Wisconsin apprentice training is under the supervision of the Industrial Commission of the State. This commission has power to fix rules and regulations regarding the training of apprentices, and to issue any general or special orders necessary to carry on the work. The commission has drawn up a standard form of indenture for apprentices and has laid down regulations for each trade. Under the law, all apprentices, regardless of age, at least up to the age of twenty-one, are required to attend an approved school for five hours a week during the first two years of the apprentice period. It is the duty of the commission to see that both the apprentice and the employer observe the terms of the agreement. In spite of criticism and difficulty, apprenticeship has grown steadily under the influence of State supervision. The following figures show the growth:

Wisconsin Apprentices

Year	New	Completed	Cancelled	Live
1915	222	0	15	207
1916	419	2	78	546
1917	512	6	172	880
1918	344	25	195	1,004
1919	334	88	189	1,001
1920	524	165	146	1,274
1921	382	152	141	1,353
1922	525	143	189	1,556

At a meeting of the executive committee of the New York Building Congress in January, 1922, a general committee on apprenticeship was established to assist the various building trades in the development of apprenticeship. This general committee, or apprenticeship commission as it is called, is made up of five employer members, five labour members, and three congress members, representing others interested in the building trades. The commission co-operates with all other organizations of trade, labour, or education, in bringing their activities together to further the best interests of training for the building trades. The commission has, among other activities, compiled a complete course of instructional project sheets for the training of apprentices of the carpentry trade, painting and decorating trade, upholstery trade, and electrical trade, and is preparing similar material for the bricklaying, cement mason, plumbing, and other trades.

Standard agreements regarding apprentices have been established. In some of the trades, as for example painting, the agreement between the employers and the union provides that if a boy enters a vocational school to prepare for the trade, at the completion of a two-year course in the school, he is allowed one year off the apprenticeship period by the union, and is guaranteed a position as a second year apprentice by the employers' association. The commission

has been able to increase very materially the number of apprentices entering the building trades, as for example, in the carpentry trade the number of apprentices was increased in 1923 from four hundred to one thousand and three hundred.

The Employment Service Council of Ontario has suggested a plan of apprentice training for the building trades, based upon the experience of the working of similar plans in other countries. The plan provides for the establishment of a Provincial Apprenticeship Board and that the administration expenses in connection with this board should be borne by the Provincial Government.

The Board would make indentures of apprentices with the parents or guardians of carefully selected boys wishing to be apprenticed, and would make arrangements, (a) so that the boys would get a practical all-round experience in their craft during about seven months of each year by taking different kinds of work with different employers, and (b) so that during the remainder of the year, about five months, they might get the necessary technical training in the technical schools.

Mr. J. M. Piggott, Hamilton, of the Association of Building and Construction Industries, Mr. J. F. Marsh, Toronto, of the United Brotherhood of Carpenters and Joiners, and Mr. John W. Bruce, Toronto, of the United Association of Plumbers and Steamfitters, were associated with the Employment Service Council in the preparation of the plan, and all have given it their hearty approval.

Bulletins

The course of study for the commercial departments of the vocational schools has been revised and remodelled to bring it into line with the more recent developments of commercial training. This course is being tried out in a number of schools, and, if found satisfactory, will become the authorized course.

A number of bulletins giving outlines of the work to be taken up in a number of subjects, with suggestions about methods of teaching, has been prepared and distributed in mimeographed sheets.

APPENDIX C

REPORT OF THE INSPECTORS OF CONTINUATION SCHOOLS

To The Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—

We have the honour to submit the following joint report on the conditions of the Continuation Schools of the Province for the year 1924.

G. K. Mills.
J. P. Hoag.

Toronto, December 31st, 1924.

During 1924, for the purpose of inspection of Continuation Schools, Ontario was divided into districts as follows: The Eastern District, which comprises all of Southern Ontario east of Toronto, that part of Northern Ontario lying along the T. and N. O. R. R., and along the C. P. R. from North Bay to Sault Ste. Marie, and the Islands of Georgian Bay; the Western District which comprises all of the Western Peninsula of Ontario, and the districts through which the main lines of the C. N. R. and C. P. R. run to Manitoba. Inspector Mills had charge of the Eastern District, and Inspector Hoag of the Western. In the Eastern District there are ninety-six schools; in the Western there are one hundred and three schools. These schools are situated at different distances from Toronto varying from 5 miles to 1,200 miles. To inspect them, therefore, involves very much travelling, much of it over branch lines of railway, or by motor or other conveyance.

Every school in the Province was visited once by an Inspector, and many schools where local conditions made it necessary were visited more than once during the year. In addition to the inspectoral visits to the established schools, the inspectors made nearly fifty visits to various places to discuss matters relating to continuation schools, and particularly to explain to boards of trustees and to ratepayers the regulations and provisions connected with the establishing of such schools.

New Schools

As a result of these visits and of the interest of parents and ratepayers, twelve new schools were established in 1924. These schools have all been in operation since September 1924, and each has been inspected once during the fall term. The new schools are as follows: One-teacher schools—Consecon, in Prince Edward County; Embro, in Oxford County; Fairbank, in York County; Minesing and Singhampton, in Simcoe County; Seely's Bay, in Leeds County; Little Britain, in Victoria County. Schools with more than one teacher—Hensall, in Huron County; Haliburton, in Haliburton County; Lynden, in Wentworth County; Port Carling, in Muskoka District, and Emo, in Rainy River District.

Several other districts were desirous of opening continuation schools, but the difficulty of providing suitable accommodation made it necessary for them to postpone action.

Already many enquiries have come in regarding the advisability and possibility of opening new schools in 1925, and arrangements have been made for the inspectors to visit a number of places early in 1925. Below in this report some mention will be made of the problems connected with the further extension of continuation schools in the Province.

Number of Continuation Schools

At the close of 1924 there were in Ontario 199 continuation schools, an increase of ten over the number in 1923. These schools may be classified as follows:—

Four-teacher schools	3
Three-teacher schools	35
Two-teacher schools	101
Schools employing the full time of one teacher and half time of a second teacher	18
One-teacher schools	42
Total schools	199
Total teachers	397

Although during the past ten years over thirty continuation schools have become high schools, the continuation schools now number more than the high schools and collegiate institutes combined, as there are but 183 such schools in the Province. It is a striking proof of the growth of interest in education in Ontario and of the benefit of the Adolescent Schools Act, that, notwithstanding the increasing attendance at the high schools, the attendance at the continuation schools has increased rapidly, and that this increase is very general throughout the Province.

General Character of the Work of the Continuation Schools

In all one-teacher continuation schools, the first two years of the high school course is carried on, and provision is made for teaching at least two languages to those students desiring to study such languages. In all other continuation schools, a full four-year high school course is carried on, this course leading to entrance to the normal schools or to matriculation into the universities. In many of the three-teacher schools and in the four-teacher schools, some part of the upper school or fifth year course of the high schools is taught.

It is a pleasure to be able to report that, in general, the teaching in the continuation schools is of a high order, that the teachers are earnest and efficient, and that the pupils are studious and interested in their work. Because of the earnestness of teachers and pupils and because of the small number of outside influences to be found in communities in which continuation schools are situated, the pupils of these schools make excellent records when they write the departmental and university examinations. While examination results alone should not be considered, yet these results, coupled with the reports of principals of other schools to which the graduates of our continuation schools go, show that good work is being done.

Character of the Work in Physical Culture, History and Science

But while the general work of the continuation schools is of a high order, it is necessary to point out several particulars in which better work is desirable.

(a) *Physical Culture*—In many schools the regulations relating to instruction and practice in physical culture are almost ignored or are superseded in summer by undirected play on the school grounds, and in winter by ignoring the matter of physical training altogether. It is true that many schools are provided with

wands, dumb-bells, Indian clubs, etc., but very few of the schools have vacant rooms or gymnasiums in which physical culture can be carried on satisfactorily. This is given by careless teachers as an excuse for neglecting physical culture.

While the inspectors realize the difficulties in connection with the work in physical culture, they believe that much useful and beneficial exercise can be secured even in the ordinary classrooms, or in the halls and corridors. In a number of schools really excellent work is being done, particularly in those schools where phonographs are to be found, and where suitable musical records are in use. In such schools the pupils enter into all physical exercise with vim and enthusiasm.

(b) *History*—The work in history also is not so good as is desirable. Far too many teachers rely on note giving or on notes made by the pupils themselves. Notwithstanding the fact that in the work in Canadian History the examinations and reports of the principal and staff will secure for the pupils departmental certificates, very many teachers excuse themselves for "note-book work" in history by the old excuse of examination requirements. The inspectors have tried hard to lessen or abolish the evil of "note giving" but each year the recent graduates from the collegiate institutes and normal schools, and many of the old-time teachers as well, continue the custom. Note giving or making is the easiest refuge for an inexperienced or inefficient teacher who fails to realize that history is to be learned through reading, through reflection, and through discussion, and not through memorizing dry-as-dust notes boiled down from an ordinary textbook.

Teachers appear to be led into note giving by two considerations: (1) The topical outline of the history courses, and (2) the character of the authorized text in Ancient History. From the character of the work done in our schools, it would appear that a mistake was made in the course of study when a method of teaching was adopted in Canadian History instead of a definite period of study. From the difficulty both teachers and pupils find in the work in ancient history, it would appear that a smaller and more entertaining textbook is desirable. If, along with such smaller book, each school library should provide various other books and pictures dealing with Greece and Rome in ancient times, we believe the work in history would be vitalized and made more useful.

(c) *Science of the Lower School*—In the work of science in the continuation schools, the teachers give far too much attention to preparing note books, and far too little to practical and experimental work. Perhaps this is due to the character of the textbooks authorized and to the system of requiring note books in science in former years. Greater attention to practical examination of plants and biological specimens is desirable.

Supply and Qualifications of Teachers

There is now an adequate supply of teachers for the continuation schools. School boards should in future have little difficulty in securing legally qualified and competent teachers. In fact, there is already a surplus of teachers qualified to act as assistants. In part, this condition is due to the industrial depression, which has led many young people to qualify as teachers because openings are not available in business life. In part, also, the condition is due to the changes in the course of study in the high schools, and to the fact that professional training is given in the normal schools. Whatever the causes, the fact remains that there is an adequate supply of teachers now available for continuation schools, and that after the 1924-25 class of the normal schools graduates, there will be a large

surplus of teachers qualified for assistants' positions in continuation schools. For these teachers openings will, of course, be found in the public schools.

Has the time not come for a forward movement in connection with qualifications of teachers of continuation schools? It is the opinion of the inspectors of these schools that it is very desirable to raise the academic qualifications of all teachers of continuation schools so that the minimum of requirements will be at least a professional first class certificate, and in addition the equivalent of two years' work in the general course in arts of the university. The inspectors believe that higher academic standing is more desirable at the present time than experience in public schools, before entering upon the work of the continuation schools. There should, of course, be no relaxation in regard to the requirements for training in the special subjects of art, physical culture, household science, etc. But after due notice to prospective students at the normal schools, the inspectors believe that if the first class certificate is restricted to public schools, and that if a special certificate of qualification be granted to the holder of a first class certificate who has covered the advanced academic work suggested, the teachers of the continuation schools will be better qualified for the training of pupils of secondary schools.

Continuation School Districts of the Future

The part of the Continuation Schools Act given below indicates the conditions under which continuation schools have been established in the past:

3.—(1) Subject to the Regulations, and to the approval of the Minister the Public School Board of any municipality or school section or a Separate School Board may establish and maintain one Continuation School with a staff of at least one teacher engaged for his whole time.

(2) The Board shall have in respect of such Continuation School all the powers conferred on Public or Separate School Boards, as to acquiring a school site, erecting buildings and additions to existing buildings and providing equipment for and paying the cost of permanent improvements and of the maintenance of such Continuation Schools.

(3) Subject to the Regulations, and to approval of the Minister, agreements may be entered into by two or more Public School Boards or by one or more of such Boards and one or more Separate School Boards for the establishment and maintenance of a Continuation School to be conducted in some place agreed upon by the Boards for the benefit of the pupils from all of such schools, and any such agreement shall specify the proportion of the cost of the establishment and maintenance of the Continuation School to be paid by each of such Boards or shall provide for the manner in which such proportion shall be determined.

(4) A Continuation School established under subsection 3 shall be under the control and management of a committee composed of not more than two-thirds of the members of each of the Boards by which it is established, who shall be appointed by such Boards respectively.

The continuation schools now in existence have been formed under the above conditions. It will be seen that establishment depends, in the main, upon local action, and that the location of schools to a certain extent has been somewhat haphazard. Fortunately, with the exception of one or two schools, all the schools now in existence are logically located in suitable community centres. But it would appear that the ultimate has been reached under existing conditions, and that some comprehensive plan for the establishment and support of continuation schools is desirable if districts now deprived of secondary school advantages are to have such advantages provided. Some plan for aid in constructing buildings and for maintaining the schools after the buildings are constructed is desirable. There should be some authority, township or county or provincial, to determine where schools may best be placed and how such schools are to be supported.

The above suggestions are made with a view to having attention directed to a matter which is arousing considerable discussion among the members of county councils, and among those interested in rural education.

APPENDIX D

REPORT OF THE HIGH SCHOOL INSPECTORS

To The Honourable G. Howard Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—We have the honour to submit herewith the following joint report on the Collegiate Institutes and High Schools of the Province for the academic year 1923-24.

We have the honour to be,
Sir,
Your obedient servants,

J. A. Houston,
I. M. Levan,
G. F. Rogers,
High School Inspectors.

Toronto, December 31st, 1924.

Attendance

The increase in the number of students enrolled in the High School classes that has been commented on in the last two or three reports of the High School Inspectors is perhaps even more noticeable this year than ever before. Although at the time of writing the exact figures showing the increase in the attendance are not available, some idea of the rate of expansion may be gained from the fact that from September, 1922, to September, 1924, there has been an increase of 237 in the number of teachers employed in our High Schools and Collegiate Institutes.

Various reasons have been given for the unprecedented growth in these secondary schools. Economic conditions in the Province have had their effect. It is an old saying that "hard times fill the schools." The Adolescent Act may have had some effect in certain centres. A far greater factor, and one that has made the successful operation of the Adolescent Act possible, is the development of a strong public sentiment in favour of giving our young people the advantages of more prolonged training that they may enjoy a more abundant life.

But in addition to all these we believe that the new courses of study and examination requirements have encouraged many pupils to remain in school for a longer period than they would have remained under the old conditions. The plan of allowing candidates to write off their examinations one at a time has had its effect in holding pupils in the Middle and Upper Schools who, for various reasons, could not undertake a heavy programme of examinations during any one year. In fact, one of the most cheering signs in recent years is the large number of pupils who are now entering the Upper School classes.

Accommodations

The popularity of the High School has not been without its accompanying embarrassments. School Boards all over the Province have had to face the problem of doing their whole duty by the young people of their communities in the way of providing adequate school accommodations and at the same time not overburdening the taxpayers whom they represent. To their credit be it said that in the vast majority of cases the boards have not shirked their responsibilities and the ratepayers have cheerfully acquiesced in the demands on their pockets.

We would like, just here, to bear testimony to the splendid work being done throughout the Province by the men and women who, as members of High School Boards, serve, without remuneration, a sometimes too critical public.

On another page of this report will be found cuts of some of the new schools opened during the last academic year or, in a few cases, during the fall term of 1924.

The largest of these are the Jarvis Street Collegiate Institute in Toronto, built to replace the school on Jarvis Street that grew out of the old historic Toronto Grammar School; and the Delta Collegiate Institute in Hamilton, built to serve a recently formed High School district in the eastern part of the city.

Some of the special features of the new Toronto Collegiate are the four exceptionally well furnished science laboratories with separate rooms for preparation, a conservatory with a fountain and a pool to serve as an aquarium, an auditorium to seat 1,000, a large modern cafeteria, a gymnasium with swimming pool and showers, armouries, a rifle range and metal lockers built into the corridor walls to serve more than 1,000 pupils.

The new Hamilton Collegiate is a beautiful building of Tudor-Gothic architecture in the form of a T, thus enabling the architects to place the large auditorium with a seating capacity of 1,050, the two gymnasia and the cafeteria where they will have perfect lighting and will be some distance away from the class-rooms. A significant fact in connection with this school is that when the Delta High School District was set apart in 1923 the attendance in the temporary quarters then in use was 180; when the new building was opened in September, 1924, the attendance increased to 688, and this without very materially affecting the attendance at the Central Collegiate.

It would appear that, up to a certain limit, the more schools the more pupils.

Space does not permit of more than a passing reference to the fifteen other new High School buildings opened during the past year.

Hanover, Mimico, Port Colborne, Thessalon and Timmins marked their transition from successful Continuation Schools to High Schools by erecting substantial buildings with modern equipment.

The Timmins building, although opened only last September, is already filled almost to capacity and will have to be enlarged within a very short time to provide for the young people—many of them with foreign names but with loyal Canadian hearts—who are seeking an education in that thriving northern town which has had such a phenomenal growth from the mining camp of a few years ago to the present modern town with a population equal to that of some of our Southern Ontario cities.

As will be seen from the illustrations on another page, the Mimico and Campbellford High Schools are good examples of the type of building best suited to the needs of a growing community where additional units will have to be built from time to time.

The new schools in Athens and Bradford, built to replace others recently burnt down, are on similar lines.

It was to be expected that the extension of Toronto's suburban area would make necessary the building of a High School in Mimico, but that the same influence should be felt as far away as Richmond Hill would scarcely be credited unless one visited the new High School recently opened there and saw how rapidly its class-rooms are being filled.

It is worthy of note that in the recent building programme, more attention than ever before is being paid, not only to the adaptability of the new buildings to enlargement, but also to the size and suitability of the school sites.

In the eastern part of the Province, the Carleton Place Board selected a splendid site on the banks of the Mississippi River and on it have erected a thoroughly modern school. Three years ago, when this school was housed in the old building, there were only four teachers on the staff; to-day the staff has doubled and the attendance increased to nearly 250.

Farther west, Caledonia, Mitchell, Paris and Uxbridge have left the sites of their old schools and their fine new buildings are surrounded by spacious grounds that give ample opportunity for carrying on all forms of sports and games.

So little of the old school remains, that the modern building erected in Aurora may properly be classed with other new schools such as those at Mimico and Richmond Hill where, on account of their nearness to Toronto, rapid expansion may be looked for.

The modern type of school with its straight corridors and uniform standard class-rooms does to a greater or less extent sacrifice architectural beauty to utility. The architects of the new addition to the Galt Collegiate Institute have, fortunately, been able to preserve, perhaps even to enhance, the beauty of that fine stone building with its picturesque setting on the banks of the Grand River.

Among the features of this enlarged school, now called the Galt Collegiate Institute and Technical School, are the two projecting wings containing the gymnasium to the north and the auditorium to the south. The auditorium, called appropriately "Tassie Hall" in honour of the Principal who gave the old Galt Grammar School a national reputation, is beautifully proportioned, seated with opera chairs, and provided with green velure curtains on the stage and windows.

With the growing demand for vocational education there is a corresponding increase in the number of such composite schools as those in Galt, Guelph, Sarnia, Kitchener-Waterloo, St. Catharines and Weston. The large and well-planned addition to the Owen Sound Collegiate Institute, recently opened, is mainly used for vocational classes, while at the same time it greatly improves the general accommodations for the students taking the academic courses.

Fort William is completing the composite school erected there some years ago by connecting the academic and the vocational units. When completed this will be the most imposing building in that growing northern city.

The historic Goderich Collegiate has recently been remodelled and enlarged.

Oshawa has built a splendid addition to the High School, the chief feature of which is a large central auditorium enclosed by two tiers of corridors into which the new class-rooms and science laboratories open.

An extensive addition has been built to the Weston High School to accommodate a large number of students in both the vocational and the academic courses.

The new wing added to the North Bay Collegiate greatly improves the

appearance of the building and illustrates the wisdom of erecting a school which is so laid out as to lend itself to extension.

Toronto has difficulty in keeping pace with its rapidly increasing High School population and, despite recent additions to every city Collegiate, nearly all the schools in the city are overcrowded.

The new Bloor Street Collegiate, which is nearing completion, will take care of the pupils now attending the Davenport High School and relieve the congestion elsewhere.

The following High Schools have also been enlarged: Beamsville, Cornwall, Markham, Meaford, Midland, Niagara Falls South, and Oakville.

While this brief report deals almost exclusively with the material advance that has been made during the past year in the Ontario High Schools and Collegiate Institutes, we are not unmindful of the fact that educational progress is not expressed in brick and stone nor measured by increases in the number of pupils enrolled. During the past year your Inspectors have been impressed, perhaps more than ever before, with the quality of the work carried on by the band of more than 1,600 High School teachers in the Province. Thanks to them, the school is no longer a place where pupils go reluctantly to recite dull lessons, a dreaded place of drudgery and constant inhibitions. It is the centre of all the activities—mental, physical and social—of the young people of the community.

It appears to us as we go up and down through the Province that the teacher has come into his own, that he now occupies a recognized place as an influential citizen, that the home and the school are closer than they have ever been, and that a conquering host of High School boys and girls are growing up in the Province who are looking forward, with confidence in themselves, to the tasks of a larger life.

APPENDIX E

REPORT OF THE DIRECTOR OF RURAL SCHOOL ORGANIZATION

To The Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—I have the honour to submit herewith my annual report on the Organization of the Rural Schools of the Province.

I have the honour to be,
Sir,
Your obedient servant,
W. J. Karr,
Director of Rural School Organization.

Toronto, February 17th, 1925.

1. Number of Rural Schools

The following table of comparative statistics indicates the growth of the rural schools during the period 1921-1923:

	1921			1922			1923		
	No. of School Sections	No. of School Houses	No. of One-Room Schools	No. of School Sections	No. of School Houses	No. of One-Room Schools	No. of School Sections	No. of School Houses	No. of One-Room Schools
Counties	4,746	4,807	4,330	4,742	4,805	4,302	4,747	4,811	4,297
Districts	715	741	659	745	763	669	769	787	686
Total	5,461	5,548	4,989	5,487	5,568	4,971	5,516	5,598	4,983

It is evident that the number of rural school sections has increased by about thirty each year during the period, mainly because of the organization of new sections in the Districts. The number of school buildings has increased at practically the same rate, and for the same reason. The number of one-roomed schools has remained almost stationary, there being a slight increase in the Districts, and a slight decrease in the Counties. In the latter case, the decrease is apparently due to the consolidations that have been established during the period.

II. Attendance in the One-roomed Schools

The following table classifies the one-roomed schools on the basis of their average attendance for 1923:

Average attendance	No. of Schools in Counties	No. of Schools in Districts	Total in Province
1	0	2	2
2 or less	9	11	20
3 " "	35	19	54
4 " "	64	33	97
5 " "	115	62	177
9 " "	553	194	747
10 " "	671	220	891
14 " "	1,416	378	1,794
19 " "	2,395	507	2,902
20 or more	1,902	179	2,081
	4,297	686	4,983

Average attendance	In Counties	In Districts	In Province
Percentage of schools under 5	1.5	4.8	1.9
" " " 10	12.9	28.3	15.0
" " " 15	33.0	55.1	36.0
" " " 20	55.7	73.9	58.2
" " 20 or over	44.3	26.1	41.8

That conditions are not improving in respect to attendance in the one-roomed schools is evident from the following table:

Percentage of One-roomed Schools with an Average Attendance

	Under 5	Under 10	Under 15	Under 20	20 or Over
1921	2.0	12.9	32.6	55.3	44.7
1922	2.0	13.3	33.0	55.1	44.9
1923	1.9	15.0	36.0	58.2	41.8

Such statistics are depressing to those who realize their significance. Approximately one school in every six has an average attendance of less than ten pupils; one school in every three has an average of less than fifteen; three schools in every five have an average of less than twenty; and only two schools in every five have an average of twenty or more. It is generally admitted that the minimum average of a school for economical management and efficient instruction should be placed at twenty pupils. Nearly sixty per cent. of the one-roomed schools are therefore working below their capacity. They are absorbing energy, teaching power, and money in the education of fewer children than they are capable of handling. They are not providing the children with adequate opportunities for competition and co-operation which are essential in the development of their mental and moral potentialities. They are, therefore, not fully discharging their most important function, the development of an intelligent and vigorous citizenship.

III. Cost of Maintenance of Schools with Low Average Attendance

The following tabulated statements show the average cost per pupil in 1923, for the maintenance of three groups of schools: (1) those with an average attendance of one to five; (2) those with an average attendance of six to ten; and (3) those with an average attendance of one to ten.

Schools with Average Attendance 1 to 5.

	No. of schools	Total Average Attendance	Cost to Locality	Legislative Grants	Total Cost	Average Cost per Pupil to Locality	Average Cost per Pupil to Government	Total Cost per Pupil
Counties..	115	463	$70,004 58	$46,316 01	$116,320 59	$151 20	$100 03	$251 23
Districts..	62	245	35,077 00	24,417 00	59,494 00	143 17	99 66	242 83
Province..	177	708	105,081 58	70,733 01	175,814 59	148 42	99 91	248 33

Schools with Average Attendance 6 to 10.

Counties..	556	4,597	452,350 22	205,519 79	657,870 01	98.40	44.71	143.11
Districts...	158	1,294	107,269 00	88,494 00	195,763 00	82.90	68.39	151.29
Province..	714	5,891	559,619 22	294,013.79	853,633 01	95.00	49.91	144.91

Schools with Average Attendance 1 to 10

Counties..	671	5,060	522,354.80	251,835.80	774,190.60	103.23	49.77	153.00
Districts..	220	1,539	142,346 00	112,911.00	255,257.00	92.49	73.37	165.86
Province..	891	6,599	664,700.80	364,746.80	1,029,447.60	100.73	55.27	156.00

A comparison of these figures with those of 1922 shows that the costs have risen considerably during the year. The following table gives the relative amounts for the two years:

Total Cost per Pupil of Average Attendance

	In 177 Schools with average 1 to 5	In 714 Schools with average 6 to 10	In 891 Schools with average 1 to 10	In 4,092 Schools with average over 10	In all Rural Schools
1922.....	$247.32	$138.99	$151.02	$77.03	$80.26
1923.....	248.33	144.91	156.00	83.98	87.36

The figures given in the above tables are arresting. To maintain 177 schools for the instruction of 708 pupils at a cost of nearly $250 per pupil per year, of which the Government pays approximately $100 per pupil, places a severe strain on the public purse. The cost per pupil in this group of schools is almost three times as great as the average cost in all the rural schools. The maintenance of nine hundred schools for the instruction of less than seven thousand pupils at a cost of considerably over a million dollars, or an average of over one hundred and fifty dollars per pupil, is a matter of serious public concern. The schools in this group cost almost twice as much per pupil as the rest of the rural schools. They accommodate less than one-twentieth of the rural school attendance yet they are responsible for one-twelfth of the total expenditure for rural schools. Such large expenditures can be justified only on the ground that no other methods of providing equally efficient instruction are available. But, as is well known, the Public Schools Act, in Section 74, provides a simple plan for "doubling up" small schools, thereby securing more economical management and more efficient instruction.

IV. The Consolidation of Rural Schools

During the past year consolidated schools were completed and opened at Charlton, Gooderham, Sundridge, and Byng Inlet. There are now twenty-eight schools in operation. A pleasing feature of the recently erected schools is their moderate cost. A three-roomed, frame building at Byng Inlet was built at a cost of slightly more than nine thousand dollars; a four-roomed, brick-veneered building at Gooderham at a cost of twelve thousand dollars; and a four-roomed, steam-heated, brick building at Sundridge at a cost of twenty thousand dollars.

Reports from the consolidated schools indicate that they are working efficiently and with satisfaction to the people who support them. The cost per pupil of average attendance for the maintenance of the consolidated schools is $70.54. If the sums expended in paying off debentures are included with the maintenance costs, the average cost per pupil is $84.44. These amounts are considerably below the average cost of all the rural schools, viz., $87.36 per pupil, and the average cost of the urban schools, viz., $87.45 per pupil.

As pointed out in a previous report, the present scheme of school consolidation depends upon the principle of voluntary co-operation among school sections, which is difficult to secure upon an adequate scale. This to a large extent accounts for the comparatively slow progress of the movement.

Statistics of the consolidated schools will be found on pages 278-282 of this report.

V. The Suburban School Problem

During recent years a difficult situation which has engaged the attention of the Department of Education has grown up in areas adjacent to many of the larger cities. Large numbers of people who work in the city have established homes outside the city limits. Many have been attracted there by the possibility of owning their own homes and bringing up their children in more healthful surroundings than the congested districts of the city would afford. Some have admittedly established their homes there in order that they may enjoy all the advantages of the city, while avoiding its high taxation.

Two types of residential district have grown up in these suburban areas: (1) the wealthier district with large and valuable homes occupied by people of considerable means, and (2) the more modest district with small homes occupied by people of moderate or little means. School sections including districts of the former class have a relatively high assessment per classroom, and have, therefore, sufficient wealth to build and maintain schools without incurring an unduly high school tax. But school sections made up of the latter type of district have a difficult problem to meet. The school population is large, necessitating heavy expenditures for school buildings and teachers' salaries. The unit of assessment per classroom is relatively low, and the rate of taxation for school purposes is therefore high.

The variation in the rates of school taxation among sections in suburban areas is very striking. In one township that is entirely suburban the rates for school purposes for 1924 ranged from 4.3 mills to 38.1 mills. When due allowance is made for the difference between the standards of assessment in the city and in the suburban areas, it is still found that several suburban sections are paying considerably more for their school facilities than is the city to which they are adjacent. It is in fact quite evident that many of the poorer suburban sections are required to pay more than they can well afford, while rich sections are not assuming their fair share of the financial burden.

V. Possible Remedies for Existing Deficiencies

1. The School with Small Attendance.

One solution of the problem of the school with small attendance is provided by Section 74 of the Public Schools Act, which authorizes school boards, upon the resolution of the electors, to arrange with neighbouring school boards for the accommodation of their pupils, and to make such transportation arrangements as may be necessary.

Why is this simple and obvious solution so seldom adopted? One reason is that the school grants, township and legislative, are so generous that the inducement to continue the school is strong. A concrete case, recently cited by the Public School Inspector of one of the most prosperous counties of eastern Ontario, will illustrate the difficulty. A certain school in this inspectorate had, last year, only one pupil on the roll. The teacher was paid a salary of $800. The township grant was $500, and the legislative grant was $420. It is quite possible that the surplus of grants over salary was nearly sufficient to pay the other expenses of the school. This case is typical of conditions that are fairly frequent. There is no financial incentive to school boards to close these small schools and secure accommodation for the pupils elsewhere. Moreover, there is a disinclination among sections to co-operate with other sections for this purpose.

2. Inequalities in School Taxation.

Inequality in school taxation among sections in the same township is a condition that prevails not only in suburban areas, as pointed out above, but also

throughout the rural areas generally. Few people deny the desirability of equality of financial obligation in relation to elementary and secondary education. The education of its youth is quite properly regarded as the duty of the municipality, in which all the ratepayers are jointly and equally responsible. The principle is fully recognized by all urban municipalities. It is recognized in rural municipalities so far as secondary education is concerned, for the cost of secondary education for county pupils is provided by a general county rate. But equality of financial obligation is far from being recognized in rural elementary education. It is no unusual thing for one man to pay twice as much as his neighbour for similar school facilities because he happens to be in a different section.

The remedy for this condition is already in the hands of the township councils. Section 96 of the Public Schools Act is designed to remove inequalities in school rates among sections. It provides that each township council shall raise by a general township rate a certain minimum sum for each principal and for each assistant teacher, this minimum sum being graded according to the average assessment of the sections of the township. Practically every township in the Province levies only the *minimum* amount for each section, ignoring the fact that it may levy a larger amount if it wishes. For instance, there is nothing to prevent a township with an average assessment of $100,000 per section, from levying $1,200 for each principal teacher if it so desires, instead of the minimum of $600 required by the Act. If township councils would assume the authority, it is apparent that they could overcome practically all inequalities in school taxation.

The remedy for inequalities in suburban areas is further provided for by Section 15 of the Public Schools Act, as amended by Section 5 of the Schools Acts Amendments, 1921, and by Section 5 of the Amendments, 1922. This Section permits a township council by a majority vote to pass a by-law setting apart any area contiguous to a city as a township area, and to provide for the administration of the whole area as a single school unit. Up to the present, however, no township areas have been established, though there are many suburban districts adjacent to the larger cities where such an arrangement would obviously be advantageous.

3. Absence of Educational Facilities Beyond the Elementary Course.

There is already provided in the Schools Acts the machinery necessary for setting up certain services that would greatly improve educational conditions in rural communities. The following are examples:

(*a*) Provision is made for setting up continuation schools through the united action of several sections, as specified in Section 3 (3) of the Continuation Schools Act.

(*b*) Provision is made in the Industrial and Vocational Education Act for the establishment of winter classes for the academic and vocational training of those pupils beyond the elementary school age who do not wish to take the ordinary secondary school course.

(*c*) Provision for the amalgamation of several sections is authorized by the Consolidated Schools Act.

(*d*) Provision for special instruction in agriculture, household science, and manual training, may be arranged by a township council, a school board, or a group of school boards under the authority of Section 113 of the Public Schools Act.

(*e*) Provision for the medical and dental inspection of pupils is authorized by Section 76 (j) of the Public Schools Act.

The desirability of these various provisions is implied by the existence of legislation authorizing their adoption. All are supported by generous legislative grants. Nevertheless, not one of these schemes has been extensively adopted in the Province. The reason is that they all depend for their success upon co-operative action among school sections, and it is a most difficult if not impossible task to secure such co-operation. In fact, the fundamental weakness of the section scheme of organization seems to be the extreme difficulty, if not impossibility, of inducing sections to co-operate upon an adequate scale for a common educational purpose. Urban municipalities are able to secure varied educational advantages because the combined resources of the people are sufficiently great to provide them. Acting singly, few school sections would have sufficient resources for this purpose; acting together in sufficient numbers they would have. The problem, therefore, is to get the people of a large area to combine their resources for a common purpose.

VI. Township Boards the Remedy for Present Deficiencies

In the absence of any tendency or ability on the part of school sections to take advantage of the means already provided for remedying the evils and deficiencies outlined above, the best method to adopt would be the abolition of the section unit. The substitution of the township as the unit of administration would secure co-operative action in an area having sufficient resources to provide facilities beyond the elementary school course. This is admittedly the thing most needed in rural education to-day.

There is a growing tendency in other parts of the world to abandon the smaller local unit of administration for the larger. Great Britain has substituted the county unit for the parish unit. Many progressive states of the American Union have discarded the district unit and have established instead the township or the county unit. British Columbia has set up a municipal system of administration for the schools. In all these cases the unit established coincides with the taxation unit. In Ontario the smallest unit for taxing purposes is the township, and for that reason it is suggested as the unit for school administration. The machinery for levying and collecting taxes is already in existence; no new machinery would be required.

The enlargement of the unit of administration from the section to the township would tend to secure greater economy in the expenditure of money and effort, greater equality of educational opportunity and of financial obligation, and higher efficiency in the work of the schools.

APPENDIX F

REPORT OF THE INSPECTOR OF MANUAL TRAINING AND HOUSEHOLD SCIENCE

To The Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir:

I have the honour to submit herewith my twenty-fourth annual report of Manual Training and Household Science as carried on in the schools of the Province.

I have the honour to be, Sir,

Your obedient servant,

Albert H. Leake.

Toronto, December, 1924.

The General Situation

Manual Training and Household Science in the schools of the Province have proceeded generally along the course followed in previous years. Owing to financial stringency and the need for economy not many new centres have been opened, and in a few cases the work has been temporarily restricted. In one city where it was proposed to discontinue temporarily the teaching of these subjects the people of the district guaranteed to provide $2,000 to carry on the work to the close of the financial year. This guarantee was backed by the signature of a prominent citizen. This tendency towards what I cannot help thinking is false economy is, however, rapidly disappearing and the situation is assuming its normal aspect.

The character of the work being done in the Manual Training room is showing improvement in several directions. More needed attention is being paid to the condition of the tool equipment. It is being recognized, at last, that in order to accomplish good work the tools must be kept in good working condition. The schools that are turning out the best work are doing so owing very largely to the fact that the tools are kept sharp and clean. Methods of arranging tools are also being improved. The necessary periodic checking of the tool equipment is much facilitated by such an arrangement of tools that shows at once any loss in the equipment.

The character of the drawing and the lettering attached still shows improvement. Methods of teaching these subjects are being adopted that make a more interesting appeal to the pupils who, generally speaking, prefer to the drawing, the constructive processes with concrete material. Mechanical and working drawings are being presented in such a way that the boys more readily see that all construction depends for its efficiency upon a well thought out and developed plan.

Elementary sewing throughout the schools is becoming more common, particularly in the smaller places and rural districts where hitherto the subject has not been considered.

The teachers of cookery and general household management are departing very largely from the fractional recipe, where a microscopic quantity of material is cooked, for the larger quantity based on the family meal and the result of this is that the teaching of the schools is being carried into the homes.

While the equipment generally is ample and in one or two cases elaborate, there is one aspect in which most schools are still lacking and that is in the provision of illustrative material.

In every Household Science department there should be a collection of food products, both in their raw and manufactured states. I noticed in one school a collection of posters from all the food product manufacturers in the city. This could be carried a step further by making a collection of all the food products themselves manufactured in the locality of the school. Various manufacturers send out specimens showing the processes their goods undergo during the course of their manufacture from the raw material. Charts showing the chemical composition of the various foodstuffs should be provided, and every effort made to obtain such a collection of charts, illustrations and specimens as will give life and vitality to the teaching of the various problems that Household Science has to deal with. Charts and models illustrating the principles of plumbing, ventilation and the various labour-saving devices that are now used in the home might also be provided.

The work in both subjects is generally carried on in a centre which the children from surrounding schools attend at stated periods. Objection is sometimes raised to the fact that the children have to lose time in travelling from their school to the centre, but in some cases this is prevented by allowing the children to attend for a whole half-day.

In order to overcome the difficulty above referred to, some schools are employing a Manual Training and Household Science instructor to take charge of all the manual activities of the one school throughout all the grades and this plan is working smoothly and with great efficiency.

Constructive Work in the Primary Grades

The elementary manual training being done in the primary grades is rapidly growing in usefulness and popularity as its aims and objects are being understood by the parents and its scope appreciated by the teacher. Trustees are becoming more willing to vote the small sums necessary to carry it on, and wherever introduced with moderation and tact much good is accomplished.

The assistance that constructive work can give to the other subjects in the curriculum is, however, not yet fully understood. It is too often looked upon as an entirely new subject, having no relationship to the other subjects included in the course.

Every student now leaving the Normal Schools is well prepared to carry on this elementary manual training, having had a brief but thorough training in the use of simple tools and materials.

The new curriculum recently issued combines art with constructive work and provides for minimum and supplementary courses. This combination and rearrangement will do much to help both subjects and should greatly facilitate their entry into the schools.

The work of the lower grades is very important as a foundation for the more advanced programme of the Manual Training and Household Science rooms.

Summer Courses and Saturday Classes

During the summer the usual holiday courses were held in Manual Training and Household Science for the purpose of qualifying for the elementary certificate which is valid in the rural schools of the Province. A gratifying feature of these courses is the large number of teachers that, as a result of the instruction received, introduce the subjects into their schools the September following the course.

The Saturday Classes held at Hamilton Normal School in previous years were continued, with the addition of classes for Part II, both in Manual Training and Household Science. The classes were opened at the direct request of the Public School Inspector who, in referring to them, says: "I assure you, personally, that nothing in the inspectorate of Wentworth has done more in bringing about a higher proficiency in the rural schools and a more elevated tone than that of the work of Household Science and Manual Training. It has also met a long felt want in appealing to the interests of retarded boys and girls."

One decided advantage of these classes is that instruction is being given to teachers while they are actually in service, and they can go back to their schools from week to week and put into immediate practice the lessons they have received. Another advantage is that they are able to bring their problems for common discussion and solution.

Training of Teachers

In addition to the Summer Courses and Saturday Classes above mentioned which qualify for the elementary certificate we have a one-year course, given at the College of Education, for the purpose of qualifying Household Science teachers for the urban schools where Household Science rooms are equipped. This course is given by capable and efficient instructors who are well acquainted with the requirements and possibilities of the schools of the Province.

Since the course for training Manual Instructors was discontinued at the Ontario Agricultural College, owing to the College requiring all its staff and facilities for other purposes, no measures have been taken to provide a supply of teachers of Manual Training for urban schools. The need for such a course has been apparent for some time, and I am pleased to state that measures are now being taken to remedy this deficiency.

The Rural School

There are now in the Province more than six hundred rural schools in which at least one hot dish is served at the noon lunch to supplement the food brought from home. No departmental grant is paid for this alone, but when it is accompanied by some definite household science teaching a grant is paid to the Board to aid in the purchase of equipment and supplies and also to the teacher, as some recognition of her extra efforts.

The almost unanimous opinion of the teachers in those schools where the lunch is served is that the health of the children is improved, discipline is rendered easier, that the attendance in bad weather is more regular and that the pupils are able to do better work in the afternoon.

The Public School Inspectors generally throughout the Province are taking great interest in this work to promote its establishment wherever possible.

APPENDIX G

REPORT OF THE INSPECTOR
OF
ELEMENTARY AGRICULTURAL CLASSES

To The Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—

I beg to submit for your consideration a report on the Agricultural Classes in connection with the schools of the Province for the year 1924.

I have the honour to be, Sir,

Your obedient servant,

J. B. Dandeno,
Inspector of Elementary Agricultural Classes.

Toronto, December 1924.

Public and Separate Schools

The progress in agricultural education in the Public and Separate Schools and in the High Schools is indicated in the lists given in this report. It is noteworthy that instruction is being given with effect not only in the rural schools but also in the city schools. In some inspectorates practically all of the schools are now carrying on classes in agriculture and the character of the work is steadily improving. In some communities, however, a considerable amount of "missionary" work is still necessary.

About one-half of the schools now maintaining classes in agriculture have teachers who hold certificates in agriculture. If the High Schools would undertake in greater numbers the teaching of agriculture as provided for in the Regulations the supply of teachers qualified in this subject would be greatly increased.

The chief facts relating to the present status of the work as carried on in Ontario are given below:

The number of Public and Separate Schools qualifying for grants each year, commencing in 1903, is given in the following table:

Year	No. of Schools	Year	No. of Schools	With School Gardens	With Home Gardens
1903	4	1914	264	208	56
1904	7	1915	407	222	185
1905	6	1916	585	324	261
1906	8	1917	989	466	523
1907	2	1918	1,020	588	432
1908	14	1919	1,408	618	790
1909	16	1920	1,648	702	946
1910	17	1921	1,804	690	1,114
1911	33	1922	2,047	796	1,251
1912	101	1923	2,288	843	1,445
1913	159	1924	2,285	831	1,454

School Fairs are under the direction of the Department of Agriculture in co-operation with the Public School Inspectors and teachers. Each county is provided with one or more Agricultural Representatives who are kind enough to offer assistance to the teachers of rural schools, not only in connection with the School Fairs, but also in other matters as time and circumstances may permit.

Several School Fairs were visited during the fall of 1924, but on account of the limited time at my disposal, the number was relatively small. Many requests are made from teachers and others to attend these institutions, often to act as judge of exhibits made by pupils. Occasional visits have been made also to some of the winter short courses conducted by the Department of Agriculture under the direction of the Agricultural Representatives. The object of these visits is to follow up, if possible, those boys who may have had some agricultural instruction in a High School and who are following up the work introduced to them in High or Public Schools.

High Schools

The number of secondary schools carrying on classes in Agriculture is steadily, though slowly, increasing. Agriculture is now accepted as an option against Physical Science for Junior Matriculation of the Middle School in Arts, Commerce, Engineering, Dentistry, Pharmacy and Music of the University of Toronto; and for general Junior Matriculation in Queen's and Western. It is not only optional as against Physical Science of the Middle School for Entrance to Normal Schools, but is highly desirable on account of the fact that about 2,500 of the Public and Separate Schools are now carrying on classes in Agriculture but cannot secure teachers qualified in this subject since relatively few High Schools are giving instruction in it.

In addition to those secondary schools which are now carrying on classes in Agriculture many others were visited with a view towards explaining the situation in order that classes in Agriculture might be introduced.

In the following table, "x" indicates that Agriculture was carried on during the term specified and "o" indicates that the work has either not yet been introduced or has been temporarily dropped.

Courses are provided at the Ontario Agricultural College covering two consecutive summers of five weeks each. These courses were introduced in 1913, and the following list gives the number of teachers who have so far qualified each year for an Intermediate Certificate in Agriculture:

1914, 12; 1915, 10; 1916, 15; 1917, 15; 1918, 9; 1919, 21; 1920, 25; 1921, 24; 1922, 33; 1923, 20; 1924, 15.

Below are the names of those teachers who qualified in 1924.

Ashdown, C. A., B.A., McGill.
Baxter, Agnes.
Coughlin, Virginia B.
Davidson, D. M., B.A., Queen's.
Dippell, L. W., B.A., Toronto.
Facey, Gladys E.
Lindsay, Edwin H.
Mackey, M. Isabel, M.A., Toronto.
McCollum, Russell P.
Menzies, Leslie P., B.A., B.Paed., Toronto.
Runstedler, Elizabeth.
Sidey, Walter K., B.A., Toronto.
Tanton, Francis, B.A., Queen's.
Tyson, Clarence W.
Wheable, G. A., B.A., Queen's.

University Standing Summary, including Farm Mechanics and Specialists, with Degrees:

McGill	1
Queen's	94
Toronto	43
McMaster	18
Western	4
Victoria	3
	163
Without Degrees	112

The Normal Schools

Though the accommodation for teaching Agriculture in the Normal Schools is necessarily limited, excellent work is being done in preparing teachers to teach Agriculture in Public and Separate Schools. Teachers in training for First Class certificates as well as those for Second Class certificates receive regular instruction in methods, and have some practice-teaching in Agriculture.

Much of the progress in agricultural instruction in the Public and Separate Schools is quite apparently due to the efficient work done in the Normal Schools.

Better class-room accommodation for this subject is needed, in order that more individual work may be carried on.

Summer Courses

Notwithstanding the fact that each student paid his own expenses, the attendance was, taking all things into consideration, satisfactory. Formerly the living expenses were refunded.

The following table shows the attendance at the Summer Sessions in Agriculture since 1911:

Attendance at the Ontario Agricultural College Summer Courses in Agriculture

Year	Elementary				Intermediate					Inspectors	Farm Mechanics	Total
	I		II		I		II		III			
	Men	Women	Men	Women	Men	Women	Men	Women	Men	Parts I and II		
1911	8	75	1	16	....	.....	....	.....	....	.....	.....	100
1912	16	65	2	23	....	.....	....	.....	....	.....	.....	106
1913	14	64	5	36	23	4	....	.....	....	.....	.....	146
1914	8	55	5	27	13	4	14	.....	....	.....	.....	126

APPENDIX H

REPORT OF THE INSPECTOR OF PUBLIC LIBRARIES

To The Honourable G. Howard Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—

I have the honour to submit the following report of the Public Libraries Branch for the year 1924, and the statistics, etc., of the public libraries of the Province for 1923; also a statement of the grants paid in 1924 to public libraries.

General progress has marked the work of the public libraries during the year 1924. There has been a notable increase in library patronage, book-purchasing on the part of library boards, and in the number of public libraries. The Department's publications, library school, and the personal service of the staff of the Public Libraries Branch have contributed to the general improvement of library service throughout Ontario.

Summary

1. We now have 477 public libraries on the register as compared with 466 one year ago.

2. The patronage of the libraries increased about 9 per cent. in 1923 over 1922. During 1924 many libraries have reported continued increases in circulation.

3. Expenditure for books is still increasing in a marked degree. Inadequate book-expenditure was too prevalent among our libraries until quite recent years, and it is gratifying to know that boards are becoming impressed with the importance of purchasing books in sufficient numbers.

4. General expenditure shows a small increase. Public library boards with few or no exceptions have been practising strict economy in these days when policies of economy should be especially observed.

5. Three new public library buildings were opened, and provision made for the remodelling of a building presented to the city of Kingston. Port Perry, at a public meeting, decided to erect a public library building as a monument to the fallen heroes of the town.

6. Thirty-one students attended the Ontario Library School.

7. The *Ontario Library Review* was published each quarter; one number contained a complete catalogue of the Canadian books of 1923.

8. The travelling libraries are still proving popular; there is little change in demand.

9. Several rural and village libraries were given new life and were placed in good running order.

10. Grants to public libraries increased about $1,000 on the whole. With the increased expenditure on books and larger service in general, one might expect to find a larger increase in grants, but many of our libraries which showed notable improvement have been earning the maximum grant for some time, and the small increase was due entirely to a large number of small amounts earned by rural and village libraries.

11. "Adult Education in its Relation to the Public Library" began to furnish a topic for special consideration. It always was a subject of interest to public libraries, but it was never considered in a large way. Ontario is represented on a commission that is enquiring into the subject in all its bearings.

Adult Education and the Public Library

The present interest in adult education in its several forms and in its relation to teaching institutions, self-organized groups, correspondence courses, etc., has furnished the library world with a new incentive and with greater opportunities for study and for considering the possible scope of the library as an agency for promoting adult education through direct service and through co-operation with other libraries and with other institutions engaged in the education of adults and of boys and girls out of school. Some writer has said "Adult education is in the air"—there seems to be a new realization of the importance of providing educational advantages for persons who have left school. On the most superficial thought one realizes that the public library has great possibilities in promoting a form of home study.

In June of last year, the Inspector of Public Libraries, on the approval of the Minister, accepted a place as Canadian representative on a commission on adult education in its relation to the public library. The programme of the commission includes an exhaustive study of adult education and the formulation of plans and policies that libraries might follow both individually and collectively. Our library system is in no way committed to enter into co-operation with that of any other country, but experience has already proven that there is a decided advantage in uniting with librarians of the United States for purposes of this enquiry.

The commission met several times in June during the international library conference at Saratoga Springs, and two meetings were held at Chicago, one in October and one late in December. The major portion of the time was devoted to the consideration of adult education as carried on in Great Britain, Denmark, the United States and Canada. Two bulletins have been published by the commission and sent librarians, library trustees and other interested persons throughout Canada and the United States. The pamphlets deal briefly with the purposes of the movement and the work done by the principal agencies promoting adult education.

While the commission is not ready to set forth the results of its study and any part of a definite programme, it will be of interest to point out a few of the facts and ideas that have already been unfolded.

1. Great Britain and Denmark undoubtedly lead the world in providing educational opportunities for persons out of school. The United States and Canada must advance considerably before they can be favourably compared with the two countries overseas, and they have a very large but inviting problem before them of furnishing people out of school with the educational opportunities they deserve.

2. While libraries are giving good reference service, and the work with young people has been well developed, and library science has made libraries more efficient, the matter of readers' advisory service has not received sufficient attention, that is, due stress has not been placed upon advice and assistance to those who wish to follow courses of systematic study. The commission believes that libraries should give more attention to the readers' advisory feature of their work.

3. Public libraries in addition to what they are able to do with their own resources should arrange ways and means of obtaining the benefits of the work of specialists in planning special courses for systematic study.

4. Libraries should arrange a system of co-operation by which they may gain by readers' advisory work well accomplished by individual libraries and by specialists. Where a worthy course of study has been arranged for an applicant of known age and with a certain educational standing, it should be made available for the institutions that are likely to have a patron desiring similar service. If such a practice were in vogue the smaller libraries would be able to benefit by what larger libraries have accomplished.

5. Libraries should confer with teaching agencies engaged in adult education and there should be co-operation between the libraries and teaching agencies in order (1) that the libraries may assist the other agencies by supplementing their work, and (2) that teaching agencies may refer students to the library for information outside their regular courses.

6. As libraries are large purchasers of books, arrangements should be made to encourage the publication of new books on a large variety of subjects, the style to be adapted to the independent student whose educational opportunities have been altogether too limited. The libraries as a whole could guarantee the sale of a large edition of any book written for the home student. Books of this kind should be approved by a specialist in pedagogy before publication.

The work of the commission will probably continue until the summer of 1926. I am of the opinion that the work of the commission will prove to be the forerunner of a larger enquiry. The idea of the commission of librarians was the result of a meeting of several librarians and educationists held in New York at the suggestion of Dr. Keppell, of the Carnegie Corporation. It was decided that the library association should appoint a commission, and the Carnegie Corporation agreed to furnish funds to meet the expenses of the work. An experienced librarian was appointed as secretary and chief executive officer and is devoting his exclusive time to the work of the library in its relation to adult education.

It will be a matter of interest to present the section in the Public Libraries Act which shows that extensive service in adult education was considered as a probable work of the Public Libraries Branch. The Honourable Dr. Cody, Minister of Education, 1918-1919, called me into conference concerning a new Public Libraries Act, and it was decided that provision should be made for developing adult education through libraries. The session of the Legislature of 1919 closed rather abruptly, and it was necessary to hold the Act for another year, and it was finally passed in the year 1920. The section reads as follows:

"Bureau of Home Study

"81. Subject to the regulations the Minister may establish a bureau of home study for the benefit of the people of the Province, and may pay the cost thereof from any money voted by this Legislature for public libraries or for travelling libraries, and may pay for:

(*a*) The compilation of reading courses by the specialists;

(*b*) The compilation and annotation of bibliographies;

(*c*) Written lessons of instruction for study and practice."

Growing Patronage

One of the outstanding achievements of the public libraries of Ontario is that of increased patronage from year to year. The use of the libraries as a

whole has increased one hundred per cent. in the last eight years. With new attractions entering into the lives of the people from time to time, such as the moving picture and radio, one might expect to find a lessening interest in reading, but the patronage of the libraries as a whole has been increasing year after year notwithstanding the added attractions that bid for a share of the leisure time of the people. We have abundant evidence to convince us that the quality of the books read by the people is steadily improving. Library reports, accompanied as they are by duplicate invoices of the books purchased, convince us that the libraries are improving in their book selection; and the standard of librarianship, improving as it does from year to year, plays an important part in encouraging an interest in better books.

We observe that public demand for library service keeps pace with the provision made for serving the people. The larger or better service on the part of a library always meets with a response from the people. Our legislation of 1920 enables the majority of libraries to purchase books more generously than was possible four or five years ago. The larger purchases on the part of libraries was immediately followed by larger public patronage. In addition to their increased book purchasing power, the libraries were able to provide better librarian's service, which resulted in better book selection, better organization, and a stronger influence for encouraging better reading.

The outlook for the near future is encouraging. It is doubtful if our libraries will add much to their expenditure while curtailment is the watchword of municipal spending bodies, but there is considerable room for improvement in personal service, and the Public Libraries Branch intends to emphasize the importance of further developing a call for better reading.

New Buildings

Four modern library buildings were opened in 1924:

1. The town of Alliston built a modern library as a memorial to the young men of the town who fell in the European War. The funds for the erection of the building were secured by private subscription through the good work of the Women's Institute. It is a matter of special interest that Dr. Frederick G. Banting, the discoverer of insulin, whose home was Alliston, opened the door with a golden key and addressed the townspeople at the formal ceremonies.

2. The town of Norwood completed its new building, which was opened in the month of February. The building was erected from the same plan as that used at Alliston.

3. The Toronto Public Library Board opened a new building in the Roden district, to be known as the Gerrard branch.

4. A neat rural library, eighteen feet square, was built at Claude at a cost $423, $300 being raised by popular subscription.

The people of Kingston carried a by-law to raise $3,500 to remodel and equip a large building bequeathed to the city by the late G. Y. Chown. The people of Port Perry, at a public meeting, decided to erect a library building in memory of the heroes from that town who lost their lives in the war. Stevensville also has a library in the course of construction.

Publications

The Public Libraries Branch published the *Ontario Library Review* (quarterly) as usual. We find this periodical to be a great source of strength to our work, containing as it does annotated lists of approved books for purchase by

public libraries and also papers on library subjects for the enlightenment of those engaged in library work. The great influence of this publication lies in its generous distribution. A copy is sent to every library trustee and every librarian in the Province and, as a courtesy, to each university and legislative library in the other provinces of the Dominion. We are pleased to report also that a few copies have been applied for by libraries in Great Britain, Australia, New Zealand and South Africa.

It would be a fair question for one to ask why the distribution is so generous amongst the libraries of Ontario, and why one copy to each institution would not be enough. By sending a copy to every librarian and every library trustee, we find we enlist more interest on the part of all trustees and keep them interested and informed in the library movement. At one time a booklist was sent to every library and it usually got into the wrong hands. Now that all persons officially connected with libraries receive a copy there is no excuse for inferior book selection, because wise selection is encouraged by helpful suggestions. I find also that the distribution of the *Ontario Library Review* saves a considerable sum in travelling expenses on the part of your Department, as a great deal of suggestion and instruction is communicated through its pages, and the audience that is reached is much larger than a visitor could meet personally or the Inspector could instruct by means of library institutes. A special feature of the quarterly last year was a complete list of the Canadian books published in 1922-1923. Special lists of this kind have been published each year of late.

Library Work with Boys and Girls

Considerable stress has been placed on library service for boys and girls during recent years and within the last two or three years the interest has become widespread, very largely through our aggressive campaigns. The smaller libraries are now showing an interest in books for the young that is very encouraging to the Public Libraries Branch. We are pleased to report also that applicants for travelling libraries frequently make requests for approved books for boys and girls. Our libraries are performing commendable work in developing good citizenship by means of circulating good books and in holding story-hours for the younger children.

We have now in the Province sixty trained library assistants who devote their exclusive time to library work with boys and girls. The smaller centres usually follow the lead set by the cities and larger towns, and we are pleased to state that the past year has witnessed several steps forward in giving larger and better library service to the rising generation.

Training of Librarians

The training of librarians and assistants is one of the most valuable contributions that the Department makes toward library advancement in the cities and towns, and in turn, these libraries exert a good influence on the smaller libraries. It is to be hoped that before long some method of training will be devised to reach the smaller libraries that are supported by taxation. The Ontario Library School has been doing remarkably effective work when we consider that the course covers the brief period of between three and four months.

I am of the opinion that a further development of library training is somewhat past due. We are in need of a summer course for the benefit of the smallest type of libraries. It is probable that such a course may prove of special benefit to persons wanting to serve as school librarians or

qualify as teacher-librarians, as well as to those engaged in library work in small centres. In addition to our regular short course we require a more extended course of training, that, with the intensive course now given, would cover an academic year. Library training costs the Department less than $3,000 each year, and it undoubtedly pays the largest dividends of all expenditures made in the interest of libraries. I shall probably place before you a detailed report concerning training in its relation to public libraries and other libraries maintained under authority of Ontario statutes.

A very satisfactory class received instruction this year. There was little change in its character as compared with the school of last year.

Travelling Libraries

Our travelling library section shows little change. Up to the present the Department has been providing a decidedly limited service with travelling libraries. We have been able to fill every application that has been made for cases of books and we have also made a number of special loans to new libraries in rural districts and villages. No publicity has been given to this service by the Department in order to increase the patronage. Women's Institutes and a few farmers' periodicals have placed the travelling library service before the public and this has probably played an important part in keeping the demand from slipping below the point that it reached a year ago.

I would point out that the demand is practically equal to the provision the Branch is able to make with present facilities and expenditure. I have stated on former occasions that the cost would be prohibitive to attempt to give what might be called adequate service if an extensive and aggressive campaign were carried on for the purpose of reaching all the sparsely settled parts of the Province. The policy so far has been to furnish cases of books to communities that ask for them. We lose no good opportunity for encouraging the establishment of community libraries. We assume that, if a community is interested in using a travelling library quarter after quarter, there should be sufficient interest for the establishment of a small public library.

A different form of service to persons in the remotely situated parts of the Province seems to be necessary. A great many letters are received from people wishing to borrow two or three books for special purposes and they frequently ask advice concerning the best books for use. There seems to be a great need for a central library service such as this. It should prove to be a great educational influence if carried on according to modern library ideas. In promoting interest in adult education, special library service should be rendered by a central library.

Closed Libraries Reopened

No public library registered with your Department has been officially closed during the last nine years, but there were many "dead" libraries in the Province prior to 1916 and many of them are in that condition still. The Public Libraries Branch has followed the policy of visiting small libraries where failure has been feared and through assistance and encouragement has saved lives. Success has also been won in reviving several of the old, defunct libraries. Wherever prospects for the reopening of an old library seemed favourable a visit was made by an official of the Department, and in every case reorganization was effected and satisfactory library service provided. I wish to express appreciation of the excellent work of my assistant, Mr. S. B. Herbert, for what he

has accomplished in visiting many of the smaller centres for the purpose of arranging for the reorganization of closed libraries. He has shown considerable skill in dealing with the people and has always succeeded in arousing an interest that moved the leaders in the community to sign the necessary reorganization papers.

Acknowledgment of Assistance

I wish once more to express appreciation for the co-operation of Dr. George H. Locke and the Board of the Toronto Public Library and several members of the staff of that excellent institution. For the ninth consecutive year the Toronto Public Library has assisted the Department in its professional training school, and several other services have been rendered in the interest of the public libraries of the Province.

Statistics

I present, on pages 283–291, a statement of the statistics of the Public Libraries of the Province.

I have the honour to be,

Sir,

Your obedient servant,

W. O. Carson,
Inspector of Public Libraries.

Toronto, March 5th, 1925.

APPENDIX I

REPORT OF THE INSPECTOR OF AUXILIARY CLASSES

To The Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—

I have the honour to submit for your consideration the following report on Auxiliary Classes.

I have the honour to be, Sir,

Your obedient servant,

Toronto, December 31st, 1924. S. B. Sinclair.

Auxiliary Classes are for children who are "capable of mental development beyond that of a child of normal mentality of eight years of age, but who are from any physical or mental cause unable to take proper advantage of the ordinary public or separate school courses."

There are in Ontario 110 Auxiliary Classes conforming to regulation requirement, not including 13 adolescent Auxiliary Vocational Classes—an increase of 21 classes during the year.

They are distributed as follows: Lip-Reading, 2; Myopia, 3; Ambulance, 5; Open Air and Forest, 8; Hospital, 3; Sanitarium, 2; Institutional, 3; Training and Vocational Classes, 97. The Training Classes outside Toronto are located as follows: Belleville, 1; Brockville, 1; Guelph, 2; Hamilton, 8; Kitchener, 2; London, 5; Midland, 1; Ottawa, 2; Oshawa, 1; Owen Sound, 1; Peterborough, 1; St. Catharines, 2; Stratford, 1; Windsor, 6; Walkerville, 1; Welland, 1; York County, 2. In Toronto there are 46 Training and 13 Vocational Classes.

In response to a request from a school board or school boards the department conducts a free confidential survey, with the assistance of the local staff. During the year a Myopia Class survey was made in London, and Training Class Surveys were made in Chatham, Fairbank, Hamilton, Galt, Kitchener, Midland, Niagara Falls, Oshawa, St. Catharines, Welland, New Toronto and S.S. Nos. 32 and 33 York County.

Subnormal children constitute the most serious and difficult Auxiliary Class problem.

The following is descriptive of the 11 most backward children found in a recent survey of a school of about 700 pupils, in Ontario:—

Pupils' Age		Mentality	Present School Grade	Time at School		Years of School Work Done
Yrs.	Mos.			Yrs.	Mos.	
8	11	53%	Primer	3	11	.53
12	..	54%	First	6	..	.54
13	8	55%	Jr. Second	8	8	1.65
11	9	55%	Primer	2	9	.55
14	2	61%	Jr. Second	8	..	1.81
10	6	64%	Primer	5	6	.64
12	7	66%	Jr. Second	7	7	1.98
12	7	67%	Jr. Second	6	3	2.01
7	3	73%	Primer	2	..	.73
9	1	75%	Primer	4	..	.75
8	8	75%	First	3	..	1.5
			Total.....	57	8	12.69

An examination of the foregoing table shows that none of the pupils are below 50 per cent. mentality, i.e., they are not less than half-witted, are neither idiots nor imbeciles, are not feeble-minded in the usually accepted meaning of the term, and are not cases to be sent to an institution. On the other hand they are all below 76 per cent. mentality, i.e., they are not more than three-quarters witted. Comparing their present grade with the number of years they have spent at school and considering the amount of work they have done, it is obvious that they are too subnormal to keep the pace of an ordinary class. They have taken a total of fifty-seven school years to do what a normal child would have accomplished in twelve years. In a training class with work suited to their needs they would not have gone as rapidly as an ordinary child, but they would have gone at a natural pace and would have covered thirty-six years' work instead of twelve. Waste Time Is Costly.

If these subnormal pupils continue to mark time in an ordinary class until sixteen years of age, they will become a burden if not a menace to society. If placed in an auxiliary class they will become happy and useful citizens, able and willing, under supervision, to perform any kind of unskilled labour.

In such surveys the local school staff select from about 1,000 children 35 of the most backward, and specialists from the Department examine those selected and recommend the 16 most eligible for the Auxiliary Class. The specialist examinations have been conducted mainly by Miss H. DeLaporte, B.A., Assistant Auxiliary Class Inspector, and Dr. Phair, Chief School Medical Officer.

A comparison of estimates of mental age made by Ontario teachers of 400 subnormal children showed that without giving an intelligence examination, with a few hours' preparation, teachers can learn how (after a few weeks' study of the child and private consultation with previous teacher, nurse, parent, etc.) to estimate mental age within five per cent. of the results obtained from a formal standardized intelligence test. The investigation also demonstrated the necessity of having all training class children given an intelligence examination in order to correct or reinforce the teachers' appraisement.

The brief necessary preparation for such selection by the teacher can be given at normal schools and teachers' institutes. The Auxiliary Class Act provides that admission to Auxiliary Classes shall be by a board consisting of the principal of the school, the local inspector and a medical officer appointed for the purpose. Last summer, sixty-two teachers attended the Toronto Summer School for the training of auxiliary class teachers and received certificates, making a total of 250 teachers trained during the past five years. All these auxiliary class teachers have taken a practical training in intelligence testing. In the case of very backward children of between 50 and 75 I.Q., when the class is once established, it is therefore possible for the local authorities to continue the class as an organic part of the school system with but little assistance from the Department. It would be an advantage if the inspectors could be given the brief course which they have requested.

In 1924, section 6 of The Vocational Education Act of 1921 was amended by the addition of subsection 5, which provides that: "Subject to the regulations, pupils of thirteen years of age and over, who have been in attendance in auxiliary training classes, or who are eligible for admission to such classes, may, with the approval of the Minister and upon an examination conducted subject to his direction, be admitted to special industrial classes established by a board for the purpose of giving vocational instruction to such pupils where it is found

that they may be benefited by it." Under this amendment the Advisory Industrial Committee of the Toronto Board of Education have established a school for adolescent subnormal children over thirteen years of age, with thirteen classes containing about 150 boys and 150 girls. A portion of the time is devoted to academic studies and physical culture, and in both schools pupils spend at least half their time in purely vocational activities. The girls take sewing, cooking, laundry work, etc; the boys, wood work, metal work, etc. The building and grounds are admirably adapted to the purpose for which they have been set apart, the equipment is up to date and an effort has been made to secure and retain teachers who are well prepared, enthusiastic and successful.

The boys and girls are segregated, live at their own homes, are not a burden on the state and are not institutionalized or stigmatized in any way. They are learning how to earn or assist in earning their own living by doing the work for which they are naturally best fitted. Better still, they are forming correct habits of conduct and are learning to enjoy work. The results have proved sufficiently satisfactory to warrant the statement that the passing of this legislation was the most valuable and progressive step in the treatment of subnormal children taken in recent years. There will no doubt be a small fraction of these children who will prove so unstable or will have such unsatisfactory home conditions as to render the formation of correct social habits of self-control practically impossible even under such favourable conditions, and who will eventually prove to be institutional cases.

The children in these auxiliary vocational classes will, with but very few exceptions, never be able to attain to even the lowest standard of excellence of the skilled achievement of either high or technical school pupils, but their placement in the vocational school panel is justified on many grounds. If they are not to become social derelicts, it is necessary that they be given a training which will enable them as far as possible to earn a livelihood as happy, industrious and law-abiding citizens, and, therefore, every activity of the school, academic or sensory motor, should be truly vocational. It is also of great value in the planning and conduct of this work to have the advice of vocational school experts. Further, the education of these children is in a very special sense a concern of the state authorities, both provincial and dominion.

The auxiliary class teachers of Toronto and several other places hold monthly meetings for study, and in October gained valuable assistance from a visit to Buffalo, where they were given every opportunity to see the work of the special classes. The Ontario auxiliary class teachers have made an important contribution in the publication of *The Bulletin*, of which there have been three issues during the year. The rapid advance in recent years in the establishment in Ontario of satisfactory classes for very backward children has produced results which if given in detail would furnish convincing proof of the desirability of and necessity for the formation of such classes everywhere. The gifted child of high I.Q. in the old-time rural school, by listening in on higher classes and under the fluid conditions of transfer, could be promoted whenever he was ready without waiting for the subnormal children. The formation of auxiliary training classes similarly aids the gifted child by removing the subnormal hold-back. A number of Ontario schools have, with satisfactory results, adopted the system of class grading into gifted, normal and backward classes. A number of cities outside Canada have established small classes of highly gifted children for the purpose of training for political, social and economic leadership. With a gifted teacher and a carefully considered course of study, such classes are capable of unusual achievement.

The greatest obstacle to the establishment of auxiliary classes of all kinds, is the cost and difficulty of transportation. Speaking generally, in an area of 6,000 population with 1,000 children we would find only about sixteen children so subnormal that they should be placed in a training class; two children with visual defect sufficient to require a sight-saving class, and one child with locomotion so disorganized as to be unable to walk to a near-by school.

If the population is sufficiently congested that a class of any of these types can be formed at the centre of the area, where none of the pupils (except crippled children) will require to walk more than a mile to school, the cost of the special class is but little if any more than that of leaving children in the ordinary grade, and when properly understood and conducted all difficulties such as objections by parents quickly disappear.

Where practicable, classes should be consolidated to admit of grading and segregation of sexes when necessary. In a large city adolescent subnormals over thirteen years of age are able to come to a central vocational school, and in densely populated areas elementary subnormals may have two graded classes in one school. A good expedient is to have as guide to the subnormal a normal child who is transferred to a near-by school. Street-car fares may be paid by the school board in extreme cases. Towns of less than 6,000 may form a class containing pupils from the surrounding rural area. Many children with locomotor disability can, with the help of a strong assistant, walk to a near-by school.

When we consider that in a rural inspectorate of 30,000 population with 5,000 children there would probably not be more than five children who would be so crippled as to be unable to walk to school, we see why it is that large cities have been the first to establish special classes and why it is sometimes necessary to have the child reside away from home during school days. Even in the largest cities, e.g., New York, the transportation of crippled children to school presents a serious financial problem. In Ontario during the past year a number of associations have attacked the problem of rendering practical assistance to the handicapped child. In no other field is such assistance so necessary or so practicable as in the furnishing of transportation facilities by which the auxiliary class child may be taken to school. With such valuable assistance, there is reason to hope that not only the crippled child in the city, but the handicapped child in the sparsely settled rural district, who is just as deserving of assistance, may have the priceless privilege of adequate educational facilities.

APPENDIX J

REPORT OF THE PROVINCIAL SCHOOL ATTENDANCE OFFICER

To The Honourable G. Howard Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—

I have the honour to submit herewith my annual report on School Attendance.

I have the honour to be,
Sir,
Your obedient servant,
J. P. Cowles,
Provincial School Attendance Officer.

Toronto, December 31st, 1924.

Improved Attendance

The Municipal Statistics gave the population of Ontario in 1918 as 2,579,177, and in 1923 as 2,817,890. The increase is 9.25 per cent. In 1918 the total enrolment in the elementary schools of the province was 528,917; in 1923 it was 610,322. The increase is 15.39 per cent. In 1918 the enrolment in the Fourth Book classes (Grades VII and VIII) was 92,156; in 1923 it was 128,331. The increase is 39.25 per cent. In 1917 (see note below) the average daily attendance was 342,571; in 1923 it was 425,480. The increase is 24 per cent. That is, while the population of the province increased 9.25 per cent., the total enrolment increased 15.39 per cent., the enrolment in the Fourth Book classes 39.25 per cent., and the average daily attendance 24 per cent.

The enrolment in the secondary schools shows a greater change. In the school year 1918-19 the enrolment in all secondary schools was 40,477; in 1923-24, it rose to 66,784, an increase of 64.99 per cent. in five years.*

All the evidence available shows that the greatest factor in producing the remarkable increase is the enforcement of The School Attendance Act and The Adolescent School Attendance Act. For, while neither law has been administered with severity, the fact that such laws exist has caused parents to insist upon their children attending school more regularly and remaining in attendance to a greater age.

The 1923 Amendment

The statement is sometimes heard that The Adolescent School Attendance Act made no difference in rural districts. The following is submitted: In the County of Norfolk in 1921, before the Act became operative, the number of adolescents fourteen and fifteen years of age attending the rural elementary

*Note:—In this case the 1917 figures are used because in 1918 there was a decrease of over 40,000 in the average daily attendance, owing to the "Influenza" epidemic.

schools was 242. The next year, that in which the Act did operate, the number rose to 508. The next year after the amendment was passed by which farmers' children required at home were excused without formal home permits, the number fell to 411. In Lincoln, after the Act became operative the number was 433; after the amendment it fell to 408. In Lambton West after the Act the number was 436; after the amendment it fell to 234. In Simcoe East after the Act 402 attended, after the amendment, 352. In Haldimand after the Act 340 attended, after the amendment, 273. In Northumberland and Durham No. 1 after the Act the number was 247, and after the amendment, 213. In the six inspectorates mentioned, and these may be regarded as fairly representative, the number of adolescents attending the rural elementary schools fell from 2,366, while the original Act operated, to 1891 after the amendment became effective.

Enforcement

With the exception noted in connection with the compulsory attendance of adolescents of farmers, there has been practically no opposition to the enforcement of the full time provisions of The Adolescent School Attendance Act. Indeed, there has been most gratifying co-operation from school authorities and others interested in the welfare of the young. The fact that the Act came into operation gradually helped greatly but the development of our provincial system, through changes made in laws and regulations, really prepared and paved the way for the smooth enforcement of the law.

The following references will illustrate the development of the school system:

1. The growth and development of means for Industrial, Technical and Art education.

For the pupil who plans to enter into some industrial occupation the ordinary academic course of our school system provided little which he or his parents recognized as bearing directly or adequately on his future. Vocational schools provided an incentive to such a one to continue at school. By the Minister's Report of 1921 it is shown that in twelve industrial centres vocational day schools, employing 177 teachers, had already been established. The schools have since increased so that now twenty-six centres are providing day industrial classes, and 288 full-time and 49 part-time teachers are employed.

2. The formation of Advisory Committees, whereby the schools providing vocational training were more closely linked up with employees and employers.

By the provisions of The Industrial Education Act, the forerunner of the present Vocational Education Act, vocational schools were to be under the management and control of committees composed of eight or twelve persons, one-half made up of elected members of the school boards and one-half co-opted representatives of industry, chosen equally from employers and employees. This action widens interest and ensures a consideration of a question from various angles.

3. The enactment as a permissive-mandatory Adolescent School Attendance Act in 1912, with revision in 1916.

While these Statutes were not acted upon, they served to direct the attention of the public and of industry to the necessity for the education of the adolescent.

4. The passing of The School Attendance Act, by which there must be formed in every municipality organized means of providing against non-attendance and irregularity in attendance at school.

5. An amendment to The Factories Act, by which it became illegal under The Factories Act to employ any young person in contravention of the school laws.

This amendment permitted the helpful co-operation of factory inspectors with school attendance officers.

6. An amendment to The Mothers' Allowances Act, by which allowances may be paid to widows on behalf of children from 14 to 16 years of age who attend school.

7. An amendment to the Acts relating to secondary schools whereby fees may no longer be collected from pupils attending schools which they have the right to attend.

The entire expenditure in connection with both elementary and secondary education is now met out of public funds. A full school course ending in full honour matriculation or the equivalent may now be covered entirely free to the pupil concerned.

Part-Time Provisions

The part-time provisions of The Adolescent School Attendance Act are compulsory only in urban municipalities having a population of five thousand or more. A survey of such municipalities was made in 1922, after the second stage of the Act became operative. It was discovered that in the greater number of these municipalities all, or nearly all, fourteen and fifteen-year-old young persons were actually attending school, academic or vocational, full time. For example, in Collingwood, with a population of 6,237, only three adolescents were exempted on home permits or employment certificates, and in Barrie, with a population of 6,888, only five were exempted.

In his last report the Inspector of Public Schools of the city of Windsor says:

"The Adolescent Act makes it obligatory for school boards in municipalities with a population of over 5,000 to provide part-time classes for those pupils absent from school on work permits. Judging from press reports, many Ontario cities are finding this a difficult thing to accomplish. I am pleased to inform you that it will not be necessary at present to establish any part-time classes in connection with the Public Schools of Windsor. Mr. Howe has issued only twenty-one permits to pupils under sixteen in connection with the public schools. These permits have been issued with the understanding that the pupil is to return to full-time classes after Christmas. I am sure very few cities of Ontario are in the enviable position we are in this respect. The establishment of The Adolescent Classes has entirely met the situation as it affects the public schools."

The Inspector of Public Schools of the city of Kingston says:

"The Adolescent School Attendance Act is being enforced very thoroughly as far as compelling attendance is concerned. The total number of those exempt from attendance under 'employment' or 'home' permits is comparatively small. After going over with me the cases of those absent under permit, it was admitted that the establishment of part-time classes was not a matter of practical importance in Kingston."

In fourteen of the smaller towns and cities of the province affected by the part-time provisions of the Act, having a total population of 107,239, only 206 adolescents under sixteen were exempted, or one in every 521 persons.

APPENDIX K

REPORT OF THE DIRECTOR OF PROFESSIONAL TRAINING

To the Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—

I have the honour to submit for your consideration the following report of the Provincial Schools for the professional training of teachers for the year 1924.

Notwithstanding the very large attendance at the various training schools reported for 1923, there has been a further increase for the present session. It is a matter of congratulation to note that this increase is more than accounted for by the increase in the enrolment of candidates for the higher certificates. In the High School Assistants' course the enrolment has increased by twenty-eight and in the First Class course by 150. The enrolment in the Second Class course has, on the other hand, decreased by 120. It is also pleasing to note that there has been an increase of seventy-eight over the previous year in the number of male students seeking to qualify as teachers, the number at the College of Education having increased from 106 to 128 and at the Provincial Normal Schools from 348 to 404. Of these male students forty-seven saw service in the Great War.

The tables given below show in detail the attendance in the various courses at the different training schools.

The College of Education

The registration of teachers-in-training in the various courses is as follows:

The Household Science Course	14
The High School Assistants' Course	302
The Specialists' Courses	124
The First Class Public School Course	52
The Elementary Art Course	35
The Elementary Physical Culture Course	195
The Courses for Degrees in Pedagogy	140

The teachers-in-training in the High School Assistants' course may be classified according to their university degrees as follows:

Degree in Arts	261
Degree in Science	10
Degree in Applied Science	13
Degree in Scientific Agriculture	15
Degree in Philosophy	1
Degree in Commerce	1
Degree in Literature	1

It is interesting to note that of these degrees, five were conferred by universities in the British Isles, three by those in the Maritime Provinces, six by those in Quebec, seven by those in the Western Provinces, two by those in the United States, and one by an Italian university.

The graduate courses for the degrees in Pedagogy continue to attract experienced teachers from all parts of Canada. During the past year the following degrees were obtained by students in Pedagogy:

Bachelor of Pedagogy	20
Doctor of Pedagogy	3

The registration in the various Specialist courses is as follows:

Classics	6
English and French	9
English and History	36
French and German	8
French and Spanish	12
Household Science	12
Mathematics and Physics	15
Science	14
Science and Agriculture	12

The ratio of the number of Specialists to the number of High School Assistants remains almost stationary. It may be noted, however, that the Specialists in Science, Household Science and Agriculture increase in numbers, while those in Classics decrease. A scarcity of Specialists in Classics seems inevitable.

The additional buildings and equipment of the College of Education are now in full use. With the increased attendance in both the College and the University Schools, the accommodations, old and new, are utilized to the limit. There is yet need of addition to the playgrounds.

The Provincial Normal Schools

The following table gives in detail the attendance in the various courses at the Provincial Normal Schools in 1924–1925:

School	Total Attendance	Male	Female	First Class	Second Class	Kindergarten-Primary
Hamilton	289	48	241	59	230	..
London	399	63	336	153	246	..
North Bay	292	50	242	...	292	..
Ottawa	348	49	296	65	283	..
Peterborough	233	32	201	...	233	..
Stratford	220	35	185	...	220	..
Toronto	671	127	501	277	351	43
Totals	2,452	404	2,002	554	1,855	43

The following changes have been made in the staffs of the Normal Schools during the year:

Mr. K. Oswald Birkin appointed an assistant at the Ottawa Normal Model School in place of Mr. A. W. McGuire, B.A., resigned.

Mr. Orville E. Ault, B.A., appointed an assistant at the Ottawa Normal Model School in place of Mr. W. C. McKendry, B.A., resigned.

Miss F. Luella Barrigar appointed instructor in Physical Culture at the Ottawa Normal School.

Mr. Edward H. McKone, B.A., appointed a master at the London Normal School.

Miss M. G. N. Irving, B.A., appointed temporarily to the staff of the Hamilton Normal School.

Miss Mildred Hallett, M.A., appointed temporarily to the staff of the Ottawa Normal School.

Lists of the staffs of the Normal and Normal Model Schools are given in the register of Schools and Teachers for the Province of Ontario.

Model Schools

The following tables show the number of students who attended the Model Schools to train for District and Third Class certificates:

Summer Model Schools

School	District	Third Class	Academic	Total
Bracebridge	28	61	19	108
Gore Bay	13	30	1	44
Madoc	53	..	..	53
Port Arthur	11	11	13	35
Sharbot Lake	4	59	22	85
Totals	109	161	55	325

Autumn Model Schools

School	Third Class
Cornwall	5
Kingston	32
Orillia	16
Renfrew	24
Total	77

Kindergarten-Primary Summer Course

In addition to the forty-three students in training at the Toronto Normal School for the Kindergarten-Primary certificate, 225 Public School teachers attended the Summar Courses of 1924 to qualify for the certificate, as follows:

School	Part I	Part II	Total
Hamilton	39	18	57
London	24	15	39
Ottawa	16	8	24
Toronto	73	32	105
Totals	152	73	225

All of which is respectfully submitted,

S. A. Morgan,
Director of Professional Training.

Toronto, December 31, 1924.

APPENDIX L

SUMMARY OF STATISTICS OF ELEMENTARY AND SECONDARY SCHOOLS

I.—ELEMENTARY SCHOOLS

a. Public Schools

Number of Public Schools in 1923		6,334
Increase for the year	45	
Number of enrolled pupils of all ages in the Public Schools during the year (exclusive of Continuation and Night School pupils)		519,271
Increase for the year	6,332	
Average daily attendance of pupils		360,983
Increase for the year	862	
Percentage of aggregate to possible aggregate attendance, i.e., percentage of actual to possible attendance		88.38
Increase for the year	1.25	
Number of persons employed as teachers in the Public Schools, men, 1,716; women, 11,534; total		13,250
Increase for the year	336	
Number of teachers who attended Normal School		11,022
Increase for the year	593	
Number of teachers who attended Normal College or Faculty or College of Education		1,036
Number of teachers with a University degree		150
Average annual salary for male teachers		$1,661
Increase for the year	$17	
Average annual salary for female teachers		$1,133
Increase for the year	$16	
Average experience of male teachers		12.1 years
Average experience of female teachers		8.2 years
Amount expended for teachers' salaries		$16,008,524
Amount expended for public school houses (sites and buildings)		$6,448,541
Amount expended for all other purposes		$9,099,157
Total amount expended for Public Schools		$31,556,222
Increase for the year	$3,294,057	
Cost per pupil (enrolled attendance)		$60.77
Increase for the year	$5.68	

b. Roman Catholic Separate Schools

Number of Roman Catholic Separate Schools in 1923		688
Increase for the year	32	
Number of enrolled pupils for all ages		91,051
Increase for the year	2.505	
Average daily attendance of pupils		64,497
Decrease for the year	400	
Percentage of aggregate to possible aggregate attendance, i.e., percentage of actual to possible attendance		84.67
Number of teachers		2,053
Increase for the year	95	
Amount expended for teachers' salaries		$1,526,180
Amount expended for school houses (sites and buildings)		$1,048,968
Amount expended for all other purposes		$1,726,985
Total amount expended on R. C. Separate Schools		$4,302,133
Increase for the year	$643,414	
Cost per pupil (enrolled attendance)		$47.25
Increase for the year	$5.93	

c. Protestant Separate Schools

Number of Protestant Separate Schools (included with Public Schools, a), in 1923		5
Number of enrolled pupils		461
Increase for the year	18	
Average daily attendance of pupils		323
Increase for the year	7	

d. Night Elementary Schools

Number of Night Schools in 1923-24		22
Increase for the year	1	
Number of pupils enrolled		2,093
Decrease for the year	170	
Number of teachers engaged		57
Decrease for the year	2	

II.—SECONDARY SCHOOLS

a. High Schools and Collegiate Institutes

Number of High Schools (including 50 Collegiate Institutes), 1923-24		183
Increase for the year	8	
Number of pupils enrolled in High Schools		48,263
Increase for the year	3,632	
Average daily attendance of pupils		41,526
Increase for the year	3,705	
Percentage of average attendance to total enrolment		86.04
Increase for the year	1.30	
Number of teachers in High Schools		1,543
Increase for the year	123	
Average annual salary, Principals		$2,946
Increase for the year	$110	
Average annual salary, Assistants		$2,248
Increase for the year	$66	
Average annual salary, all Teachers		$2,330
Increase for the year	$68	
Highest salary paid		$5,000
Amount expended for teachers' salaries, 1923		$3,392,901
Amount expended for school houses (sites and buildings)		$2,260,346
Amount expended for all other purposes		$1,596,342
Total amount expended on High Schools, 1923		$7,249,589
Increase for the year	$506,713	
Cost per pupil, enrolled attendance		$150.21
Decrease for the year	$0.87	

b. Continuation Schools

Number of Continuation Schools, 1923-24		189
Increase for the year	8	
Number of pupils in attendance		9,337
Increase for the year	560	
Average daily attendance of pupils		7,853
Increase for the year	619	
Percentage of average attendance to total enrolment		84.11
Increase for the year	1.69	
Number of teachers		350
Increase for the year	27	
Average annual salary, Principals		$1,797
Increase for the year	$43	
Average annual salary, Assistants		$1,436
Increase for the year	$26	
Highest salary paid		$3,300
Increase for the year	$100	
Amount expended on teachers' salaries, 1923		$533,395
Amount expended for school houses (sites and buildings)		$192,796
Amount expended for all other purposes		$243,292
Total amount expended on Continuation Schools, 1923		$969,483
Increase for the year	$88,052	
Cost per pupil, enrolled attendance		$103.83
Increase for the year	$3.41	

c. Night High Schools

Number of Night High Schools in 1923-24		16
Increase for the year	7	
Number of pupils enrolled		2,764
Increase for the year	1,055	
Number of teachers engaged		119
Increase for the year	37	

d. Vocational Schools

Number of Day Vocational Schools, 1923-24		24
Increase for the year	8	
Number of full time pupils enrolled		9,184
Increase for the year	2,197	
Average daily attendance of full time pupils		7,209
Increase for the year	1,691	
Number of part time pupils in Day Schools		1,837
Increase for the year	849	
Number of special pupils in Day Schools		1,798
Increase for the year	371	
Number of full time teachers engaged in Day Schools		371
Increase for the year	85	
Number of part time or occasional teachers engaged in Day Schools		88
Increase for the year	37	
Number of Evening Vocational Schools, 1923-24		60
Increase for the year	9	
Number of pupils enrolled		36,452
Increase for the year	2,941	
Number of teachers engaged		1,193
Increase for the year	96	
Amount expended on teachers' salaries, day and evening schools, 1923		$1,022,377
Amount expended on school houses (sites and buildings)		$2,006,419
Amount expended for all other purposes		$928,341
Total amount expended on Day and Evening Vocational Schools, 1923		$3,957,137
Increase for the year	$2,085,523	

III.—GENERAL

Elementary and Secondary Schools

Pupils enrolled in Elementary Schools, 1923		610,322
Pupils enrolled in Night Elementary Schools, 1923-24		2,093
Pupils enrolled in Secondary Schools, 1923-24		70,419
Pupils enrolled in Night High Schools, 1923-24		2,764
Pupils enrolled in Evening Vocational Schools, 1923-24		36,452
Total Enrolment, all schools		722,050
Increase for the year	20,272	
Percentage of total population enrolled		23.9
Total expenditure		$48,034,564
Increase for the year	$6,617,760	

Average cost per pupil (enrolled attendance) in all Schools

	1902	1907	1912	1917	1922	1923
Teachers' salaries	$7 63	$10 44	$14 26	$17 97	$29 80	$31 14
Sites and buildings	0 97	2 86	5 90	4 05	13 72	16 56
All other expenses	2 80	4 40	5 34	7 72	15 49	18 82
For all purposes	11 40	17 70	25 50	29 74	59 01	66 52

Comparative School Statistics, 1867-1923

I. PUBLIC AND SEPARATE SCHOOLS

These elementary school tables, 1, 2, 3, 4 and 5, for the purpose of comparison with previous years in which the Separate Schools were included with Public Schools, include Roman Catholic and Protestant Separate Schools. The tables A, B, C, D, and E give the statistics of the Public Schools, including Protestant Separate Schools; the statistics of the R. C. Separate Schools are given in Tables F and G; those of the Protestant Separate Schools appear in Table T; and the Night Schools in Table U.

1. School Attendance

Year	Total Number of Enrolled Pupils	Boys	Girls	Average Daily Attendance	Percentage of Average Attendance to Total Number Enrolled	Percentage of Aggregate to Possible Aggregate, i.e., Percentage of Actual to Possible Attendance
1867	401,643	213,019	188,624	163,974	40.82	.....
1872	454,662	238,848	215,814	188.701	41.50	.....
1877	490,860	261,070	229,790	217,184	44.25	.....
1882	471,512	246,966	224,546	214,176	45.42	.....
1887	493,212	259,083	234,129	245,152	49.71	.....
1892	485,670	253,091	232,579	253,830	52.26	.....
1897	482,777	251,677	231,100	273,544	56.66	.....
1902	454,088	232,880	221,208	261,480	57.58	.....
1907	448,218	229,794	218,424	266,503	59.45	.....
1912	467,022	239,187	227,835	291,210	62.35	.....
1917	527,664	266,255	261,409	342,571	64.92	.....
1922	601,485	306,225	295,260	425,018	70.66	86.80
1923	610,322	310,964	299,358	425,480	69.71	87.80

In all these elementary schools the total possible aggregate attendance for the year 1923 was 94,291,454, and the actual aggregate was 82,793,984, or 87.8 per cent. of the possible. In arriving at the possible aggregate, no deductions are made for illness, and all the school days for the year of a pupil once enrolled as well as all the school days of a child of compulsory school age (unless exempted by law) are counted, so long as they are residents of the school section, or until entered in a secondary school. Moreover, duplications of enrolment in the elementary schools owing to removals from one school section to another during the year, and as between elementary and secondary schools, do not enter into this calculation; neither does the fact that a pupil once on the roll (if only for a few days) is counted in the enrolment of the year; all of which enlarges the enrolment and keeps the percentage of average attendance to total enrolment low—69.71 for 1923. The percentage of actual to possible aggregate attendance (87.8), as given above, represents the true situation as to the regularity of the attendance in our elementary schools.

2. Classification of Pupils

Year	Kindergarten	Kindergarten-Primary	1st Reader, Part I, or Primer	1st Reader, Part II, or 1st Book	2nd Book	3rd Book	4th Book	5th Book, or Beyond 4th Book
1867	.....	.....	.....	* 79,365	98,184	83,211	68,896	71,987
1872	.....	.....	.....	*160,828	100,245	96,481	67,440	29,668
1877	.....	.....	.....	*153,630	108,678	135,824	72,871	19,857
1882	.....	.....	.....	*165,834	106,229	117,352	71,740	10,357
1887	.....	.....	115,657	76,704	100,533	108,096	81,984	10,238
1892	.....	.....	114,932	73,015	96,074	99,345	88,934	13,370
1897	.....	.....	110,567	70,808	91,330	99,682	89,314	21,076
1902	.....	.....	107,441	69,062	85,732	90,630	83,738	17,485
1907	.....	.....	112,552	60,194	84,622	89,371	85,752	15,727
1912	.....	.....	126,100	67,368	92,728	88,811	85,213	†6,802
1917	16,515	2,793	125,321	73,996	106,034	105,062	91,989	†5,954
1922	13,233	12,057	121,634	82,047	112,409	127,831	123,214	†9,060
1923	13,603	11,075	117,784	81,356	114,300	134,135	128,331	†9,738

NOTE.—Kindergarten attendance is not included for the years previous to 1917.
*In 1st Reader. †Exclusive of Continuation School Pupils.

The following table classifies the pupils in the various forms as to rural and urban schools:

Rural Schools

Year	Kindergarten	Kindergarten-Primary	First Reader Part I or Primer	First Reader Part II or First Book	Second Book	Third Book	Fourth Book	Fifth Book or Beyond Fourth Book	Totals
1904	.....	.....	60,784	36,941	47,930	50,297	47,289	9,892	253,133
1907	.....	.....	60,470	31,538	46,219	48,247	46,815	8,958	242,247
1912	.....	.....	62,712	30,293	43,775	42,450	44,049	†3,984	227,263
1917	75		58,290	30,657	44,407	43,834	41,321	†2,926	221,510
1922	2,511		56,217	32,701	45,621	49,657	49,976	†4,403	241,086
1923	2,375		54,831	32,318	45,528	50,706	51,135	†4,783	241,676

Urban Schools (cities, towns and incorporated villages.)

1904	.....	.....	44,456	27,800	37,299	39,814	35,815	6,304	191,488
1907	.....	.....	52,082	28,656	38,403	41,124	38,937	6,769	205,971
1912	.....	.....	63,388	37,075	48,953	46,361	41,164	†2,818	239,759
1917	16,515	2,718	67,031	43,339	61,627	61,228	50,668	†3,028	306,154
1922	13,233	9,546	65,417	49,346	66,788	78,174	73 238	†4,657	360.399
1923	13,603	8,700	62,953	49,038	68,772	83,429	77,196	†4,955	368,646

†Exclusive of Continuation School Pupils.

The following table compares the enrolment and gives the percentages from rural and urban municipalities for several years:

Year	Enrolment in Rural Schools	Enrolment in Urban Schools
1903	260,617 or 57.88% of total	189,661 or 42.12% of total
1907	242,247 or 54.05% "	205,971 or 45.95% "
1912	227,263 or 48.66% "	239,759 or 51.33% "
1917	221,510 or 41.97% "	306,154 or 58.02% "
1922	241,086 or 40.08% "	360,399 or 59.91% "
1923	241,676 or 39.59% "	368,646 or 60.40% "

NOTE.—Kindergarten attendance for years previous to 1916 not available for the above tables.

3. Teachers' Certificates, Etc.

Year	No. of Teachers	Male	Female	1st Class Certificates	2nd Class	3rd Class	Kindergarten-Primary	Kindergarten	Manual Training	Househ'd Science	District	Permanent Ungraded	Other Certificates including Temp.	No. who attended Normal School,	Nor. Coll., F. of E. or College of Education

†Exclusive of Continuation School Teachers.

The men engaged in teaching in these schools in 1923 formed 12.03 per cent. of the whole number. In 1922 they formed 11.69 per cent.

The number of teachers and the class of certificates, in the Public Schools alone, in each County and District of the Province, will be found in Table C of this Appendix.

The following table classifies the teachers and certificates as to rural and urban schools:

	Teachers			Certificates		
	Total	Male	Female	1st Class	2nd Class	3rd Class
Rural Schools, 1904	5,974	1,469	4,505	152	1,944	3,107
Rural Schools, 1907	6,038	1,201	4,837	180	1,542	3,079
*Rural Schools, 1912	6,143	894	5,249	165	3,002	1,463
*Rural Schools, 1917	6,455	655	5,800	343	4,232	1,129
*Rural Schools, 1922	7,034	777	6,257	257	5,180	909
*Rural Schools, 1923	7,159	815	6,344	305	5,417	878
Urban (cities, towns and incorporated villages) Schools, 1904	3,580	606	2,974	483	2,248	289
Urban, 1907	4,132	582	3,550	535	2,345	373
*Urban, 1912	4,985	617	4,368	509	3,417	341
*Urban, 1917	6,307	662	5,645	763	4,552	188
*Urban, 1922	7,838	963	6,875	1,016	5,645	281
*Urban, 1923	8,144	1,027	7,117	1,030	5,948	188

In the rural schools in 1923 the men formed 11.38 per cent., and in the urban schools, 12.61 per cent. of the number of teachers employed in each case.

*Exclusive of Continuation School Teachers.

* Incorporated villages included from 1867 to 1902 inclusive.

Increases in salaries in the cities, towns, villages and rural schools are shown in the above table. In Table C the average salaries for 1923 of the Public School teachers of the various Counties and Districts are given separately, and summarized for the cities, towns and villages. This table also states the salaries paid to teachers according to the grade of certificate held, and illustrates to what extent the teacher with the higher certificate commands the higher salary. The only decreases shown are for teachers with third class certificates. The average salaries for the Province are as follows:

	Male				Female			
	1912	1917	1922	1923	1912	1917	1922	1923
First Class Certificates.....	$1,340	$1,548	$2,290	$2,311	$634	$728	$1,226	$1,237
Second Class Certificates...	757	916	1,434	1,452	587	673	1,137	1,147
Third Class and District Certificates.....	524	562	911	897	458	507	855	847

Teachers' Experience

The length of service or experience of the teachers engaged in the Public Schools is also shown in Table C, where the numbers who have taught from less than one year up to forty years and over are given for each year.

The average experience in the Public Schools at the end of 1923 was as follows:

Male teachers, 12.1 years.
Female teachers, 8.2 years.
All teachers, 8.7 years.
Rural teachers (male and female), 5.1 years.
Urban teachers (male and female), 12.3 years.

5. Receipts and Expenditures

Year	Receipts				Expenditures				
	Legislative grants	Municipal school grants and assessments	Clergy reserve funds, balances and other sources	Total receipts	Teachers' salaries	Sites and buildings school houses	Libraries, maps, apparatus, prizes, etc.	Rent, repairs, fuel and other expenses	Total expenditure
	$	$	$	$	$	$	$	$	$
1867	187,153	1,151,583	331,599	1,670,335	1,093,517	149,195	31,354	199,123	1,473,189

1912	842,278	9,478,887	3,936,887	14,258,052	6,109,547	2,777,960	167,755	2,218,698	11,273,960
1917	907,846	12,193,439	4,168,000	17,269,285	8,398,450	1,987,644	290,207	3,435,534	14,111,835
1922	2,976,712	22,842,180	12,805,773	38,624,665	16,690,982	6,284,139	480,483	8,465,280	31,920,884
1923	3,266,584	23,855,879	16,460,831	43,583,294	17,534,704	7,497,509	504,670	10,321,472	35,858,355

The increase for the year 1923 in the amount paid as teachers' salaries was $843,722. The total expenditure increased by $3,937,471. The total value of equipment increased from $2,735,130 to $3,021,568 and all other school property from $77,772,638 to $85,467,626.

These tables show the expenditure per pupil for the years as given below:

Average cost per pupil (enrolled attendance)

	1902	1907	1912	1917	1922	1923
Teachers' salaries.....	$7 04	$9 79	$13 08	$15 91	$27 75	$28 73
Sites and buildings.....	0 95	2 72	5 95	3 77	10 45	12 28
All other expenses.....	2 63	4 34	5 11	7 06	14 87	17 74
For all purposes.....	10 62	16 85	24 14	26 74	53 07	58 75

Average cost per pupil (average attendance)

	1902	1907	1912	1917	1922	1923
Teachers' salaries.....	$12 23	$16 47	$20 98	$24 52	$39 27	$41 21
Sites and buildings.....	1 65	4 58	9 54	5 80	14 78	17 62
All other expenses.....	4 57	7 30	8 19	10 87	21 05	25 44
For all purposes.....	18 45	28 35	38 71	41 19	75 10	84 27

The expenditure per pupil (enrolled attendance) for 1923 in the Public Schools alone will be found in Table E, and for the R. C. Separate Schools in Table F. The expenditure will there be shown as to rural schools, cities, towns, and villages separately.

II. ROMAN CATHOLIC SEPARATE SCHOOLS

†Including all expenditure except for teachers' salaries.

In 1923 an increase of 2,525 in the enrolment and an increase of $643,414 in the expenditure are noticed in the above tables. The expenditure per pupil of enrolled attendance increased from $41.32 to $47.25. The total value of equipment increased from $196,079 to $257,411, and all other school property from $11,355,245 to $12,435,222.

Detailed statistics in reference to these schools will be found in Tables F and G.

III. PROTESTANT SEPARATE SCHOOLS

The following is a complete list of the Protestant Separate Schools of the Province:—No. 1 Grattan, No. 2 Hagarty, L'Orignal and Penetanguishene (two schools).

They were attended by 461 pupils in 1923. The whole amount expended for their maintenance and permanent improvements was $17,041.79. There were eleven teachers, all with Second Class certificates.

More complete statistics for these schools will be found in Table T.

IV. CONTINUATION SCHOOLS

The following table gives statistics of the "Continuation Classes, Grade A," up to and including 1907. Thereafter they are known as "Continuation Schools." Formerly the statistics of these schools were included with the statistics of the Public and Separate Schools, consequently certain items for the years 1897-1907 cannot be given.

Year	Schools	One-teacher schools	Two-teacher schools	Three-teacher schools	Number of teachers	Number of Pupils	Percentage of average attendance to total enrolment	Total value of Equipment
								$
1897	27	20	7	.....	34	1,275	.....	.....
1902	59	46	12	1	73	1,856	.....	.....
1907	91	65	24	2	119	3,993	.....	26,345
1912	138	54	73	11	226	6,094	61.97	75,556
1917-18	137	36	99	2	241	5,104	73.15	93,228
1922-23	181	58	104	19	323	8,777	82.42	158,030
1923-24	189	57	104	28	350	9,337	84.11	180,325

Year	Receipts			Expenditure		
	Legislative Grants	Municipal Grants (County and Local)	Total Receipts	Teachers' Salaries	Sites and Buildings	Total Expenditures
	$	$	$	$	$	$
1897	2,700	.....	.....	.....	.....	.....
1902	8,350	.....	.....	.....	.....	.....
1907	25,610	.....	.....	73,325	.....	.....
1912	64,081	177,133	295,261	202,875	15,750	265,087
1917	65,733	227,715	360,431	228,362	32,328	324,621
1922	148,217	543,872	1,038,602	474,241	243,630	881,431
1923	159,720	621,189	1,105,370	533,395	192,796	969,483

Of the enrolled attendance for 1923-24, 6,366 pupils were in the Lower School and 2,971 in the Middle School. The total attendance was made up of 3,713 boys and 5,624 girls.

Average Cost per pupil, enrolled attendance

	1917	1922	1923
Teachers 'salaries	$44 74	$54 03	$57 13
Sites and buildings	6 33	27 76	20 65
All other expenses	12 53	18 63	26 05
For all purposes	63 60	100 42	103 83

Statistics in detail for 1923-24 in reference to the Continuation Schools will be found in Tables H, I, J and K.

V. COLLEGIATE INSTITUTES AND HIGH SCHOOLS

The following table gives comparative statistics respecting Collegiate Institutes and High Schools from 1867 to 1923, inclusive:

Receipts, Expenditure, Attendance, etc.

Year	Schools	Teachers	Pupils	Percentage of average attendance to total enrolment	Receipts		Expenditure		
					Legislative Grant	Total Receipts	Teachers' Salaries	Sites and buildings	Total expenditure
					$	$	$	$	$

*Report received too late for payment of grant.

Eleven new libraries were added during 1924.

Nine libraries were added to the list of Free Libraries during 1924. Porcupine-Dome, Rittenhouse, Timmins, Toronto (Gerrard Branch), and Windsor Branch, are new libraries. Milton, New Toronto, Port Perry and Russell were formerly Association Libraries.

Six Association Libraries were added during the year. These are Humber Bay, Lambeth, Londesboro, Richard's Landing, New Lowell and Thessalon.

APPENDIX T

SUPERANNUATED TEACHERS

(Ryerson Superannuation Scheme)

Summary for Years 1882-1924

Year	Number of Teachers on List	Expenditure for the Year	Gross Contributions to the Fund	Amount Refunded to Teachers or to the Estates of Teachers
		$ c.	$ c.	$ c.
1882	422	51,000 00	13,501 08	3,660 10
1887	454	58,295 33	1,489 00	3,815 80
1892	456	63,750 00	1,313 50	786 86
1897	424	62,800 33	847 00	620 27
1902	407	64,244 92	1,073 50	722 78
1907	375	63,018 55	766 00	764 54
1912	297	†52,696 90	†504 65	†443 01
1917	245	†48,232 00	†353 60	†810 92
1922	159	†55,799 75	†4 00	†73 80
1923	154	†52,655 00	.....	.....
1924	134	†47,578 50	†18 50	†222 17

The annual allowance to each Superannuated Teacher was increased by the Legislature in 1920. Payments are at the rate of $11 per year of service instead of at $6 as formerly.

† For fiscal year ending 31st October.

APPENDIX U

MODEL SCHOOLS

I.—Autumn Model Schools, 1924

School	Principal	Attendance			Extra-mural	Limited Third Class	District	Rejected
		Total	Male	Female				
Cornwall	G. R. Theobald	5	0	5	1	6	..	..

APPENDIX V

LIST OF CERTIFICATES ISSUED BY THE DEPARTMENT OF EDUCATION, 1924

I. Public School Inspectors

Bowden, William L., B.A. (Queen's)
Davidson, D'Arcy M., B.A. (Queen's)
Smith, Donald G., B.A. (Queen's)
Wheable, Geoffrey A., B.A. (Queen's)

II. High School Principals' Certificates

Brackenbury, George L., M.A. (Science)
Butt, Stephen, B.A.
Campbell, Mabel, B.A.
Coles, William G., B.A. (Com.)
Currie, John E., M.A.
Dippell, Louis W., B.A. (Science)
Durie, Helen F., M.A.
Fraser, Sadie M., B.A.
Fuller, David S., M.A. (Math. & Phys.)
Gordon, John G., M.A.
Griffin, Elizabeth H., B.A. (Sr. St. Dorothy)
Harvey, Humphrey G., B.A. (Com.)
Hill, Kenneth S., B.A.
Jamieson, Harold W., B.S.A. (Science & Agric.)
Johnson, Walter C., B.A. (Eng. & Hist.)
Langford, Howard D., M.A. (Eng. & Hist.)
MacDonald, Jessie H., B.A. (Classics)
McDermid, Ina E., B.A.
McLean, Helen G., B.A.
Oatway, George A., B.A. (Mods. & Hist.)
Quirk, Eric L., B.A. (Math. & Phys.)
Roach, Edith E., B.A. (Mods. & Hist.)
Roszel, John M., B.A.
Smith, Percy V., B.A.
Stapleton, Louis J., B.A.
Starr, Hannah J., B.A.
Summerhays, Robert V., B.A. (Science)
Truscott, Edith L., B.A.
Wallace, John B., B.A.
Wallen, Wilfred B., B.A.
White, Mrs. Mary I., B.A. (Science)
Wright, Jennie, B.A.,

III. High School Assistants' and Specialists' Certificates

Adams, Ada M., B.A. (Eng. & French)
Adams, John M. (Phys. Cult.)
Adamson, Florence M., B.A. (Art)
Aitchison, Russell J.
Alderson, Bessie G. (Art)
Allan, George R. (Phys. Cult.)
Allan, Lois M., B.A.
Archibald, Arthur, B.S.A. (Agric.)
Armour, Elizabeth F., B.A.
Arnot, Colin M. (Phys. Cult.)
Baker, Mrs. Irene F.
Balfour, Irene K., B.A. (Mods. & Hist.)
Bates, Dallas W., B.A. (Math. & Phys.)
Beasley, Jean E., B.A. (Household Science)
Bell, Ethel, M.A.
Bell, Richard L., B.A.
Black, Lois G., B.A.
Bradley, Elsie P.
Breckon, Flora L., B.A. (Classics)
Brigham, Olvetta (Art)
Buchanan, George, B.A.
Burk, Charlotte A., B.A. (Com.)
Butt, Stephen, B.A.
Cameron, Jean B., B.A.
Cameron, Mary, B.A. (Sister Agnes, Sacred Heart)
Cameron, Myrtle W. L., B.A. (Art)
Campbell, Beatrice L., B.A.
Campbell, Henry J., B.A. (Math. & Phys.)
Carter, Chetwynd S.
Cavell, Ernest E., B.A. (Com.)
Chantler, Gladys W., B.A. (Math. & Phys.)
Chrysler, Herbert W., B.A.
Clark, Alice B. (Phys. Cult.)
Clendenning, Beatrice E., B.A.
Clipperton, Otto L., B.A. (Fr. & Germ.)
Cole, Florence I., B.A. (Phys. Cult.)
Cowan, Katherine S., B.A. (Phys. Cult.)
Craig, Harold A., B.A. (Phys. Cult.)
Croal, Albert G., M.A. (Science)
Cummiford, Lytle M., B.A.
Cumming, Mary E., B.A. (Eng. & Hist.)
Currie, Mima K.
Dafoe, Essa C., B.A.
Dickson, Helen M., B.A. (Com.)
Dickson, Lucy I. (Com.)
Dickson, Marion C., B.A. (Com.)
Eby, Emma L., B.A. (Fr. & Germ.)
Elliott, H. James, B.A.Sc.
Ewart, Jessie E., B.A. (Art)
Fasken, Samuel A., B.A.
Ferguson, Mabel R., B.A. (Eng. & Hist.)
Fines, Edmund A., B.A. (Math. & Physics.)
Forman, James H., B.A. (Eng. & Hist., Phys. Cult.)
Forsyth, Ernest, B.A.
Foster, Helen E. (Phys. Cult.)
Foster, Mary M.
Fox, Eleanor G., B.A.
Franklin, Florence A., B.A. (Art)
Fraser, Laura G., B.A. (Art)
Fuller, David S., M.A. (Math. & Phys.)
Fyckes, Jessie D., B.A. (Phys. Cult.)
Galbraith, Flossie P., B.A.
Gardner, Gwendolen, B.A.
Garrett, Norman P.
Gilbert, Alfred F. S., B.A., B.Sc. (Science)
Girdler, Charles A., M.A.
Gould, Ford M., B.A. (Art)
Graham, A. Fern (Phys. Cult.)
Grant, Lucy, B.A. (Science)
Gray, Blair, B.A. (Math.)

III. High School Assistants' and Specialists' Certificates (Continued)

Guenther, John F., B.A. (Classics)
Hall, Everett O., M.A. (Math. & Phys.)
Hamblin, Flora, B.A.
Hanahoe, Margaret B., B.A. (Sr. M. Mildred)
Hay, Winnifred, B.A.
Helson, Margaret J., M.A. (Spanish)
Hicks, Viva M. (Art)
Hocking, William J., B.A.
Holland, Edna M., B.A. (Phys. Cult.)
Holland, Kathleen M., B.A. (Phys. Cult.)
Hopkins, Marguerite V.
Houghton, Charles W., B.A. (Phys. Cult.)
Hutchinson, May R. (Phys. Cult.)
Inman, Marjorie E.
Jones, Charles D., B.A.
Johnston, Florence M., B.A. (Phys. Cult.)
Kelley, Irene M., B.A. (Phys. Cult.)
Kendall, Sybel M., B.A. (Phys. Cult.)
Kenny, Mary B., B.A.
Kerr, Wilfred B., B.A.
Kirk, Helen T., B.A. (Mods. & Hist.)
Knapp, Elizabeth E. (Phys. Cult.)
Knapp, Frederick D., B.A.
Knowles, Kate M., B.A.
Langford, Howard D., M.A. (Eng. & Hist.)
Leckie, Edith H., B.A.
Little, Evelyn M. (Art)
Lucas, Alexander B. (Phys. Cult.)
Mabee, Helen A., B.A. (Eng. & Hist., Art)
MacDonald, Jessie H., B.A. (Phys. Cult.)
MacPhail, Mary C., B.A.
Mackey, Mary I., M.A.
Maitland, Jessie H., B.A. (Eng. & Hist.)
Mallory, Gordon H., B.A. (Science)
Manning, Robert L. (Phys. Cult.)
Marr, Mrs. Grace, B.A.
Marshall, George E., B.A. (Phys. Cult.)
Maus, Janet W., B.A. (Phys. Cult.)
Maxwell, Helen M., B.A. (Fr. & Germ., Phys. Cult.)
McArdle, Ethel (Sr. M. St. Stanislaus)
McArton, Margaret H., B.A.
McDermid, Ina E., B.A. (Phys. Cult.)
McEachen, Agnes, B.A. (Sr. St. Clare)
McGregor, Lena N., B.A.
McGregor, Mary R., B.A.
McIntosh, Margaret, B.A. (Phys. Cult.)
McKee, William C. (Phys. Cult.)
McLaren, Mary R., B.A.
McNaughton, John L., B.A. (Phys. Cult.)
Medcof, William T., M.A. (Eng. & Hist.)
Meng, Louis H., B.A.
Meredith, Geraldine M., B.A. (Phys. Cult.)
Millar, Katie M., B.A. (Science)
Miller, Harry M., B.A. (Phys. Cult.)
Milne, James W. (Art)
Money, Mabel L. K. (Art)
Monkman, William C.
Moore, Kathleen V., B.A. (Mods. & Hist.)
Moran, Harold F. (Phys. Cult.)
Morrow, Arthur S.
Moses, Thelma, B.A.
Muir, Peter, B.A.
Mullett, Helen F., B.A.
Nelson, Dorothy A. (Phys. Cult.)
Nelson, Mabel E., B.A. (Science)
Noseworthy, Joseph W., B.A.
O'Brian, Mabel B., B.A. (Math. & Phys.)
O'Neil, Henry S. (Brother St. Gregory)
O'Reilly, Madeleine A. (Sr. St. Eugene)
Oaks, Anna M., B.A. (Phys. Cult.)
Odell, Jean G., B.A.
Orr, Wilma N., B.A.
Partridge, James A., B.A.
Petrie, Peter A., B.A., B.Paed. (Math. & Phys.)
Philp, James H., B.A. (Math. & Phys.)
Pike, Abram B., B.A. (Phys. Cult.)
Proudfoot, Rolf M. (Com.)
Quinn, Mamie G. (Phys. Cult.)
Redmond, Mildred I., B.A.
Renaud, Elmer D., B.A.
Reynolds, Norman W., B.A. (Math. & Phys.)
Robertson, Marion E., B.A. (Eng. & Hist.)
Rowntree, Myrtle M., B.A. (Eng. & Hist.)
Russell, Estella E., B.A. (Math. & Phys., Phys. Cult.)
Russell, James W., B.A. (Science)
Russell, Samuel M.
Ryan, Mae H., B.A. (Art)
Ryan, Michael W., B.A. (Art)
Saunders, Alice I., B.A.
Saunders, Lucy, B.A. (Eng. & Hist.)

Shannette, Linden E., B.A.
Shaw, Edna L. L., B.A.
Shepard, Gladys H., B.A. (Mods. & Hist.)
Sheppard, Harold N., B.A.
Shoebotham, Barbara M., B.A.
Short, Wesley R., B.A.
Sinclair, Alexander, M.A. (Math. & Phys., Phys. Cult.)
Smith, Janet H., B.A. (Mods. & Hist.)
Smith, Percy V., B.A. (Phys. Cult.)
Smith, S. Louise (Art)
Smith, Wesley C., B.A. (Classics)
Smithendorf, Herbert F. (Phys. Cult.)
Smyth, Alice C. (Art)
Snell, Margreta E., B.A. (Classics)
Steinberg, Albert G., M.A.
Stevens, Vernon S., B.A.
Stevenson, Arthur B., M.A. (Math. & Phys.)
Stewart, E. Grace, B.A. (Phys. Cult.)
Stewart, James H., B.A. (Phys. Cult.)
Stewart, Jennie
Sutherland, Donald A., B.A. (Phys. Cult.)
Sutherland, Ida E., B.A. (Household Science)
Tapscott, Lottie M., B.A.
Taylor, Annie M. A., B.A. (Eng. & Fr.)
Theriault, Theresa E., B.A.
Thomas, Edward H., B.A. (Art)
Tickell, L. Josephine, B.A. (Phys. Cult.)
Tilden, Christina M., B.A. (Eng. & Hist.)
Trout, Marion E.
Wakeling, Alfred A. (Phys. Cult.)
Walkom, Elmer J., B.A.
Warrell, Edith A. (Art, Phys. Cult.)
Wert, Agnes G., B.A.
West, John B., B.A. (Classics, Phys. Cult.)
Whiteman, Margaret (Art).
Wilton, Helen I., B.A.
Wood, Hilda F., B.A.
Wood, Rachel L. E., B.A.
Wright, Jennie, B.A. (Phys. Cult.)
Young, Janet M., B.A.
Ziehr, Mathilde T., B.A. (Art)

IV. Permanent Elementary and Auxiliary Class Certificates

Alderson, Bessie G. (Phys. Cult.)
Alexander, Maude B. (Agric.)
Allan, Lois M., B.A. (Art)
Alles, Howard W. (Art)
Anderson, Jessie E. (Agric.)
Andrew, Robert (Vocal Music)
Armstrong, Vivia O. (Agric.)
Baker, Mrs. Irene F. (Phys. Cult.)
Ballge, Rose C. (Sr. M. Euphrasia) (Agric.)
Barker, Beryl F. (Agric.)
Barlow, Isabel (Aux. Classes)
Bate, Clare (Agric.)
Bathurst, Sara (Agric.)
Baxendale, Gladys (Agric.)
Bell, Eva A. (Agric.)
Berney, (Mrs.) Rachel M. (Agric.)
Blakslee, Mary B. (Auxiliary Classes)
Bolton, Vina B. (Agric.)
Bonis, Margaret E. (Phys. Cult.)
Bonnycastle, Helen M. (Auxiliary Classes)
Bowling, Elizabeth (Auxiliary Classes)
Brigham, Olvetta (Physical Culture)
Brunkard, Ethel (Phys. Cult.)
Buckley, Amelia C. (Agric.)
Burt, Arthur C. (Manual Training)
Bushfield, Kathleen I. (Agric.)
Butt, Stephen, B.A. (Phys. Cult.)
Cameron, Mary, B.A. (Sr. Agnes) (Phys. Cult.)
Cameron, Morna B. (Agric.)
Campbell, Beatrice L., B.A. (Phys. Cult.)
Cawsey, Clare E., B.A. (Phys. Cult.)
Chapman, (Mrs.) Retta M. (Art)
Clatworthy, Frances E. (Agric.)
Claus, Leila E. (Household Science)
Clements, Dorothy P. (Art)
Cleminson, Florence E. (Agric.)
Cleveland, Frances (Manual Training)
Connell, Constance L. (Art)
Connolly, Eunice (Sr. Mary) (Agric.)
Cooper, Ruth L. (Agric.)
Coulthard, Margaret D. (Agric.)
Crabbe, Margaret H. (Sewing)
Crowe, Marie, B.A. (Phys. Cult.)
Cull, Clara (Sr. M. Afra) (Agric.)
Cummiford, Lytle M., B.A. (Phys. Cult.)
Danford, Gladys I. (Agric.)
Devitt, Gwendolyn (Agric.)
Dick, Martha T. (Agric.)
Doane, J. Hartley (Manual Training)
Dodds, Irene I. (Phys. Cult.)
Dougherty, Eleanor F. (Agric.)
Doyle, E. Gertrude (Sr. M. Adelaide)(Agric.)
Drake, Anne M. (Auxiliary Classes)
Dundass, E. Mildred (Agric.)
Edge, Alix M. (Phys. Cult.)
Ellis, Lila M. (Agric.)
Erskine, Winifred E. (Agric.)
Evans, Fred J. (Manual Training)
Fargey, Marjorie E. (Agric.)
Ferguson, Elsie M. (Agric.)
Ferguson, Mary E. (Agric.)
Fitzmaurice, Teresa (Auxiliary Classes)
Fluhrer, (Mrs.) Margaret B. (Phys. Cult.)
Foreman, Kathleen B., B.A. (Phys. Cult.)
Foster, Mary M. (Art)
Fox, Eleanor G., B.A. (Phys. Cult.)
Fraser, Nancy H. (Art)
Fraser, Sadie M., B.A. (Art)
Fretz, Joseph C. (Agric.)
Futcher, Frances E. W. (Agric.)
Galbraith, Flossie P., B.A. (Phys. Cult.)
Glave, Erma J. (Phys. Cult.)
Glen, Edna E. (Art, Phys. Cult.)
Glover, Florence M. (Agric.)
Gould, Ford M., B.A. (Phys. Cult.)
Graham, Cora M. (Phys. Cult.)
Graham, Edna M. (Auxiliary Classes)
Greenwood, Ethel R. (Household Science)
Hale, Mary E., B.A. (Phys. Cult.)
Hall, Edith L. (Agric.)
Hamilton, Agnes E. (Phys. Cult.)
Hamshaw, Christina (Auxiliary Classes)
Hanna, Edna M. (Phys. Cult., Art)
Hartmier, Adam L. (Manual Training)
Hawkins, Mae (Sr. M. Theophane) (Agric.)
Hawn, Bertha (Agric.)
Hawn, Mabel (Agric.)
Hay, Winnifred, B.A. (Phys. Cult.)
Heatly, Esther (Agric.)
Henderson, Jessie G. (Agric.)
Herron, Rosa E. (Agric.)
Hildyard, Ernest, B.A. (Phys. Cult.)
Hill, Daisy E. (Auxiliary Classes)
Hogan, Julia A. (Sr. Callista) (Agric.)
Holt, Mary A. (Art)
Inman, Marjorie E. (Phys. Cult.)
Jackson, Nellie M. (Agric.)
Johnston, Winnifred B. (Auxiliary Classes)
Kennedy, (Mrs.) Lillian (Phys. Cult.)
Kennedy, Una L. (Agric.)
King, Florence M. (Sewing)
King, Nellie N. (Art)
Lapp, Alida J. (Agric.)
Leckie, Edith H., B.A. (Phys. Cult.)
Legge, Ethel (Auxiliary Classes)
Lemay, Clara (Sr. M. Francis Borgia) (Art)
Leslie, Ella G. (Agric.)
Lindsay, (Mrs.) Myra M. (Art)
Longmore, Margery Josephine (Sr. M. Camilla) (Phys. Cult.)
Lowry, Lillian N. (Agric.)
Luxon, Marjorie J. (Agric.)
Mabee, Helen A., B.A. (Phys. Cult.)
MacDonald, Annie (Agric.)
MacKay, Mary E. (Art)
MacKenzie, Fanny C. (Art)
Marquis, Florentena A. (Agric.)
Martin, Florence M. (Auxiliary Classes)
Martin, (Mrs.) Anna (Agric.)
McArton, Margaret H., B.A. (Phys. Cult.)
McBride, Ida R. (Auxiliary Classes)
McCallum, Barbara (Agric.)
McClellan, Joy E. (Art)
McDermid, Leila (Agric.)
McDonell, Margaret, B.A. (Sr. St. Clare) (Art)
McGee, Marjorie E. (Art)
McGregor, Lena N., B.A. (Art, Phys. Cult.)
McGregor, Mary R., B.A. (Phys. Cult.)
McIntosh, Annie W. (Agric.)
McKinnon, Edna M. (Art)
McLaren, Jean H. (Agric.)
McMahon, Zita (Sr. M. Henry) (Agric.)
McMath, Ruth P. (Art)
McNabb, Margaret E. (Art, Phys. Cult.)
Misener, (Mrs.) Lola M. (Agric.)
Mitchell, Gladys E. (Agric.)
Mole, William H., B.A. (Phys. Cult.)
Monkman, William C. (Com.)

IV. Permanent Elementary and Auxiliary Class Certificates (Continued)

Morris, Clive M. (Art)
Morrison, Ray E. (Phys. Cult.)
Muckle, Leata W. (Art)
Mullett, Helen F., B.A. (Phys. Cult.)
Mulvihill, Marguerite P. (Phys. Cult.)
Munro, Gladys R. (Art)
Murray, Mary M. (Auxiliary Classes)
Nash, Nellie J. (Agric.)
Nattress, Eva W., B.A. (Art, Agric., Vocal Music & Household Science)
Neil, Alton A. (Art)
Nephew, Ruth M. (Art, Phys. Cult.)
Nesbitt, Lela T. (Art)
Nill, Hilda M. (Agric.)
Norman, Clara H., B.A. (Art)
Nott, Mary A. (Art)
Nuttall, Ella M. (Agric.)
O'Brien, Hazel A. (Vocal Music)
Oestreicher, Lydia (Agric.)
Oestreicher, Matilda (Agric.)
Oswald, Mary (Art)
Palmer, Ruby C. (Phys. Cult.)
Paton, Mary E. (Household Science)
Patton, Blossom (Manual Training)
Patton, Emma M. (Household Science)
Perry, Neva M. (Art)
Phelan, Frances A. (Agric.)
Pinder, Grace M. (Art)
Pretty, Elsie I. (Agric.)
Redmond, Mildred I., B.A. (Phys. Cult.)
Reid, Emmett C. (Art, Phys. Cult.)
Rendall, Isabella S. (Phys. Cult.)
Ricker, Vera M. (Phys. Cult.)
Robertson, Alma M. (Agric.)
Ronald, Annie (Manual Training)
Rose, Elsie J. (Art)
Rosebush, Bessie H. (Agric.)
Ross, Barbara A. (Auxiliary Classes)
Ross, Edith J., B.A., (Art)
Rounding, Estella (Auxiliary Classes)
Rupert, Margaret E. (Agric.)
Sargent, Violet E. (Agric.)
Saunders, Alice I., B.A. (Art)
Sawyer, Alice M. (Agric.)
Schnick, Frederick W. (Phys. Cult.)
Shaw, Edna L. L., B.A. (Art)
Shepherd, Mossie B. (Auxiliary Classes)
Shepley, Addie M. (Art)
Sheppard, Harold N., B.A. (Phys. Cult.)
Shoebotham, Barbara M., B.A. (Phys. Cult.)
Sloan, Edna V. (Agric.)
Smith, Elizabeth J. (Agric.)
Smith, Ellice M. (Agric.)
Smith, Florence M. (Art)
Smith, Janet H., B.A. (Phys. Cult.)
Smith, Jean G. (Agric.)
Smith, Sybil E. (Art)
Standen, Jean (Sewing)
Steinberg, Albert G., M.A., (Phys. Cult.)
Stevenson, Jean M. (Agric.)
Stewart, Katie (Household Science)
Stewart (Mrs.), Vera C. (Agric.)
Stewart, Violet (Agric.)
Stiles, Pearl V. (Art)
Stirling, Muriel E. (Agric.)
Strachan, Donald L., B.A. (Phys. Cult.)
Stuttaford, Pearl L. (Agric.)
Sullivan, Clarice (Phys. Cult.)
Sutherland, Ida E., B.A. (Phys. Cult.)
Sutton, Kathleen (Phys. Cult.)
Tanner, Wallace (Agric.)
Taylor, Mary H. (Auxiliary Classes)
Thompson, Ethel V. (Auxiliary Classes)
Thompson, (Mrs.) Laura E. (Auxiliary Classes)
Thomson, Ada M. (Auxiliary Classes)
Tilson, Anna (Agric.)
Tobin, Mary, B.A. (Sr. M. Isabel)(Art)
Todd, Hazel A. (Art)
Treitz, Ernest L. (Phys. Cult.)
Trout, Marion E. (Art)
Trowse, Mabel I. (Art)
Turvey, Zelma M. (Agric.)
Urquhart, Catharine (Agric.)
Veale, Gladys M. (Agric.)
Wasmann, Ethyle M. (Art)
Watson, Margaret M. (Agric.)
Watters, Catherine (Sr. St. Bride) (Agric.)
Wert, Agnes G., B.A. (Art)
Westwater, Robert (Com.)
Whelan, Alice (Sr. M. Loyola) (Art)
Whelan, Anna M. (Phys. Cult.)
White, (Mrs.) Mary I., B.A. (Phys. Cult.)
Whyte, Robert, B.A. (Phys. Cult.)
Williams, William W. (Phys. Cult.)
Willis, Sidney H. (Agric.)
Willison, Nellie M. (Auxiliary Classes)
Wilton, Helen I., B.A. (Phys. Cult.)
Wood, Rachel L. E., B.A. (Art, Phys. Cult.)
Young, Jean Myrtle (Art)

V. Permanent Supervisors' and Intermediate Certificates

Adams, John M. (Phys. Cult.)
Ames Vern N. (Phys. Cult.)
Ballge, Rose (Sr. M. Euphrasia) (Phys. Cult.)
Bodkin, Gertrude L., B.A. (Agric.)
Brewster, Violet I. (Art)
Chard, Thomas (Phys. Cult.)
Colhoun, Annie I. (Art)
Gilmour, Hilda A. (Phys. Cult.)
Hamilton, Anne S. (Vocal Music)
Harvey, Mary W. (Phys. Cult.)
Mainprize, Mamie (Art)
Marshall, P. George (Vocal Music)
McConnell, Alma (Vocal Music)
McKercher, Mary E. (Art)
Newell, Lillie C. (Art)
O'Brien, Hazel A. (Phys. Cult.)
O'Leary, Mary (Sr. Philomena) (Art)
Ouellette, Marie E. (Sr. M. Eugenia) (Art)
Patten, Frank G. (Phys. Cult.)
Relyea, Frances J. (Art)
Scott, Rena C. (Agric.)
Shales, William E., M.A., B.Paed. (Agric.)
Smithendorf, Herbert F. (Agric.)
Somerville (Mrs.) Annie (Phys. Cult.)
Sweeney, Catherine (Art)
Toner, Mary (Sr. M. Teresa) (Art)
Wing, Henry (Agric.)

VI. Permanent First Class Certificates

Alles, Howard W.
Armstrong, Floyd C.
Austin, William E.
Babington, Florence M.
Barrington, Ross C.
Becksted, Mary C.
Bondy, Mary E.
Bone, Katie M.
Bonis, Margaret E.
Bremner, Herbert A.
Brown, Clara R.
Cairns, Charlotte H.
Cannom, Lucy V. R.
Carr, David H.
Carruthers, Loretta E.
Caverly, Selma M.
Clark, Helen L.
Coates, George F.
Cole, Elizabeth
Coleman, Bernice J.
Cordick, Ethel A.
Crawford, Lila M.
Crone, Irene R.
Davidson, Eleanor C.
Durrant, Edna D.
Edwards, Henry W.
Ferguson, Mary A.
Fitzgerald, Willa S.
Forster, Dorranda E.
Fox, James H.
Fox, Mary M.
Garner, Mary M.
Glave, Erma J.
Goldthorpe, Evelyn E.
Gorman, Margaret (St. M. Mildred).
Grant, Marion E.
Hall, William S.
Hamilton, Agnes E.
Hamilton, Elizabeth M.
Harnett, Edna M.
Harvey, Mary G.
Harvie, Frederic W.
Hazen, J. Grant.
Hildyard, Ernest, B.A.
Hogg, Ida A.
Holt, Mary A.
Hooker, William V.
Hooper, Marion J.
Hubbert, Frances M.
Ivey, Margaret C.
Jackson, Elspeth J.
Jamieson, Jessie L., M.A.
Johnston, Beryl J.
Johnston, Grace E.
Joness, Evelyn G.
Joyce, John R.
Kennedy, Edna V.
Kerr, James L.
Klinck, George A.
Knight, Ruby M. A.
Knowles, Frances T.
Koch, Gordon C.
Kramer, Marion L.
Laing, William T.
Lamaire, Gabrielle (Sr. St. Lorenzo).
Lancaster, Edna P.
Le Hane, Hana (Sr. M. Camilla).
Long, Irene M. (Sr. M. Irma).
Longmore, Margery J. (Sr. M. Camilla).
Lount, Edna M.
MacArthur, Mary L.
MacKay, Mary E.
MacNab, Janet.
Madden, Greta E.
Mahoney, Alice I.
Matheson, Ursula H. M.
McCaul, Margaret J.
McCulloch, Margaret E.
McGuire, Adam W., B.A.
McIntosh, Mary D.
McKee, Marjorie P., B.A.
McKendry, William C., B.A.
McKercher, Jessie M.
McKinley, Clara E.
McMahon, Louise A.
McPherson, Sarah H. (Sr. M. of St. Irma).
Metler, Mildred L.
Meuser, Marjorie K.
Monkhouse, Helen.
Montgomery, Bella.
Moreau, Martine (Sr. Joseph Eugene).
Morgan, Gladys Irene.
Morrison, Ray E.
Neil, Alton A.
O'Donnell, Bernadette.
O'Neill, Ruby E.
Owen, Irena L.
Pack, Eleanor S.
Patterson, Cora G.
Pierce, Donald J.
Pike, Velma I.
Porter, William G.
Pringle, Elsie M.
Rath, Rosella J.
Robertson, J. Margaret.
Robinson, Gladys M.
Rose, Elsie J.
Rose, Eva M.
Ross, Christina B.
Rowe, James S.
Ruse, Alice I.
Russell, Olive R.
Schofield, Muriel M.
Shepperson, Frances G.
Smith, Alice M.
Smith, Keitha M.
Smith, Sybil E.
Sneddon, Harold R.
Snelling, Marjorie M.
Snyder, Vesta J.
Sparling, Percy H.
Stephenson, Ruby M.
Stiles, Pearl V.
Story, Charles A.
Story, Robert E.
Sturgis, Harold La V.
Sullivan, Madeleine (Sr. M. Dolorosa).
Summers, Norma C.
Surch, Grace E.
Sutton, Kathleen.
Taylor, Elizabeth D.
Thomson, Jessie M.
Toner, Mary (Sr. M. Teresa).
Turnbull, Mabel E.
Van Allen, Phyllis L.
Vincent, Daisy A.
Waldie, John R.
Walker, Flora J.
Wallace, Olive M.
Weekes, Frank S.
Wells, Blanche M.
White, Mary F.
Wightman, Norman R.
Willsie, Florence C.
Wilson, Beatrice C.
Wilson, Katharine E.
Wismer, May O. J.
Wood, Samuel D.

VII. Permanent Second Class Certificates

Acheson, Julia.
Adams, Beatrice G.
Adams, (Mrs.) Ena M.
Aiken, Rebecca B.
Aitchison, Freda.
Alguire, Mary E. V.
Allan, Catherine C.
Allen, Verna.
Allingham, Earl C. W.
Allingham, Milton.
Allison, Nellie.
Alton, Mary.
Anderson, Carrie E.
Anderson, Dorothy F. M.
Anderson, Dorothy H.
Anderson, Harry Merritt.
Anderson, Jessie E.
Anderson, Joseph T.
Anderson, Margaret J.
Andrews, Clare T.
Andrews, Kathleen M.
Annett, Marguerite E.
Annis, Florence I.
Apps, Alberta R.
Archer, Mamie M.
Archer, Sarah E.
Archer, William R.
Arkinstall, Catherine M.
Ashby, Elva V.
Askew, Charlotte M. A.
Atkinson, Marjorie K. H.
Attridge, Ella M.
Austin, Veronica M.
Avery, Lottie L.
Awford, Lotta E.
Babb, Jean Estella.
Bacon, Winifred M.
Badgley, Verda J.
Bain, Leslie Isobel (Miss).
Baker, Emma W.
Baker, Evelyn F.
Baker, Isobel.

VII. Permanent Second Class Certificates (Continued)

Baker, Lloyd L.
Baker, Mabel G.
Bald, Emma K.
Bald, Marion G.
Ball, Emily M.
Barker, Beryle F.
Barnard, Alford Grace R.
Barrie, Hazel.
Barrigar, Frances L.
Batty, Helen G.
Baxter, Annie.
Baxter, William R.
Bayley, Alfred L.
Bayley, Thomas S.
Beath, Thomas H.
Beattie, Adam N.
Beckstead, Mary A.
Beehler, Helen E.
Bell, Anna P.
Bell, Dorothy W.
Bell, Earl A.
Bell, Inez B.
Bell, Jean A.
Bell, Jessie J.
Bell, Lillian G.
Bennett, Eileen A.
Best, Helen L. C.
Bird, Marjorie E.
Bishopp, John R.
Black, Hilda F.
Black, (Mrs.) Jennie E.
Black, Rose M.
Blackwell, Vicla E.
Blaine, Georgina.
Blaine, Lila A.
Blaney, Laura A.
Bogart, Eileen A.
Boland, Jean L.
Bolton, Elva I.
Bolton, Ernest A.
Bolton, Flora M.
Bond, Annie C.
Bottomley, S. Alice.
Bouck, Barbara G.
Bourne, Beatrice J.
Bowes, Mabel W.
Bowyer, Mildred.
Boyd, Myrtle E.
Bradley, Alice H.
Bradley, Annie E.
Bradley, Bertha.
Bradley, David P.
Bradley, Margaret B.
Bradley, Mildred V.
Braund, Grace A.
Breen, John L.
Brett, Ruth J.
Briggs, Mary S.
Brocklebank, Eva M.
Brocklebank, Florence M.
Brooks, Amy A.
Broughton, Madeline G.
Brown, Alexander O.
Brown, Florence E.
Brown, Gladys W.
Brown, Hazel R.
Brown, Helen C.
Brown, Jessie W.
Brown, Thelma A.
Brown, Violet E.
Browning, Edna A.
Browning, Gladys R.
Brownlee, Edythe E.
Bruce, Emma M.
Bruce, Gladys A. J.
Bruegeman, Coronna R.
Bruin, Elsie A.
Brush, Bessie A.
Buchanan, Beatrice M.
Buchanan, Evelyn E.
Buchanan, Peter H.
Buckingham, Jessie.
Buell, Thelma M.
Bullick, Sarah A.
Bulmer, Margaret G.
Burden, Frances M.
Burgess, Emily E.
Burke, Clare.
Burns, John F.
Burns, Mary.
Burns, Mary W.
Burnside, Helen M.
Burr, Ronald C.
Burrows, Edna M. A.
Burrows, Victoria M.
Bushfield, Kathleen I.
Butchart, C. Mary.
Byers, Isabelle M.
Cahill, Mary.
Cain, Louisa (Sr. M. Constance).
Callum, Alice I.
Cameron, Ella A. (Sr. M. Callista).
Cameron, Harriet B.
Cameron, Jean P.
Cameron, Morna B.
Campbell, Annie S.
Campbell, Mary B.
Campbell, Mary E.
Campbell, Nellie I.
Campbell, Norman, M.A.
Campbell, Ruth W.
Campbell, Wishart N. M.
Canning, Gertrude M.
Cant, (Mrs.) Adelaide V.
Card, Mercie M.
Caron, Regina, B.A. (Sr. d'Youville).
Carroll, John S.
Carruthers, Gwendoline.
Carscadden, John M.
Carscallen, Helen M.
Carson, Margaret O.
Carson, Ola F.
Carter, Edna J.
Carter, Rose Mary.
Carty, Elizabeth.
Casselman, Arthur A.
Casselman, B. Roy.
Casselman, Elizabeth.
Casselman, Helen E.
Casselman, Marion N.
Cassidy, Helena M.
Caswell, Alma.
Cattanach, Helen.
Cavanagh, Mary R.
Chambers, Bessie M.
Chandonet, Marie A. J.
Chapman, Geraldine F.
Chapman, Hilda.
Chapman, Margaret.
Charlton, Ethel M.
Charman, Dorothy M.
Chartrand, Emma J.
Checkley, Olive L.
Chisholm, Margaret W.
Christian, Olive.
Christie, Myrtle I.
Christie, Ursula M. C.
Clapson, Lena J.
Clapson, Lulu.
Clark, Elizabeth G.
Clarridge, Myrtle W.
Claughton, Milly V.
Cleland, Hillary.
Clement, Earl E.
Cline, Marion L.
Clubb, Helen E.
Cole, Marie A.
Cole, Mildrew V.
Coleman, Agnes Una J.
Coles, Gladys C. M.
Coligan, John R. R.
Collier, Lillian E.
Colling, Alice S.
Colling, Rhena J.
Collins, Ethel E.
Collins, Mary (Sr. Patrick of Jesus).
Collins, Stella L.
Collison, Herman B.
Collver, Hugh R.
Colwell, Lydia A.
Comerford, Alma I.
Condy, Annie.
Conlon, Mary.
Connolly, Muriel M.
Connor, Agnes L.
Conroy, Catherine E.
Consley, Edith B.
Convay, Anna J.
Convey, Rose M.
Conway, Ellen M.
Cook, Florence L.
Ccoke, Florence.
Cooke, Gladys A.
Cooper, Olive Isabel.
Copping, Elsie B.
Cornell, Hattie V.
Cosford, Geraldine L.
Cotten, Vera E.
Coulson, Edna E.
Coulter, Ada A.
Coutts, Grace M.
Cowan, Evelyn A.
Cox, Eva G.
Crabbe, Mary H. L.
Craig, Ellen G.
Craig, Jessie E.
Crane, Herbert W.
Crawford, Donald T.
Crombie, Gertrude M.
Cronin, Rosella (Sr. M. Angeline).
Cronk, Eva V. M.
Crossley, Alfred.
Crough, Lillian A.
Crough, Michael J.

VII. Permanent Second Class Certificates (Continued)

Crozier, Nellie R.
Culhane, Irene.
Cunningham, Annie.
Cunningham, Winifred M.
Cupples, Mildred D.
Currie, Georgina.
Curry, Luella E.
Curtis, Leslie M.
Dale, Ruth M.
Dales, Elta I.
Dalrymple, Edna I.
Dalton, Kathleen M.
Davey, Della M.
Davidson, Agnes S. E.
Davidson, Mae W.
Davis, Mae M.
Dawes, Anna M.
Dawson, Bruce B.
Dawson, Gertrude E.
Deacon, Irene G.
Deloughery, Ann M.
Denne, Evelyn L.
Dent, (Mrs.) Mabel B.
Depew, Allie.
Devitt, Gwendolyn J.
Devitt, Olive E.
Dewar, Elva F.
Deyell, Esther C.
Dickie, Marjorie P.
Dickson, Mary L.
Diehl, Wallace McG.
Dinsmore, Selena C.
Dobie, Violet A.
Doherty, Eva M.
Donlevy, Rose.
Donnelly, Madeline C.
Donovan, Annie C.
Doran, Edith M.
Dow, Beatrice A.
Dow, (Miss) George Bernice.
Down, Beatrice V.
Downey, Mary E.
Downey, Violet G. I.
Dowsley, Ethel M.
Doyle, Anna (Sr. M. Mechtilde).
Doyle, Estella M.
Doyle, Margaret M. (Sr. M. Emmanuella).
Drohan, Veronica E.
Drummond, Mary Muriel.
Dudley, Dorothy G.
Duff, Frances M.
Duff, Wilma M.
Duffy, Bernard S. (Bro. T. Bernard).
Duggan, Mona K.
Duncan, Lulu Irene.
Dundass, Elsie M.
Dunk, William J. H.
Durant, Sarah A.
Earl, Robert C.
Earl, Wellington M.
Earls, Jennie E.
Earshman, Elizabeth A.
Eberhart, E. Hilda.
Ecker, Gladys.
Eddie, Margaret.
Edwards, Evelyn.
Edwards, Evelyn F.
Edwards, Jean C.
Egan, Veronica M.
Elborn, Harold E.
Ellis, Eva P.
Elson, Olive P.
Empey, Alice Isobel.
Empey, Marjorie B.
England, Agnes C.
English, Irene C.
Ennis, Estella M.
Farrar, Maude B.
Farrell, Mary M.
Farrow, Annie L.
Farrow, Lillian M.
Fax, M. Carmelita.
Fear, Ella J.
Felker, Winnifred M. M.
Ferguson, Evelyn M.
Ferguson, Mabel E.
Ferguson, Marie E.
Field, Annie L.
Finch, Mary H.
Findlay, Annie L.
Finkbeiner, Hazel M.
Finleon, Mary M.
Fisher, Duncan C.
Fitzgerald, Loretto (Sr. M. Modesta).
Fitzsimmons, Orelle A.
Flack, Winnifred A.
Flaxman, Ada L.
Flaxman, Doris A.
Fleming, Margherita Y.

Henry J. Payette appointed as a Separate School Inspector. Approved 16th September.

Robert W. Anglin appointed as High School Inspector. Approved 22nd September.

Robert A. Croskery appointed as Registrar. Approved 22nd September.

Regulations respecting Medical and Dental Inspection of Public and Separate Schools. Approved 30th September.

K. Oswald Birkin appointed as Assistant Master, Normal School, Ottawa. Approved 1st October.

Miss F. Luella Barrigar appointed as Physical Instructress, Normal Model School, Ottawa. Approved 1st October.

Miss Phyllis Van Allen appointed Teacher, Ontario School for the Deaf, Belleville. Approved 1st October.

Miss Isobel Draper appointed Teacher, Ontario School for the Blind, Brantford. Approved 7th October.

Frederick Lord and Mrs. Dorothy M. Lord appointed Musical Director and Violin Teacher, respectively, at the Ontario School for the Blind, Brantford. Approved 7th October.

The following list of Teachers appointed to the Ontario School for the Deaf, Belleville: Miss V. G. Handley, Miss E. Nurse, Miss L. Carroll, Miss B. Rierdon, Miss A. Aitchison, Miss B. Sinnott, Miss N. Brown, Miss H. McTear, E. B. Lally, K. C. VanAllen, M. Blanchard, Miss L. Churchill, Miss K. Simmons, Miss M. Coffey, Miss C. Blakely, Miss M. Cass. Approved 7th October.

The following list of Teachers appointed to the staff of the Ontario School for the Deaf, Belleville: Misses Erma N. Panter, Edna Vanderwater, Marguerite Coulter, Margaret Lally. Approved 7th October.

Miss Mildred E. Hallett appointed Teacher, Normal School, Ottawa. Approved 7th October.

Miss Una Truax appointed Clerk, Department of Education. Approved 7th October.

Regulations 34 (2) (a) of Circular 23, "Regulations and Examinations of the Normal Schools" amended. Approved 7th October.

Harvey H. Andrews appointed Assistant Teacher, Sturgeon Falls English-French Model School. Approved 9th October.

Edward H. McKone, appointed as Master, Normal School, London. Approved 13th October.

Circular 4½, "The Syllabus of Regulations and Courses for the English-French Model Schools at Ottawa, Sandwich, Sturgeon Falls and Vankleek Hill, Session 1924–'25"; Circular 4, "The Syllabus of Regulations, Courses of Study and Examinations of the Autumn Model Schools at Cornwall, Kingston, Orillia and Renfrew, Session 1924"; "Re Upper School Examinations of 1925 in German"; "Courses of Study Public and Separate Schools, 1924"; "Courses of Study and Examinations of the High Schools, Collegiate Institutes and Continuation Schools" (Revised, 1924). Approved 21st October.

Section 1 (3) of Regulations respecting the validity of teachers' certificates, as contained in Circular 30½, amended. Approved 22nd October.

Circular 43a, "Requirements for admission to the professional courses at the English-French Model Schools." Approved 30th October.

Miss Maude G. N. Irving appointed Teacher, Normal School, Hamilton. Approved 30th October.

Adrien Potvin appointed Teacher, Normal Model School, Ottawa. Approved 4th November.

Orvill E. Ault appointed as Assistant Master, Normal Model School, Ottawa. Approved 27th November.

Robert Gillies, B.A., and Donald G. Smith, B.A., appointed District Public School Inspectors; duties to commence January 1st, 1925. Approved 27th November.

William J. Eames appointed Stationary Engineer, Northern Academy, Monteith. Approved 4th December.

The following added as Clause (d) to Section 38 of the Regulations of the Consolidated Schools:

"If it is deemed necessary for the convenience of the electors, the Board may designate more than one polling place in the consolidated section, and for each of such polling places shall appoint a Deputy Returning Officer." Approved 5th December.

Robert E. Virtue appointed as Guard, Ontario Provincial Museum. Approved 16th December.

Miss Gladys E. Platt appointed Junior Clerk, Legislative Library; duties to commence January 1st, 1925. Approved 23rd December.

APPENDIX X

ONTARIO SCHOOL FOR THE BLIND

ANNUAL REPORT OF THE SUPERINTENDENT

To The Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—I have the honour to transmit herewith the fifty-third Annual Report of the Ontario School for the Blind, Brantford, for the year ended 31st October, 1924.

I have the honour to be,
Sir,
Your obedient servant,
W. B. Race,
Superintendent.

Brantford, December, 1924.

The Attendance

In presenting the fifty-third Annual Report of the Ontario School for the Blind, I beg to report the average attendance for the session which ended June, 1924, as 138. School opened in September, 1923, with 132 in attendance. Before the end of the school term in June, 1924, twelve new pupils entered, making a total attendance of 144, of whom ninety were boys and fifty-four girls.

The registration of pupils for the twelve months of the official year from October 31st, 1923, to October 31st, 1924, was 161, just twelve less than in the preceding year. The total registration at the opening of the school in September, 1924, was 129.

At the opening of the school in September, 1924, it was found that thirty-two pupils had not returned after the summer vacation, of whom eighteen were boys and fourteen girls. Of these, ten graduated, two moved to the United States and entered other schools for the blind, seven remained at home until later in the term for various reasons, two entered high school, four obtained employment, one died, and five remained at home to get medical treatment.

The Staff

Mr. Galloway, Musical Director for several years, resigned to accept a position in Toronto. His place has been filled by Mr. Frederick Lord, organist of the First Baptist Church, Brantford. Miss Marjorie Jones, who had been violin instructor for eight years, resigned to accept a position in the State Normal School in Pennsylvania. Mrs. Frederick Lord was appointed to succeed her.

Miss Hazel Lowry, Literary Teacher, resigned after five years of service to get married, the vacancy being filled by the appointment of Miss Isobel Draper, of Clinton.

Mrs. Stewart, who acted as Matron so acceptably for many years, was reluctantly compelled to hand in her resignation, and Miss Scace, the boys' nurse, has been acting temporarily as Matron since the opening of the fall term, an assistant being engaged to take over her duties in the meantime.

New Pupils at the Opening of the School, September 24th, 1924

Name	Address
Allen, Gabrielle	Toronto, Ont.

Boy Scouts

It is a pleasure to report the interest taken during the past year in the Boy Scouts' organization. The boys put on a minstrel show in the Assembly Hall in the early spring, and with the proceeds hired motor conveyances to take them, forty in number, to Niagara Falls. They were royally entertained in that city by the members of the Rotary Club. At the noon luncheon the boys provided the programme with their orchestra, and in the afternoon they were taken to the American side and altogether spent one of the happiest days of their lives. The Niagara Falls Rotarians wrote in the highest terms of the musical entertainment provided by the boys, and expressed themselves as highly impressed by the smartness, manliness, and dignified deportment of the boys.

Field Day

On the afternoon of October 29th, the pupils held a very successful field day, both the boys and girls entering with zest into the various competitions. A new race track was laid in the park, and the different events were followed with the keenest interest by the pupils and by many visitors from the city. An interesting feature of the day was the fact that the medals and prizes were provided by the members of the Alumni Association of the school. The interest taken in their welfare by the ex-pupils of the school is highly appreciated, and it establishes between the school and its graduates that happy relationship which should exist between those who have severed their connection with the school and those now in attendance.

Christmas Programme

The Christmas programme was of unusual interest this year owing to the presence of the President and Vice-President of the Alumni Association, Miss

E. Nesbitt, of Walkerton, and Mr. H. Treneer, of Toronto. An interesting feature of the programme was the presentation by Miss Nesbitt of medals to the winners in the Field Day contests. Miss Nesbitt referred feelingly to her own happy days in the school, and spoke of her pleasure at the interest taken in the physical training of the pupils. Mr. Treneer also addressed the pupils and Mrs. E. C. Gould, in behalf of the Brant Chapter of the I.O.D.E., presented beautiful cuff links to George Patrick for proficiency in Canadian history.

Physical Training

The extra attention paid during the past year to physical training is shown in a marked improvement in the appearance and general health of the pupils. It must be admitted that never has there been a term with so few cases in the hospital, and although it may be regarded by some as a mere coincidence, the fact is in my opinion not without significance in view of the strict supervision paid to diet, exercise, and regular habits of life.

New Lockers

New lockers were installed in the boys' side during the summer, with the result that the confusion caused by missing articles of clothing has now been reduced to a minimum. These lockers are just large enough for each boy to have a secure receptacle for his belongings, such as cap, mittens, rubbers, etc., and this puts an end to the previous annoyance of delays caused by searching in different corners of the building.

Death of Mr. Gardiner

It is with regret that I record the death of Mr. H. F. Gardiner, Superintendent and Principal of this school from July 15th, 1903, to August 31st, 1916. Mr. Gardiner had been for many years a journalist, whose versatile gifts and scholarly attainments made him a conspicuous figure in his profession. He worked perseveringly and faithfully in the interests of the school, applying himself with characteristic vigour to the printing of an abundant supply of reading matter in New York point for use in every department of the school. In a farewell letter to his pupils and ex-pupils on his retirement, Mr. Gardiner expressed the hope that the lessons in industry and punctuality, in honesty and veracity, in perseverance and optimism, which he had tried to teach by daily example, as well as by occasional exhortation, would have an influence in many lives long after he had passed away. Mr. Gardiner since his retirement from the school had devoted his time to literary pursuits, contributing special articles to the newspapers of the city where he had spent the greater part of his journalistic career.

Convention in Boston

At the convention of the Educators of the Blind held in the Perkins Institute at Boston, Mass., many interesting papers were presented and discussed. It was a happy idea of the authorities at Perkins to keep at the school a large number of the teachers and pupils to enable the visiting delegates to observe the regular routine of the school. The daily programme was carried out without variation, from the summons to rise in the morning until the close of the day. Especially interesting were the opening services in the chapel, the singing being exceptionally fine. One of the features of school life at Perkins is the mingling of the teachers and the pupils in the cottages as well as in the classrooms of the

school. In this way a sort of family life is established with all the advantages of the home. The pupils and teachers share in the responsibility of a well conducted household, a training which cannot help but be beneficial to the pupils, many of whose opportunities for such training elsewhere are limited. Much attention is given to dramatics, and several interesting plays were put on in different parts of the school by the senior and junior pupils. During the week a field day was held in which boys from the school at Overbrook, Philadelphia, competed with the Perkins pupils in a series of contests, the points being fought for stubbornly in every case. The development of the athletic spirit is an important feature in these larger American schools.

June Concert

At the closing concert in June the pupils maintained the high standard of previous years, showing to advantage in music, recitations, and dialogues. The choral work was particularly attractive, and elicited very favourable reports from the press.

PHYSICIAN'S REPORT

To The Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—I beg to forward my report as physician to the School for the Blind for the year ending October 31st, 1924.

The officers and pupils, with few exceptions, came through the year in good health. In the Autumn of 1923 there was an outbreak of scarlet fever. Six cases developed before we gained control. All made good recoveries.

During the winter our hospital was kept constantly occupied, mostly with influenza cases. All made good recoveries.

I beg to draw your attention again to our lack of proper accommodation to isolate contagious diseases. We are dependent on the Brantford General Hospital, which is not very large. Trusting that some protection may be given us in this matter,

I have the honour to be

Your obedient servant,

J. A. Marquis.

Brantford, January 20th, 1925.

DENTIST'S REPORT

To The Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—I have the honour to submit my report for the year ending October 31st, 1924.

Most of the work done for the pupils falls into three lines:

(a) Repairing teeth where decay has started.

(b) Extracting temporary teeth when they can serve no further purpose. Extracting permanent teeth that are hopelessly decayed.

(c) Placing the mouth in a clean and healthy condition.

I am pleased to report that eight girls and sixteen boys have been exceptionally diligent in attending to their teeth.

There were twenty-one girls and thirty boys whose teeth showed no sign of decay.

Twenty-three temporary and eleven permanent teeth were extracted for girls, and twenty-two temporary and fourteen permanent ones for boys.

Fifty-seven fillings were inserted for girls and one hundred and forty-one for boys.

It is very gratifying also to state that, in work which is generally trying for children and young people, the pupils without exception have been wonderfully good, which has made my work very easy.

Respectfully submitted,
J. R. Will.

Brantford, January 13th, 1925.

OCULIST'S REPORT

To The Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—I have the honour to report the results of the examination of the pupils' eyes for the year 1924.

Of the pupils who registered at the school for the first time during this year, twenty-two—thirteen male and nine female—were examined.

Condition of Sight

	Males	Females	Total
1. Without perception of light in either eye	2	2	4
2. Perception of light in one, none in the other	2	..	2
3. Perception of light in both eyes	1	..	1
4. Limited objective vision in one eye	2	1	3
5. Limited objective vision in both eyes	6	6	12
	13	9	22

Six of the nine girls have sight enough in one eye to help themselves very considerably, and also to be of assistance to those more unfortunate; while only two of the boys have a comparable degree of sight in one eye.

Quite a number of the pupils of previous years were examined. The majority showed little or no change in the degree of sight. But one boy, on whose eye I operated last year, was found to have recovered practically normal sight in that eye and will be advised to continue his education in public school.

Diseases Causing Blindness

	Males	Females	Total
Optic Atrophy	1	3	4
Retinitis Pigmentosa	3	..	3
Cataract	2	1	3
Ophthalmia Neonatorum	2	1	3
Injury of both eyes (dynamite)	2	..	2
Injury of one eye, followed by Sympathetic Ophthalmia in the other	1	..	1
Chorioiditis	1	..	1
Interstitial Keratitis	..	1	1
Keratitis (probably tuberculous)	..	1	1
Aniridia	..	1	1
Microphthalmus	..	1	1
Undeveloped Optic Nerve	1	..	1
	13	9	22

Of the twenty-two pupils six are classed as cases of preventable blindness, three from Ophthalmia Neonatorum, two from dynamite explosions (neither occupational), and one from an injury of one eye followed by Sympathetic Ophthalmia in the other.

But a large percentage of the pupils are blind from congenital conditions, over which of course there is little or no control, with the exception of one certainly, and three possibly, from the effects of syphilis in a previous generation.

A few acute conditions of the eyes required attention during the term, but none of a very prolonged or serious nature.

Respectfully submitted,
B. C. Bell.

Brantford, Ont., November 21st, 1924.

REPORT ON MUSICAL INSTRUCTION

To The Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—I have the honour to present the results of my examination of the musical work accomplished at the Ontario School for the Blind during the academic year 1923–24.

The examinations in practical knowledge were conducted on May 28th and 29th and the theoretical work on May 31st. The practical subjects included piano, organ, violin, singing and voice culture, choral class work and piano and harmonium tuning.

The theoretical subjects were: rudiments, harmony and counterpoint.

Piano—The work displayed by the several piano classes was a distinct advance on the previous year. The technique, expression and style were generally good. Several students exhibited unusual talent. In the introductory grade, two obtained first-class honours, seven honours and one a pass. In the elementary grade, four reached the first-class honour standard, two gained honours and one passed. In the primary grade, all seven pupils did well, three with first-class honours (80 per cent.), one honours and three passed. In the junior grade, eleven pupils were presented, two gained honours, seven passed and two failed. In this grade the phrasing was weak and the use of the pedal was not quite understood. In the intermediate grade, two candidates passed. The playing of three others, who are in the intermediate progressive stage, was very fair.

As before stated, the advance made in piano playing must be considered highly satisfactory, and much credit is due to the musical director (Mr. James Galloway, A.R.C.O.), to his efficient assistant, Miss E. Smyth, and to Miss Howell.

Organ—The only pupil presented for examination passed the tests very well.

Violin—Elementary grade. One candidate (a talented boy) gained first-class honours and one failed. Primary grade—Of three candidates entered, two reached the honour standard and one passed. A good result. Intermediate—One pupil who is in the intermediate progressive stage performed extremely well, displaying fine tone and good technique.

In spite of a little weakness in phrasing and technical studies, a marked improvement is apparent in the violin section as a whole. A word of praise is due to Miss Jones, L.T.C.M. for her excellent teaching.

Singing and Voice Culture—Two pupils only were presented in this depart-

ment. In the junior grade, one received honours, and in the intermediate grade, one passed.

Choral Classes—The school choral classes are progressing most favourably, under the conductorship of Mr. James Galloway. The senior class, which numbers about forty voices, is now a well-balanced and efficient organization. The junior class consists of between forty and fifty sweet, fresh young voices. It was a pleasure to listen to the singing of both classes. Their interpretation of bright, well-chosen specimens of part music, accompanied and unaccompanied, was very good. I was particularly struck with the clear enunciation and pronunciation, as well as with the tonal and expressional qualities of the singing. These young people sing with evident enjoyment and with a naturalness that is refreshing.

The hearty singing at the morning prayer service is worthy of more than passing notice. Interest is added to the service by the excellent accompaniments for organ and violin, played by two pupils of the school. This was especially noticeable in the rendering of the National Anthem, "God Save the King," with which the service begins.

Piano and Harmonium Tuning—This class, under the instruction of Mr. Ansell, is thriving splendidly. In addition to their capabilities as practical tuners, the youths in this class are able to do all kinds of repairs to a piano or harmonium. Three of a class of twelve are completing their course and will graduate this term. All the pianos in the school are tuned and regulated by the students from the training school of the O.S.B.

It is gratifying to know that former students from this school are occupying responsible positions as tuners in Ottawa, Toronto, Montreal, Hamilton, Saskatoon and other places, including Shanghai.

Theory of Music—Elementary Grade (Rudiments). The eleven students in the class were successful, seven gained first-class honours, two honours and two passed.

Junior (Harmony)—Nine wrote in this grade; three were placed in the first class, three in the honours section and three passed.

Senior Grade (Harmony and Counterpoint). Two obtained first-class honours, three honours and two passed.

The musical director is to be congratulated on the addition of counterpoint to the curriculum, and also for the splendid results of his teaching. The good teaching done by Miss Howell is apparent in the elementary theory class results.

In conclusion, I would offer sincere congratulations to the courteous Principal, Mr. W. B. Race, who is responsible for the splendid discipline and high tone of the whole school.

I have the honour to be,

Sir,

Yours obediently,

ALBERT HAM,
Mus. Doc., F.R.C.O.

561 Jarvis Street, Toronto, June 6th, 1924.

LITERARY EXAMINER'S REPORT

To The Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—Herewith I submit my report as Literary Examiner at the Ontario School for the Blind, for the academic year ending June, 1924.

Organization and Equipment

The school uses essentially the same curriculum as the Public Schools of Ontario. Mr. Cole, the Vice-Principal, teaching work of Forms IV and V; Mr. Langan the work of Form III; Miss Moffitt and Miss McGuire the work of Form II; Misses Lowry and Burns the work of Form I and Miss Patterson the Kindergarten-Primary class. Apart from the academic subjects, Mr. Donkin gives instruction in Manual Training to the boys and Miss Cooper in Sewing and Household Science to the girls. Miss Roberts gives instruction in Typewriting and Captain Clegg in Physical Training.

New seats have been placed in all the class-rooms, and some fine globes, books and other equipment added.

Entrance Class

I examined the Entrance Class, of eleven pupils, under the instruction of Mr. Cole and found them equal or superior to many Public School pupils of the same grade, due in some measure to more maturity of mind, owing to the average being about sixteen years.

The Public School Classes

These classes, under the instruction of Mr. Langan and Misses Moffitt, McGuire, Lowry, Burns and Patterson, I examined in the several subjects of the curriculum. I found the teachers and pupils interested in their work and making progress.

In Reading the pupils read with expression and understanding. The more complete the blindness the better they read.

In Spelling great accuracy is attained and the general results are very satisfactory.

In Literature the children appreciate what they read. The senior class possesses a good knowledge of Julius Caesar, in addition to selections from the reader.

In Arithmetic good progress has been made. The work that the pupils do without the assistance of a slate is of a high order due to great concentration. The new slates brought into use a year ago enable the pupils to do much more work in a given time than under the former method.

In Writing the pupils learn quickly to write Braille and point writing. With the pencil many pupils write the characteristic square hand very well indeed.

In Composition splendid written results are obtained. Many pupils possess great imaginative qualities which enter into their work. Perhaps the greater results are obtained in oral composition, in which all the pupils delight to take part and in which they do well.

In History I found great interest being taken and the pupils well versed in the more important features of English and Canadian History. In the junior classes many history stories had been read, and these were appreciated

by the pupils. This year I found that the senior classes had given considerable attention to civics, in which they were much interested.

In Hygiene the junior classes were well up in matters relating to the care of the body, value of fresh air, etc. The senior classes had covered the work in the Public School hygiene and knew it well.

In Geography a much wider course has been covered than in former years. The senior classes possessing a detailed knowledge of the commercial geography of the different countries of the world, the means of transportation, the effect of tariffs, etc.

In Nature Study the scope of the work is necessarily more limited. The pupils, however, show great interest and have secured a fund of knowledge beyond expectation.

In Manual Training and Household Science the work covered is essentially the same as for some years past. The pupils are interested in this work.

In Physical Training the new instructor, Captain Clegg, is doing fine work, the results of which are manifest in the physique of the pupils.

Notes

Principal Race is certainly getting the accommodations and equipment of the school in much better condition. The school is better graded than formerly and the pupils are interested in their work.

The staff is duly qualified and all are interested in the work. A good *esprit de corps* exists among pupils and staff.

I have the honour to be,
Sir,
Your obedient servant,

E. E. C. Kilmer.

Brantford, July 8th, 1924.

APPENDIX Y

ONTARIO SCHOOL FOR THE DEAF

ANNUAL REPORT OF THE SUPERINTENDENT

To The Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—I have the honour of submitting for your consideration the Annual Report of the Ontario School for the Deaf for the year ending October 31st, 1924.

The Attendance

The total number of pupils enrolled during the session of 1923-24 was 299, the average attendance being 290. At the close of school, twenty-eight pupils were written off, and fifteen others, from various causes, did not return. This was an unusually large number and caused a slight decrease in attendance at the reopening of school in September. The number of new pupils in September was forty, and as very few will be written off at the end of the present session, it is expected that the enrolment next session will show a very considerable increase.

Health

The health of the pupils and staff was exceptionally good during the year and, as a consequence, the work of the school did not suffer to any appreciable extent from interruptions caused by illness. The splendid sanitary condition of the building had much to do with the good health of the pupils, but the chief credit must be given to the work of the physician, the nurse and the staff, generally, who were assiduous in the attention given to the physical well-being of the pupils.

The Work of the School

The regular work was carried on during the session 1923-24 in twenty-six classes by a staff of twenty-eight teachers, two of whom did supervising and teacher-training. The result of the year's work was very satisfactory, notwithstanding that a number of untrained teachers were on the staff, their inexperience and inability being compensated for by the devotion and zeal of the experienced teachers. During the summer a number of those inexperienced teachers went off the staff and their positions were filled by two former teachers, who had been absent during the year taking the Normal Course for teachers of the deaf at Northampton, Mass., and four experienced public school teachers. At the close of school in June, four of our teachers, Miss Handley, Miss Nurse, Mr. Lally and Mr. Van Allen attended the summer course for teachers of the deaf at Northampton, Mass., and in July, Miss Ford, Miss Deannard, Miss Nurse, Miss Handley, Miss Aitchison, Miss Blakely, Mr. Lally and the Superintendent attended the convention for oral teachers, held in the Lexington Avenue School, New York City. The convention was probably one of the most useful held by instructors of the deaf, the outstanding feature being the great amount of practical demonstration work carried on during the week and the lessening of the merely theoretical. The members of the staff present felt that the convention was of very great value to them in their work.

The teaching staff, as now constituted, is made up of twenty-seven teachers, three in the manual department and twenty-four in the oral department. The teachers in the oral department are all Normal trained and, with two exceptions, have had public school experience, and all have had, or are now having, training in our special methods. In addition to the experience and training mentioned, eight have had Northampton training, and two, additional training at the Central Institute at St. Louis.

Training Course for Teachers

This year the training course for teachers has been extended and systematized, and as only teachers having normal training are engaged, it is hoped that, from now on, our teachers will have such a thorough training that they will not require, except for comparison of methods and the obtaining of new ideas, to go outside the Province.

The course is as follows:

Teachers' Training Course

1. The History of the Education, including Methods of Teaching of the Deaf.
2. Anatomy of the Vocal and Auditory Organs.
   Causes of Deafness.
   Testing of Hearing.
   Conditions of children upon entering school.
3. Psychology of the Deaf.
4. Speech Training—
   (a) Sense Training.
   (b) Gymnastics of the vocal organs.
   (c) Voice-building exercises.
   (d) Formation and Development of the elementary sounds.
   (e) Accent . . . Syllabication. Emphasis. Exercises for rhythm. Exercises for fluency. Marking words for breath and voice. Auricular work.
5. (a) Diagram of vocal organs.
   (b) Visible Speech.
   (c) Correction of Speech in Senior Grades.
   (d) Teaching of Lip-reading—Muller Walle Method.
6. Development of Language and methods of teaching the same.
7. Adaptation of methods in teaching: Arithmetic. Geography. History. Grammar. Composition. Literature. Reading.
8. Methods of developing the faculties of observation, reasoning and memory.
9. Observation of classroom work.
10. Supplementary Reading Course.

The foregoing covers a three years' course for teachers who have charge of classes in the Ontario School for the Deaf, and who have had previous training in a Provincial Normal School.

Graduation will be subject to examination on both theory and practice, by a board of examiners, and teachers' certificates will be granted to successful candidates by the Department of Education for the Province of Ontario.

The Expenditure

The expenditure for the year was $128,516.88 and that for the previous year was $139,591.53, showing a decrease of $11,074.65. The revenue for the year was $14,925.85, and that of the year previous, $16,870.67. The net expenditure for the year was $113,591.03, showing a net decrease of $9,129.83. The per capita cost for the year was $391.70 and that for 1922-23 was $423.17, showing a decrease in the per capita of $31.47 per pupil. It is not to be expected that any further material decrease in expenditure can be looked for in the near future and that the per capita cost will remain for some time about $400.00 per year.

The Farm

The operation of the school farm was carried on satisfactorily during the year. Considerable improvements have been made in re-fencing, etc., and with some further needed improvements, will bring farm conditions on a par with those of other departments.

The report of the Literary Examiner, H. J. Clarke, B.A., and that of Dr. Boyce, the Attending Physician, are hereto appended.

In concluding this report, I wish to thank you, Sir, and the Deputy Minister, Dr. Colquhoun, for the many courtesies and the willing assistance given me in the management of the school during the year.

I have the honour to be,
Sir,
Your obedient servant,

C. B. Coughlin,
Superintendent.

Belleville, November 1st, 1924.

Officers of the School

C. B. Coughlin, M.D.	Superintendent.
Hugh Wiggins	Bursar and Storekeeper.
W. W. Boyce, M.D.	Physician.
J. Chant, M.D.	Oculist and Aurist.
Miss E. A. Willoughby	Matron.

Teachers

Manual—D. R. Coleman, M.A., Teacher Emeritus; Mrs. Sylvia C. Balis, Miss Ada James, Miss Nina Brown.

Oral—W. J. Campbell, Supervising Teacher, Senior Oral Department; Miss C. Ford, Supervising Teacher, Junior Oral Department; Geo. F. Stewart, E. B. Lally, K. C. Van Allen, M. Blanchard, Miss E. Deannard, Miss V. G. Handley, Miss E. Nurse, Miss L. Carroll, Miss B. Rierdon, Miss E. Panter, Miss G. Bradley, Miss A. Aitchison, Miss M. Coffey, Miss C. Blakely, Miss M. Cass, Miss L. Churchill, Miss K. Simmons, Miss H. McTear, Miss M. Lally, Miss E. Vanderwater, Miss M. Coulter, Miss P. Van Allen.

Miss B. Sinnott	Teacher of Domestic Science and Assistant Matron
Mrs. L. G. Williams	Teacher of Sewing.
Miss K. Bawden	Clerk and Stenographer.
Alfred Burrell	Supervisor of Boys.
Miss M. Allison	Trained Nurse.
J. Spanner	Printer and Instructor in Printing.
A. Morrice	Shoemaker and Instructor in Shoemaking.
J. N. Boyd	Baker and Instructor in Baking.

LITERARY EXAMINER'S REPORT

To The Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—I beg to submit for your consideration my report on the inspection of the Literary Classes at the Ontario School for the Deaf for the year now closing.

Following your instructions, I have made a careful inspection of all the Literary Classes in the school. Owing to the fact that you were pleased to make the appointment somewhat earlier than usual, I was enabled to make what to me was a much more satisfactory inspection. I spent a week at the school before the Christmas vacation, visiting every class, and got a good idea of the amount of work covered up to that time, and a general idea of the condition of each class. Late in March I spent another two weeks among the classes, going more thoroughly into the details of the work. I was thus, for the first time since my first appointment some sixteen years ago, able to get a personal

idea of just what progress is made in a given time. The inspection this year is almost identical with that in the ordinary public schools, and as such, is much more satisfactory to me, and I trust will give you a better idea of what is going on in this school.

With this preliminary statement, I have no hesitation whatever in assuring you that excellent work is being done for these children who, by reason of a physical defect, are not capable of receiving instruction in the schools for hearing children. I saw good teaching in almost every class, much of it superior teaching. This is to be expected, if satisfactory results are to be attained, for a teacher of ordinary teaching ability will scarcely succeed here, where, from the nature of things, expert teaching is necessary. On the whole, the staff are very efficient. I would not have you to infer from this that all are equally efficient. That is not so. Some are outstanding in their work, others are good teachers, while a few are not quite so good, but all are, I believe, doing their best. In a report that is likely to appear in the printed reports it would not be wise to particularize, but a visit to the school will soon show you the outstanding members of the staff.

The curriculum of the Junior Oral Department has been thoroughly revised during the last few years, and now appears to be well suited to the needs of these children. That for the Senior Oral Department has not yet been completed in its revision, but is, I understand, nearing its completion. This will be a decided improvement in that Department.

I was particularly pleased with the proficiency manifested in the several classes, and was delighted to see the progress made in the interval between my visits, particularly in the lower classes. While the senior grades also made satisfactory progress, it is more noticeable in the little ones, who come with practically no knowledge of language. It is simply marvellous what these little tots accomplish in the time.

There are several new teachers on the staff this year, and some of the former faces are missing. The new teachers are Misses Gillanders, McDonald, Bradley, Simmons, Churchill, Cass and McTear, and Mr. Blanchard and Mr. Nagle. Miss Bryan joined the staff last September, but resigned before Christmas and was replaced by Miss McTear. In this connection, I would like to say that in my opinion, some means should be found to make the tenure of office of satisfactory teachers longer. Frequent changes of teachers are bad for any school, but here they are ruinous. An in-coming teacher, however successful in a hearing school, has a great deal to learn when she takes up this work, and is really not very valuable here until some months after she joins the staff. When they leave at the end of a year or less, the Province has scarcely received value for the salary. I am not prepared to suggest a solution, but it is worthy of serious consideration. I understand that several of the new teachers intend to leave at the end of the current session. Some of them at least are the makings of good teachers of the deaf, and it is unfortunate that they do not consider it to be their duty to remain longer. It adds materially to the work of the supervising teachers who train these teachers, and detracts from the efficiency of the school. Miss Smith, who last year assisted Miss Ford in this work of teacher-training and supervision, has returned to the United States, and her duties have been taken over by Miss Ethel Nurse, who for years has been a very successful teacher of the staff. I am pleased to note in passing that Miss Nurse and Miss Handley of the Junior Oral Department, and Mr. Lally and Mr. Van Allen of the Senior Oral Department, are now taking a course in Clarke School, Northampton, Mass.

Miss Ford, who has so ably carried on her work of supervision and teacher-training, is ever on the alert for improved methods. This year in certain classes more time has been given to rhythm work with the piano, with a view towards improving the voices of the children. The work so far has not gone far enough to justify a definite opinion as to whether or not the results will justify the time spent, but it is evident that considerable improvement has been made. They have been somewhat handicapped by the size of the piano that is available, as only half a class can stand about it at a time. Much time could be saved with a larger sized piano where the whole of the class could stand around it at the same time. The method used, as you probably are aware, is to have the class surround the piano, and with eyes closed, place their finger-tips on the piano case. They receive the vibrations by touch, and follow the time and pitch, modulating their voices with the piano, with remarkable accuracy. I was greatly interested in a demonstration of this work. They have realized for some time that the voices of deaf children are, as a rule, unsatisfactory and their speech somewhat monotonous, the monotony being due to lack of accent and inflection which all hearing persons use to indicate questions or conclusions and which is acquired by them unconsciously. These children also lack breath control, resonance and proper pitch. The problem in this new training is: how to convey musical tones to the deaf, so that they will unconsciously put into their speech some of the natural modulations that are characteristic of the voices of hearing children. By developing the proper sense of touch in relation to sound, the teacher can, in a sense, make up for the child's lack of hearing. If the child is to get any proper understanding of what voice is, he must be able to distinguish the three physical properties of sound, force, pitch and quality. This can be given to the deaf child in a degree by developing his sense of touch. Just how far this understanding can be carried remains to be seen, but from what I saw, I know that the children now under training here do have an appreciation of voice, that was not evident before.

To get a free natural use of the organs of speech is of the utmost importance and can only be secured when the body is in a state of relaxation. I am speaking of deaf children, and those who have observed them while under speech development training know that they are under considerable strain. All deaf children seem to be susceptible to rhythmical movements and to respond to them. They give them intense pleasure, hence the advantage of using the piano as a medium of conveying vibrations. The children concentrate on the vibrations of the piano, and in the pleasure they give them they relax, and in the unconscious freedom of action more natural tones are given. When the teacher plays loudly they respond with force; when she plays softly they subdue their tones. After continued drill, they are able to reproduce these. Finally, it is hoped, they will apply their sense of force and pitch to their everyday speech.

This brief outline of this new departure will give you a very meagre idea of what is being attempted. If you could make it convenient in the multitude of duties that devolve upon you as the head of this great Province to visit this school, if only for a short time, you would get a much better idea of the importance of the work than I am able to give you in a few short paragraphs.

Another new development here is the use of the moving picture for teaching purposes. While moving pictures are valuable in any school, they have an added value here. It is the unanimous opinion of the staff that the pictures add materially to the accuracy of the knowledge acquired by the pupils. They use freely, in language and composition exercises, information gleaned from the pictures. I had the privilege of reading some essays based on a picture that

had been shown a few days before I visited them, and the essays were really good. Personally, I attended one exhibition, showing the Canadian waterways. The pupils were deeply interested, and the next day could give very intelligent answers on what they had seen. Naturally the pictures are not all of a serious nature, but great care is exercised that the lighter pictures shown are proper pictures to place before the children. They have a good machine, and this work is almost entirely in the hands of Mr. Lally.

In conclusion, Sir, I wish to thank you for your confidence in appointing me to this important work, which I have now handled for some seventeen years. I also wish to thank the Superintendent and officers and teachers for their co-operation and assistance during the time spent among them.

I have the honour to be,
Sir,
Your obedient servant,

H. J. Clarke,
Inspector of Public Schools,
South Hastings, Belleville and Trenton.

Belleville, November 1st, 1924.

PHYSICIAN'S REPORT

To The Honourable G. H. Ferguson, B.A., LL.D.,
Minister of Education for Ontario.

Sir,—I beg leave to report on the health conditions prevailing at the Ontario School for the Deaf for the session of 1923-24. Altogether it has been a very satisfactory term and compares favourably with any previous year, there being an improvement in the average loss of time from non-attendance at school owing to sickness. Considering the size of the school and the large number of pupils, there have been few irregularities at classes. We have not escaped some sickness, however, and besides the ordinary types common among the children from year to year, we have had some serious cases. One little boy, after being sick for some time with abscess of liver, was removed to the Sick Children's Hospital, where he afterwards died. An outbreak of measles occurred toward the end of the school term, and interfered somewhat with classroom work. There were two cases of fractured bones, both of forearm, and both entirely recovered. We have had some pupils who are constitutionally frail or have some disability, but we manage by observation and attention to keep them at school.

Without going into details, I would here mention some of the more important cases we have had: Bronchitis, 20; la grippe, 13; pneumonia, 1; measles, 41; inflammatory rheumatism, 1; diphtheria, 3; chickenpox, 1; enuresis, 5; epilepsy, 2; asthma, 1; anaemia, 5; tonsillitis, 15; typhoid fever, 2; general debility, 10; suppuration of middle ear, 7; chorea, 1; croup, 4; abscess, 3; infected wound, 8; simple wounds, bruises and sprains, 16; a number of cases of skin diseases and gastro-intestinal disorders.

There has been very little sickness or loss of time among the teachers and staff.

I have the honour to be,
Sir,
Your obedient servant,

Belleville, November 1st, 1924. W. W. Boyce.

UNIVERSITY OF TORONTO

REPORT OF THE

BOARD OF GOVERNORS

For the year ending 30th June, 1924.

To His Honour the Lieutenant-Governor in Council:

The Governors of the University of Toronto have the honour to submit their eighteenth annual report, accompanied by the President's report upon the academic work of the University and its Colleges for the Session 1923-24, and the reports of various departments. They also append the usual statements in detail of the receipts and expenditures of the Board for the fiscal year which closed on 30th June, 1924, which have been duly audited as provided by statute.

During the year the completion of Simcoe Hall, the new Administration building, was so far advanced as to permit of the removal thereto of the various offices, which are now occupying it. While the accounts have not yet been finally closed, the cost will be, in round figures, $400,000, including furnishings and equipment, there having been expended to 30th June, $351,335.

The new wing of the Ontario College of Education was also opened. The expenditure thereon to 30th June, including furnishings and equipment, has been $344,635, and it is estimated that the total expenditure will be close to $400,000, funds for which balance are available from the grants made for the purpose.

The special Insulin grant of $25,000 received from the Government was expended in remodelling and fitting up the old Y.M.C.A. building for the work, which is now being carried on there with success.

The house on the property at the corner of College and St. George Streets, purchased last year from the Beardmore Estate, has been designated "Baldwin House" in memory of the Hon. Robert Baldwin, and the departments of History and Political Economy are now in occupation of the quarters there fitted up for them. The erection of the much needed new Forestry building on the north end of this lot has been begun since the close of the year under review.

The gross revenue for the year was $1,033,922. The deduction of interest written to Scholarship and other trust funds, $16,906, left a net revenue of $1,017,016. This figure is less than that of the previous year by $44,169, due mainly to a falling off in fees owing to reduced attendance, this item being some $42,000 less than in 1922-23. The above ordinary revenue was supplemented by the special Legislative grant of $880,000, making total available receipts of $1,897,016.

The expenditure under the appropriations for salaries and maintenance (excluding the Ontario College of Education, which is supported by a special vote) was $1,972,743. This total exceeded that of the previous year, which was $1,887,924, by $84,819; but it is less by $46,003 than the anticipated expenditure shown by the estimates prepared before the beginning of the fiscal

year. One item of increase is that of salaries, which, including pensions and retiring allowances, amounted to $1,104,527, or $19,196 more than in the previous year. There was spent upon alterations, etc., in the University College building after the removal of the executive offices $10,000, and upon alterations to Baldwin House and to the houses Numbers 69 and 71 St. George Street, to fit them up for the departments to be housed there, $15,000. In the Central Power Plant it was found necessary, on account of the load on the boilers, to erect a new chimney stack at a cost of over $52,000, of which $21,452 was provided out of unused balances from the grants for the Electrical and Anatomical buildings, the balance being charged to the accounts of the year. There was also an increase of some $8,000 in the expenditure upon University Extension and Publicity.

The total excess of expenditures over receipts was $75,727. This has been charged to the Contingent Fund created out of available balances of former years, which stood at the beginning of the year at $164,480, leaving a sum of $88,753 to meet the needs of the present year, which will probably absorb the whole amount.

All of which is respectfully submitted.

H. J. Cody,
Chairman.

Toronto, 29th November, 1924.

PRESIDENT'S REPORT

1923-1924

To the Governors of the University of Toronto:

GENTLEMEN:—

I beg to submit the following report on the academic work of the University and University College during the twelve months ended June 30th, 1924.

The total staff of the University and University College numbered 583, of whom 70 were professors, 61 associate professors, 56 assistant professors, 90 lecturers, associates (in medicine) and instructors in the College of Education, 1 director, 2 directors of field work, 303 demonstrators, fellows and instructors with sessional appointments. They were distributed as follows:

	Professors.	Associate Professors.	Assistant Professors.	Associates.	Lecturers.	Director.	Director of Field Work.	Other Sessional Appointments.
University (Faculty of Arts)	25	17	19	..	22	..	..	61
University College	11	11	7	..	5	..	..	8
Faculty of Medicine	20*	15	15	20	8†	..	..	165
Faculty of Applied Science	11	9	10	..	14**	..	..	40

Faculty of Forestry	1	3	..	..	..	..	..	1
Faculty of Music	..	..	..	..	4	..	..	..
Social Service Courses	1	..	..	..	..	..	1	9
Public Health Nursing	..	..	..	..	..	1	1	‡16
Ontario College of Education	2	4	4	..	19	..	..	..

*One also in University.
†Two also in Ontario College of Education.
**Two also in University.
‡One also in Social Service; one also in Medicine.

In Victoria College there were:

Professors	13
Associate Professors	3
Lecturers	6
Special Instructors	3

In Trinity College there were:

Professors	10
Lecturers	10

In St. Michael's College there were:

Professors	12
Lecturers	11

The following retired:

Graham Chambers, B.A., M.B., Associate Professor of Clinical Medicine; William Brown Thistle, M.D., Associate Professor of Clinical Medicine; John McGowan, B.A., B.A.Sc., Professor of Applied Mechanics. These gentlemen have given faithful and efficient service to the University for many years and carry with them the esteem of their colleagues.

The following resigned:

Wilbert Amie Clemens, M.A., Ph.D., Cornell, Assistant Professor of Limnobiology; Hugh Bethune Maitland, M.D., Assistant Professor of Pathology and Bacteriology; Arthur Wellesley McConnell, B.A.Sc., Associate Professor of Architecture.

I record with deep regret the death, on January 23, 1924, of Dr. C. K. Clarke, Professor of Psychiatry, and for twelve years Dean of the Faculty of Medicine. To no man does this province owe more in respect to the treatment and investigation of psychiatry in hospital and university; by his colleagues and former students his name is held in affectionate remembrance.

The University has suffered a severe loss in the death of Professor T. H. Black, who passed away suddenly in the fullness of his young manhood in June, 1924, and to the deep regret of students and faculty. For four years he had been professor of Roman Law and Jurisprudence. He was a fine scholar, an excellent teacher, and a man of the highest character.

Leave of absence was granted to the following:

For the Michaelmas Term:—Robert Boyd Thomson, B.A., Associate Professor of Phanerogamic Botany, to visit Africa and Australia for botanical investigations.

For the Easter Term:—Andrew Hunter, M.A., B.Sc., Edin., M.B., Ch.B., Edin., Professor of Biochemistry, to continue researches in London; Marcel Moraud, L. ès L., Paris, Associate Professor of French, owing to ill health; George Henry Duff, Ph.D., Lecturer in Botany for special research in Europe.

For the year:—John McGowan, B.A., B.A.Sc., Professor of Applied Mechanics; Samuel Beatty, Ph.D., Associate Professor of Mathematics, to lecture in the University of Wales and to study in the University of Paris.

The following new appointments and promotions were made during the year:

In the Faculty of Arts—Appointments:—Theophile James Meek, B.A., B.D., Ph.D., Chicago, Professor of Oriental Languages; Douglas Ewart Hamilton, M.A., D.Paed., Associate Professor of Greek; Eric Trevor Owen, M.A., Associate Professor of Greek, all in University College; Juan Cano, A.B., Toledo, A.M. Columbia, Assistant Professor of Italian and Spanish; Harry Warren Hilborn, B.A., Lecturer in Italian and Spanish; William John McAndrew, M.A., Lecturer in French in University College; Lester Bowles Pearson, B.A., Tor., and Oxon., Lecturer in History.

Promotions:—William Hunter Piersol, B.A., M.B., from an associate-professorship to a professorship in Histology and Embryology (also in the Faculty of Medicine); Edward Alexander Bott, B.A., from an assistant-professorship to an associate-professorship in Psychology; James Tresawna Burt-Gerrans, Phm.B., M.A., from an assistant-professorship to an associate-professorship in Electro-Chemistry; Alexander MacLean, B.A., from an assistant-professorship to an associate-professorship in Geology; Thomas Rutherford Robinson, Ph.D., from an assistant-professorship to an associate-professorship in Philosophy; John Richardson Dymond, M.A., from a lectureship to an assistant-professorship in Systematic Zoology; William Andrew Irwin, M.A., D.B., Chicago, from a lectureship to an assistant-professorship in Oriental Languages in University College; William Paul McClure Kennedy, M.A., Dublin, Oxon., Litt.D., Dublin,

from a lectureship to an assistant-professorship in History; John Wood MacArthur, A.B., Oberlin, M.A., Wabash, Ph.D., Chicago, from a lectureship to an assistant-professorship in Genetics; Gordon Cummings Patterson, M.A., from a lectureship to an assistant-professorship in Italian and Spanish; Humphrey Hume Wrong, B.A., Tor., Oxon., B.Litt., Oxon., from a lectureship to an assistant-professorship in History.

In the Faculty of Medicine—Appointments:—Frederick Grant Banting, M.D., Research Professor; Oskar Klotz, M.B., Tor., M.D., C.M., McGill, Professor of Pathology and Bacteriology; Eric Ambrose Linnell, M.B., Ch.B., M.D., Manchester, Assistant Professor of Anatomy; Alfred Harshaw Perfect, M.B., Assistant Professor of Surgery; Robert Watson Wesley, M.B., Assistant Professor of Obstetrics and Gynaecology; George Hardey Eagles, M.B., Lecturer in Bacteriology.

Promotions:—Frederick Newton Gisborne Starr, M.B., M.D., C.M., from an associate-professorship to a professorship in Clinical Surgery; James Montrose Duncan Olmsted, M.A., Oxon., Ph.D., Harvard, from an assistant-professorship to an associate-professorship in Physiology; James Crawford Watt, M.A., M.D., from an assistant-professorship to an associate-professorship in Anatomy; Frederick Arnold Clarkson, M.B., from an associateship to an assistant-professorship in Clinical Medicine.

In the Faculty of Applied Science—Appointments:—Eric Ross Arthur, M.A., B.Arch., Liverpool, Lecturer in Architecture; Walter Cameron Cruikshank Duncan, B.A. Sc., Lecturer in Electrical Engineering; Ubert Cecil Holland, B.A.Sc., Lecturer in Mechanical Engineering; George Herbert William Lucas, Ph.D., Lecturer in Chemical Engineering.

Promotion:—Henry Harrison Madill, B.A.Sc., from a lectureship to an assistant-professorship in Architecture.

In the Faculty of Household Science—Appointments:—Miss Lois Katharine Stewart, B.S., Kansas, M.S., Wisconsin, Assistant Professor of Household Science.

Ontario College of Education—Appointments:—John Hudson Mills, M.A., Queen's, and Charles Edward Phillips, B.A., Instructors.

Promotions:—George Mallory Jones, B.A., from an assistant-professorship to an associate-professorship in English and History; John Oliver Carlisle, M.A., from an instructorship to an assistant-professorship in Classics.

The total number of students registered in the University in 1923-1924 was 4,859, or apart from occasionals in Social Service, 4,627, distributed as follows:

				Men	Women	Total
Faculty of Arts				1,177	1,154	2,331
University of Toronto	178	172	350

In addition to the students in regular courses, at least 2,650 persons have been receiving instruction provided by the University through its evening classes held in Toronto, Hamilton, and other cities and towns of the Province.

The numbers examined in the different departments of the University, including those persons granted standing for Military Studies, were as follows:

Arts:		
Fourth year	344	
Third year	470	
Second year	630	
First year	657	
Teachers' Course	146	
		2,247

Medicine:		
Fifth year (five years' course)	210	
Fifth year (six years' course)	127	
Fourth year	179	
Third year	137	
Second year	107	
First year	99	
D.P.H.	2	
B.Sc. (Med.)	4	
		865
Applied Science and Engineering:		
Fourth year	165	
Third year	149	
Second year	123	
First year	124	
		561
Education		325
Forestry		42
Music		40
Graduate Studies		150
Social Service		232
Public Health Nursing		26
Law		32
Dentistry		481
Pharmacy		94
Agriculture		49
Veterinary Science		26
Local examinations in Music		12,115

The degrees conferred were:		
LL.D. (Honorary)	4	
M.D. (Honorary)	1	
D.Sc. (Honorary)	4	
Ph.D.	18	
M.A.	76	
M.D.	2	
M.A.Sc.	7	
M.Arch	2	
C.E.	3

D.D.S.	190	
B.S.A.	66	
B.V.Sc.	26	
Phm.B.	78	
D.P.H.	5	
		1,250

The number of the staff is almost the same as last year, with an increase in the sessional appointments of the Faculty of Medicine because of the large final years, and a decrease in the Faculty of Applied Science on account of the somewhat smaller registration of students.

A review of the foregoing figures of attendance will show that there was a small increase in the Faculty of Arts, large decreases in the Faculties of Medicine and Applied Science, owing to the graduation of the last of those groups of students who came in after the war, a slight decrease in Forestry, a slight increase in the Faculty of Music, a large increase in the College of Education and in the School of Graduate Studies, a decrease in the Department of Social Service, and a slight increase in the Department of Public Health Nursing.

The most noteworthy increase is found in the School of Graduate Studies. Of the 367 students registered, 87 had received their training in other universities representing every section of the Dominion of Canada, 36 held fellowships and work was undertaken in 31 different departments of study.

In the College of Education there was also an increase in the number of students, which is probably to be explained by the fact that in times of comparative depression many who would otherwise go into business turn towards teaching. Also, the scale of salaries has, of late, induced more favourable attention to teaching than formerly. These causes also account for the larger proportion of men who have been entering the Ontario College of Education in the last few years. The students of this Faculty are drawn from all over Canada, from Britain, and from the United States.

Of the 563 who entered the first year in Arts, 84, or nearly 15 per cent., failed in the work of the session; 222 were in the pass course, of whom 46, or nearly 21 per cent., failed; 341 took honours, and 38, or about 11 per cent., failed in their honour work. This indicates that on the whole, reasonably good work is being done, especially by those who have taken honour courses; but the result is also partially explained by the fact that weaker students had been eliminated by the matriculation standards.

From estimates extending over a number of years, it would appear that the percentage of those entering the first year in Arts who finally graduate is from forty-five to fifty. The loss in the later years is not altogether due to inability or indifference in regard to their academic work. Many students from one reason or another find it necessary to leave the University in order to begin to earn their living; others at entrance did not intend to continue their courses for more than one or two years; but it will always be to their advantage to have had the education, incomplete though it may have been, which they received in the University.

Of the 100 who were registered in the first year in Medicine, 8 per cent. failed, and of the 124 in Applied Science, 16, or about 13 per cent., failed. The percentage of those who completed their courses in Medicine and Applied Science estimated over a number of years is somewhat higher than in Arts, and approximately the same in the two faculties. It is of course impossible to estimate by figures the standards set by any faculty, but they indicate the way in which the standards are lived up to.

The reasonable policy and fair procedure in a university is to guard the entrance to the expensive and difficult professional courses in such a way as to prevent as far as possible later disappointment. There is good reason for believing that now in all our faculties a fair approximation exists between entrance standards and subsequent requirements, and that there is no ground for complaint of undue severity or laxity of standards.

The Faculty of Arts is the oldest and by far the largest in the University. Its relative position among the other faculties gives it a strong unifying power, so that the professional schools are not, as in some places, mere aggregations of unrelated groups, but are members of a great body, the spirit of which is determined by the primary purposes of teaching and research, the imparting and extension of knowledge, on the basis of humanistic and scientific studies. A professional school unrelated to a university is in peril of becoming, not only narrow, but simply technical; when it is a part of an institution, the atmosphere of which is determined by a company of teachers and investigators in a very wide range of studies, such as a great university fosters, it is liberalized; and those who have been trained in it have had the opportunity of intercourse with undergraduates and graduates in a great variety of courses.

The propinquity of the medical departments to those of the faculty of Arts has made possible the experiment in medical education which has been tried during the past six years. In the first three years of the medical course, options from the Arts departments are included in order that the medical student may get some tincture of a different quality of liberal education in addition to that which he will receive in his regular professional course; for a modern medical course conducted by men of genuine scientific spirit does liberalise the mind. The greatest problem in our higher education seems to me to be how we shall prepare the professional man to fill a fuller and larger place in society, how we are to broaden his human interests. The experience of the past leads us to believe that this can be done by giving him more than the mere rudiments of a liberal education before he enters upon the special professional studies. A strong faculty of Arts offers this opportunity on a generous scale, and in looking to the future one has both the hope and the confidence that in this university the professional faculties will strengthen their affinities with Arts that have been slowly growing for many years.

I have much satisfaction in stating that the report of the Librarian shows a remarkable increase in the use of the books during the last two years. In this time twice the number of students have become regular readers in the library. This is due partly to the action of professors in recommending more reading to their students, and partly to the large increase in the number of graduate students. It is noteworthy also that over six hundred graduates of the University have been granted the privileges of the library and take out books from time to time. The use of the library is one of the best indications of the character of the work that is being done in the University, and I judge by this that the quality is good. Though the number of the books is not as large as in many other university libraries of the rank of the University of Toronto, the selection in most departments has been admirably made, and there is in it the largest collection in Canada of periodicals in scientific departments and in the foreign languages. By co-operation with the Toronto Public Library and the Royal Canadian Institute, a joint catalogue has been issued, which places all the material of the city at the disposal of the student. Unfortunately the rapid rise in the cost of books, and especially in the cost of binding, has seriously interfered with the growth of the library. There is proportionately a smaller amount of money available for the purpose of books than the requirements of the University demand.

The reports of the Directors of the Department of Health for men and women show that the undergraduates are in a very sound condition physically, 99.2 per cent. being fit to take physical exercise. The value of compulsory training is appreciated, corrective work to the extent of 6 per cent. indicates improvement in those previously examined, and in not a few instances detection of incipient disease or weaknesses has prevented greater trouble. In general, the athletic side of university life is both prosperous and healthy. The ideals of good sportsmanship are being maintained and through the inter-faculty and inter-collegiate contests a large number enjoy open-air games. Unfortunately, the space for women's athletic activities both in buildings and in the open air is quite inadequate. It is to be hoped that soon some further provision can be made.

The Extension work is developing very rapidly, and in addition to the numbers already referred to as members of evening classes several thousands have attended the occasional lectures given in many localities.

At the British Empire Exhibition held at Wembley, the University has been brought to the attention of the English public through a series of photographs

and by other information arranged by Mr. W. J. Dunlop. The exhibit of Canadian universities will have served to show those who have some intention of making their home in Canada the opportunities for higher education offered in this country.

By the removal of the administrative offices into Simcoe Hall, University College has been given, for its almost exclusive use, the historic building which has been its home for sixty-five years. The changes which have been thereby made possible should result in a stronger realization of its own individuality, and in a larger opportunity for the creation of the type of education within the University which has always given the college its distinction.

As a part of the same policy the Departments of History and Political Economy have been removed from what was called the Main Building and have been placed in a house by themselves to which the name Baldwin, in memory of the Honourable Robert Baldwin, has been attached. This transfer not only gives these departments better accommodation but, associated as they are, it brings them into close proximity, and signifies as well that they are non-collegiate, and are related alike to all the Colleges of the University.

Psychology has also been transferred from the Main Building into the houses formerly occupied by the Department of Political Economy, and though the laboratory space in these houses is not all that could be desired, yet this department will have more space, and its removal has left several smaller rooms which will be put into immediate use by the staff of University College hitherto very much overcrowded.

A useful addition was made to the Faculty of Applied Science. The Department of National Defence, recognizing the importance of maintaining the Aerodynamics Laboratory, the only one of its kind in Canada, and of continuing its work, granted to the University through the Honorary Advisory Council for Industrial and Scientific Research five thousand dollars toward the erection of a suitable building for housing the wind channel, in return for the continuance of such facilities as had heretofore been available to the Department. The offer was accepted by the University and the building completed, the additional cost over and above that of the grant being borne by the University.

The excellent character of the University schools is being maintained, and the appreciation of the public is shown in the applications for entrance, which are far greater than can be met. The addition to the building containing swimming-pool and gymnasium means much for the efficiency of both schools and faculty, but it has made further inroads into the space that was set aside for playgrounds. Steps should be taken as soon as possible to afford better provision for out-of-door exercise and sport in these otherwise splendidly equipped schools.

There has been a remarkable growth in the Connaught Laboratories in the ten years that have elapsed since their establishment, and the aims with which they were opened have been amply realized up to the present. The laboratories began with five full-time and two part-time appointments; to-day fifty-two persons are giving their full-time and four part of their time to this work. Researches have been undertaken into the etiology, the prevention and treatment of scarlet fever and into the serology of tuberculosis.

The manufacture of Insulin has also been taken over by these laboratories, and great advance has been made in purifying and increasing the yield, so that the cost to the average patient is less than twenty cents a day, or one-fifth of what it was eighteen months ago.

The Insulin Committee has been extending the use of Insulin throughout the world, and has been successful in controlling the quality and price of the out-

put by securing trade-marks and patents in many countries, and in others by transferring them to trustworthy representatives who will carry out the aims of the University. It has been a difficult piece of work, partly because there were no precedents for the policy adopted by the University, but happily the results have been good, and the Governors may have the satisfaction of knowing that the great discovery made in its laboratories has been of incalculable benefit at very low cost to sufferers in every part of the world.

The preparations for the visit of the British Association and of the International Mathematical Congress, which met here early in August 1924, occupied a great deal of the attention and energy of a large number of our staff, and they were all but completed before the end of the academic year. Though the meetings themselves were held shortly after its close, reference may be made to them in this report, while the interest is still keen, rather than to defer it for a year. These two gatherings brought to Toronto the largest number of scientists of international reputation who have ever visited Canada. The meeting of the British Association was particularly well attended, and owing especially to the indefatigable efforts of Professor Fields, a very representative body of European mathematicians came to the Congress. Universal expression of satisfaction was given by the visitors at what they found here in the way of university equipment, as well as in the standards of work and accomplishment of our scientific departments. Many contributions were made by members of the staff to the programmes of the sections, and the stimulus that they have received from the discussions and by coming into personal relations with representatives of science from Britain and Europe will mean much for the University. Such gatherings could not have been held had there not been in this institution a large number of men, and among them not a few of the junior members of the staff, of high quality who by their outlook, their ruling interest and their intelligence prepared for, participated in, and helped to carry these meetings to a successful conclusion.

The large number and great variety of publications issued by members of the staff afford gratifying evidence of the extensive interest in research that prevails in the university.

During the year several distinctions have come to members of the staff. Among others, the Nobel Prize to Professors Banting and Macleod, the Hunterian lectureship in the Royal College of Surgeons in London to Dr. W. E. Gallie, and a position on the International Health Board of the Rockefeller Foundation to Professor J. G. Fitzgerald.

A special convocation was held on November 26 for the conferring of the honorary degree of Doctor of Science upon Professors Banting and Macleod on the occasion of the award to them of the Nobel Prize, and thereafter the Governors gave a banquet in Hart House in their honour, to which representatives of the medical profession from various sections of the Province were invited.

The following special lectures were delivered:

A series of fourteen lectures on "Applications of Modern Physics to Astronomy" by Professor H. N. Russell of Princeton University; a series of ten lectures, five in English, on "Studies in Shakespearean Technique," and five in French, on "Etude psychologique du peuple français" by Professor Albert Feuillerat of the University of Rennes, France; a series of twelve lectures on "The Races of the World," by Sir Bertram Windle, Lecturer in Ethnology in the University of Toronto; three lectures on "The Theory of Atomic Structure including the Correspondence Principle," by Professor Niels Bohr of Copenhagen; one lecture on "Conditions in the Near East," by Count Albert Apponyi, of Hungary; and

one lecture on "The Influence on the development of sex of the ductless glands other than those of reproduction," by Professor A. Biedl, of Prague.

Dr. F. A. Mouré, the University organist, gave during the year a successful series of organ recitals fortnightly, beginning early in October and finishing early in March.

During the past year the University has been the recipient or has had the announcement of some extremely handsome benefactions. The two largest of these were a bequest in the will of the late E. C. Whitney, Esq., a Governor and former benefactor of the University, which will bring over $400,000, and the offer of $650,000 from the International Health Board of the Rockefeller Foundation, for the erection of a building for a School of Hygiene and for the development of the Department. In addition, the following were received: Payment in full of grant by Rockefeller Foundation to University for Faculty of Medicine (including premium and interest), $1,148,901.20; Eaton Endowment (annual payment), $25,000; Nipissing Mining Company Limited, for Research Fellowship (including interest), $20,550; Graduate Fellowships: Sir Edmund Osler, $1,000; Colonel R. W. Leonard, $500; Imperial Oil Company, $500; Sir Edward Kemp, $500; Canadian Pacific Railway, $1,500; Carnegie Corporation for Research in Physics, $2,553.12; Dr. R. A. Reeve, Bequest and Prize in Medicine, $2,230; Ontario Hockey Association, "War Memorial Scholarship," $2,000; Hollinger Consolidated Gold Mines, Limited, for Research Fellowship, $1,200; Allan Rudyard Crawford Scholarship, University Schools, $500; Robert Bruce Bequest for Scholarships and Bursary, $236.77; Boiler Inspection and Insurance Company, Scholarship in Mechanical Engineering $150; Women's Mining Association, Prize in Geology, $150; McCaul Scholarship in Classics, G. A. H. Fraser, Esq., $25.59, Principal M. Hutton, $25, A. M. Stewart, Esq., $25; University College Alumnae for Prize in English, $10.

The contents of the Royal Ontario Museum have been enriched through additions to the George Crofts Chinese collection, and by the results of University expeditions to the Red Deer River, as well as by many other gifts and purchases.

On June 5, the Soldiers' Tower was dedicated with a very impressive ceremony. Few, if any, nobler memorials have been erected anywhere, and it will signalize for centuries the devotion of graduates and undergraduates to their country and the cause of humanity. Further loans were made last year to soldier students which brought up the total to $164,136.79, granted in five years to 539 persons. Hereafter the loans will practically cease, and a system of scholarships will in accordance with the original purpose be established. The members of the Alumni Federation deserve the thanks and congratulations of the University on having dispensed so worthily the $350,000 which they raised to commemorate the services of their fellows.

In closing this report I cannot but refer to the fact that during the year we have had to mourn the death of two Chancellors of the University, Sir William Meredith and Sir Edmund Walker. These gentlemen, each in his own way, rendered invaluable services to the University. It was fortunate that during the period of great expansion and of the testing of the new constitution, the University was served by these two gentlemen with such eminently wise counsel and tried devotion.

All of which is respectfully submitted.

ROBT. A. FALCONER,
President.

November 3rd, 1924.

APPENDIX I.

Balance Sheet, 30th June, 1924

Funds and Liabilities

General Endowments Fund	Schedule	1	$8,211,168 92

				$11,127,114 75

Note.—This statement does not include any assets or liabilities of the Toronto Conservatory of Music.

SCHEDULE 1.

General Endowments Fund.

Additions for 1923-24:			
Capital grant received from the Legislature:			
Ontario College of Education building		$165,000 00	
Convocation Hall advance:			
Restoration from proceeds of wild lands sales, eighteenth instalment		926 19	
Annuity debentures:			
Portion of 1923-24 instalments reducing principal:			
Fifteenth instalment, issue of July, 1909	$9,111 02		
Thirteenth instalment, issue of January, 1911	2,188 00		
Thirteenth instalment, issue of January, 1911	5,048 00		
Ninth instalment, issue of April, 1915	1,460 89		
		17,807 91	
Surveying Practice Camp, Lutterworth township:			
Valuation of buildings and equipment provided since purchase	$10,000 00		
Additional land purchased, 94 acres, at cost	650 00		
		10,650 00	
Building, No. 200 College Street, expenditure upon alterations		12,000 00	
Buildings, Nos. 69 and 71 St. George Street, expenditure upon alterations		3,000 00	
Building, No. 6 Queen's Park, further payment upon purchase		586 19	
Building, No. 8 Queen's Park, ninth of ten instalments paid on purchase		750 00	
Building, No. 100 Queen's Park, sixth of ten instalments paid on purchase		720 00	
Building, No. 184 College Street, eighth of ten instalments paid on purchase		500 00	
Building, No. 86 Queen's Park, third instalment paid on purchase		5,000 00	
Library proper:			
Additions for year, less depreciation (Schedule 7)		17,927 57	
			$234,867 86

Contra

Wycliffe College lease, surrender of six-foot strip; capitalized value of 1,252 square feet, transferred from Leased Properties to Site Lands account at 40 cents per square foot, $500.80, balance written off	$3,499 20	
Reduction in amounts previously entered for the following buildings, to adjust at exact cost:		
Anatomical	17,611 63	
Electrical	3,300 11	
University College Women's Union	540 81	
		$24,951 75
		$209,916 11
Return of 30th June, 1923		8,001,252 81
Return of 30th June, 1924		$8,211,168 92

SCHEDULE 2

Specific Endowment Funds

(Scholarships, Prizes, etc.)

A. A. A. S. Scholarship (Physics, etc.)	$2,350 00
Aggett, Harvey, Memorial (Applied Science)	1,575 22
All Souls' Historical Essay Prize	2,397 20
Balmer, Jean (Science)	1,145 68
Bankers' (Political Science)	1,200 00
Blake (Matriculation)	31,198 72
Blake (Science and Moderns)	3,750 00
Board of Trade (Commerce and Finance)	83 00
Boiler Inspection and Insurance Company (Applied Science)	150 00
Booth (University Schools)	1,000 42
Brown, George, Memorial (Medical Science)	5,391 72
Brown, George (Modern Languages)	1,128 34
Bruce, Robert	236 77
Chappell, Walter F., Prize (Medicine or Surgery)	639 46
Cockburn, G. R. R. (Greek)	1,050 00
Crawford, Allan Rudyard (University Schools)	500 00
Dickenson, Marion E. (Household Science)	4,673 20
Fulton, Alexander T. (Mathematics and Science)	3,351 30
Gibson (Pass Matriculation)	4,562 90
Gibson (Matriculation)	2,904 15
Graduate Fellowships (Sundry)	2,625 00
Hardie, William (Matriculation)	2,200 00
Jardine Memorial Prize (English Verse)	100 00
Khaki University Memorial	1,845 86
Lyle Medal (Orientals)	441 82
McCaul Medal (Classics)	490 90
McCaul Scholarship (Classics)	4 24
McCharles, Æneas, Bequest	13,053 04
McCrae, John (Matriculation)	11,423 83
McPhedran, Alexander, Research Fellowship (Medicine)	22,792 54
Macdonald, John (Philosophy)	2,080 00
Mackenzie, Alexander, Memorial (Political Science)	17,742 60
Mackenzie, J. J., Fellowship (Pathology)	5,369 42
Marfleet, Pearson Kirkman, Lectureship	6,419 10
Mathematics Scholarship (Beatty and Pounder)	100 00
Menorah Prize (Jewish History, etc.)	50 00
Mickle, Charles, Fellowship	28,160 00
Mickle, Ellen, Fellowship	28,017 13
Moss (Classics)	2,000 00
Mulock, Mary (Classics)	2,838 74
Mulock, William (Classics and Mathematics)	2,000 00
Nesbitt, Wallace, Medals (University Schools)	521 10
Nipissing, Research Fellowship (Mining)	20,550 00
Ontario Hockey Association, War Memorial (Matriculation)	2,000 00
Peters, George A. (Surgery)	3,300 00
Porter, T. M. (University Schools)	5,000 00

REPORT

RELATING TO THE REGISTRATION OF

BIRTHS, MARRIAGES AND DEATHS

IN THE

PROVINCE OF ONTARIO

FOR THE

YEAR ENDING 31st DECEMBER

1924

(BEING THE FIFTY-FIFTH ANNUAL REPORT)

PRINTED BY ORDER OF

THE LEGISLATIVE ASSEMBLY OF ONTARIO

ONTARIO

TORONTO

Printed and Published by Clarkson W. James, Printer to the King's Most Excellent Majesty

1926

PRODUCED BY
The United Press

TORONTO
CANADA

To His Honour the Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

I herewith beg to present for your consideration the Fifty-fifth Annual Report of the Registrar-General, relating to the Registration of Births, Marriages and Deaths in the Province of Ontario, during the year 1924.

Respectfully submitted,

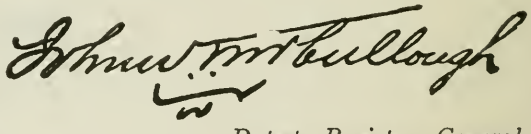
LINCOLN GOLDIE,
Registrar-General of Ontario.

SIR:—

I have the honour to submit for your approval the Fifty-fifth Annual Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1924.

I have the honour to be, Sir,

Your obedient servant,



Deputy Registrar-General.

TO THE HON. LINCOLN GOLDIE,
Registrar-General of Ontario.

REPORT UPON

Births, Marriages and Deaths

FOR THE YEAR 1924

Herewith is presented the Fifty-fifth Annual Report of Vital Statistics for the Province of Ontario.

POPULATION

The estimated population for 1924 is 3,062,150. The population was distributed as follows:

City municipalities	1,231,036 or 40.2%
Towns of over 5,000 population	163,822 or 5.4%
Rural (including towns and villages under 5,000 population)	1,667,292 or 54.4%

BIRTHS

	1924	Ratio	1923	Ratio
Entire Province	71,510	23.3	70,056	23.1
Cities	30,857	25.0	30,334	24.9
Towns	5,071	30.9	4,911	30.3
Rural	35,582	21.3	34,810	23.1

There was a numerical increase of 1,454, which more than offset the decrease of 1,264, which was the decrease in 1923 over 1922. Indeed both the number of births and the rate were the lowest in the five-year period, 1920-1924.

For the decade 1915-1924, the number and ratio per 1,000 of population were as follows:

Year	Births	Ratio	Year	Births	Ratio
1915	67,032	24.9	1920	72,511	25.1
1916	65,264	23.9	1921	74,152	25.3
1917	62,666	22.6	1922	71,320	23.9
1918	64,729	23.0	1923	70,056	23.1
1919	62,774	22.0	1924	71,510	23.3

There were 36,582 male births and 34,928 female, being 104.6 males to 100 females or 51.1% males and 48.9% females.

NATURAL INCREASE PER 1,000 OF POPULATION

Year	Births	Deaths	Natural Increase	Ratio	Year	Births	Deaths	Natural Increase	Ratio
1915	67,032	33,294	33,738	12.5	1920	72,511	40,440	32,071	10.7
1916	65,264	35,580	29,684	10.9	1921	74,152	34,551	39,601	13.5
1917	62,666	33,284	29,382	10.6	1922	71,320	34,034	37,286	12.5
1918	64,729	43,038	21,691	7.7	1923	70,056	35,636	34,420	11.4
1919	62,774	34,010	28,764	10.0	1924	71,510	33,078	38,432	12.5

In the New Zealand official Year Book, 1925, appears a table showing that in the matter of natural increase, Ontario is exceeded by South Africa, Australia, New Zealand, Uruguay, Netherlands, Denmark and Norway, and exceeds the rate of United States registration area, Jamaica, Japan, Scotland, England (and Wales), Chile, Ceylon, Sweden, Northern Ireland, Spain, Switzerland, Bulgaria, Portugal, Finland, Germany, Belgium, Italy and France, in the order named.

Canada	1922	22.1
Ontario	1924	23.1
United States	1923	22.4
England and Wales	1924	18.8
Scotland	1923	22.8
South Africa	1923	27.6
Australia	1923	24.5
New Zealand	1923	23.0
France	1923	18.7

BIRTHS BY AGES OF PARENTS IN THE PROVINCE OF ONTARIO, 1924.

| Ages of Fathers | Totals | AGES OF MOTHERS. | | |

| | | |

BIRTHS BY AGES OF PARENTS

There were more babies born to fathers of twenty-nine years and to mothers of twenty-eight years than any other ages. The peak-age group of the mothers might be expected to fall in the earlier years and, indeed, the 24 year group is a close second. In the illegitimate births, however, the 18 year group holds the largest number of births. The five years, 17-21, account for practically 49% of all such births. (See table on page 6.)

ILLEGITIMATE BIRTHS

There were 1,717 such births in 1924, giving a ratio of 24.2 per 1,000 living births, being 1.7 higher than the rate for 1923.

Year	Males	Females	Total	Rate	Year	Males	Females	Total	Rate
1915.....	761	711	1,472	21.9	1920.....	766	727	1,493	19.7
1916.....	672	693	1,365	20.9	1921.....	796	796	1,592	21.5
1917.....	645	579	1,224	19.5	1922.....	823	687	1,510	21.2
1918.....	726	637	1,367	18.2	1923.....	840	739	1,579	22.5
1919.....	634	607	1,241	19.8	1924.....	923	794	1,717	24.2

Mean rate for the decade, 20.94 per 1,000 living births.

In one year only of the decade, 1916, did the female births exceed the male, and in 1921 they were even.

MULTIPLE BIRTHS

There were 1,588 twins born, 793 boys and 795 girls. Of the 24 triplets, making 8 cases, 14 were boys and 10 girls.

STILL-BIRTHS

There were 2,594 still-born children registered as births and 2,648 as deaths. Theoretically they should be the same but it has proven to be impossible, so far, to have all still-births registered as births and as deaths.

A study of the table following shows a lessening difference in the numbers. This is owing to the policy of the Department to "keep everlastingly at it" in trying to procure 100% registration of births.

Year	As Births	As Deaths
1915	2,246	2,807
1916	2,055	2,518
1917	1,425	2,486
1918	2,198	1,339
1919	2,091	2,463
1920	2,495	2,868
1921	3,234	3,046
1922	3,115	2,946
1923	3,028	2,960
1924	2,594	2,648

MARRIAGES

	1924	Ratio	1923	Ratio
Entire Province	24,038	.. 7.8	24,842	.. 8.2
Cities	13,661	.. 11.0	14,421	.. 11.9
Towns	1,714	.. 10.4	1,780	.. 11.0
Rural	8,663	.. 5.1	8,641	.. 5.2

There was a decrease of 804 marriages during the year. This may have been and likely was due to the economic conditions which prevailed in 1924. The Department was aware of a large eflux of native sons and daughters to the U.S.A. by the demand for birth certificates for passport purposes. The reason for the unprecedented demand as given by applicants was that, no work being obtainable here, they were emigrating.

MARRIAGES BY AGES

This table found farther on in the report shows the ages of the contracting parties. It shows that there were more women married at the age of 19 years than any other individual age, viz., 2,319. The largest number of men at one individual age was 1,971 at 21 years. In 1923 the largest individual ages for the women and the men were 21 years. There were 26 men under 18 years who married and 878 women. There were 4 bridegrooms over 80 years and one bride over 75 years.

MARRIAGES BY DENOMINATIONS

A study of this table reveals a decided tendency for men and women to marry consorts of their own religious inclination or denomination.

There is always an interest displayed regarding mixed marriages, so-called, and usually thought of as a marriage between a Roman Catholic and one professing another faith. These tables show that of the 9,146 Roman Catholics who married during the year, 7,852 or over 85% married one another. Of those who went outside their own faith for partners, 583 were men and 711 women. This denomination has maintained about this proportion for many years.

Another form of mixed marriage is the Jew with the non-Jew or Christian. Of the 800 Hebrews who married, 778 or 97.25% intermarried. Of the small balance who married out of their faith, 15 were men and 7 women, thus reversing the order as compared with the Roman Catholics.

DEATHS

During the year there were registered 33,078 deaths. This was 2,558 fewer in number than those registered in 1924. The death rate also fell by 1.0 per 1,000 of population.

DEATHS

	1924		1923	
	Deaths	Ratio	Deaths	Ratio
Entire Province	33,078	10.8	35,636	11.8
Cities	13,997	11.3	15,013	12.3
Towns	2,349	14.3	2,478	15.3
Rural	16,732	10.0	18,145	11.0

DEATHS AND RATE PER 1,000 OF POPULATION FOR TEN YEARS

Year	Deaths	Ratio	Year	Deaths	Ratio
1915	33,294	12.3	1920	40,440	14.0
1916	35,580	13.0	1921	34,551	11.8
1917	33,284	12.0	1922	34,034	11.4
1918	43,038	15.3	1923	35,636	11.8
1919	34,010	11.9	1924	33,078	10.8

Mean rate, 12.43.

The mean rate is higher than normal owing to the influenza epidemics of 1918 and 1920.

The following table shows the ten highest causes of death for a decade.

TEN HIGHEST CAUSES OF DEATH IN EACH YEAR PER 100,000 OF POPULATION

(The number may be found in Table 10 for the current year)

(For Ten Years)

	1915	1916	1917	1918	1919	1920	1921	1922	1923	1924	No. Deaths
Apoplexy	51.2	53.5	52.3	53.2	54.7	48.1	53.0	53.2	51.2	44.8	1,372
Bright's disease	40.3	36.7	36.0	38.2	32.3	33.8	33.4	32.1	39.4	42.6	1,306
Broncho-pneumonia	23.9	31.9	27.9	35.5	25.2	34.0	30.2	33.9	37.2	26.5	822
Cancer	71.6	72.6	79.3	75.5	76.9	85.1	88.2	87.5	90.0	95.8	2,946
Diseases of the arteries	44.8	43.4	46.8	52.2	45.7	64.8	62.2	91.8	70.3	80.1	2,455
Infantile diarrhoea	43.0	43.9	23.9	30.1	34.0	53.6	44.9	31.8	22.8	21.1	659
Paralysis, unspecified	19.0	21.5	19.1	.....	.....	.....	.....	.....	.....	.....	.....
Influenza	.....	.....	.....	262.2	88.8	113.1	.....	22.0	69.2	18.0	554
Pneumonia	84.9	105.6	99.7	166.5	82.9	91.6	72.3	71.3	64.5	49.3	1,510
Tuberculosis	89.2	92.3	88.9	90.0	78.0	78.7	73.4	66.3	65.6	59.5	1,823
Organic heart disease	102.4	120.1	116.0	129.5	114.1	109.5	96.1	126.0	142.0	112.4	3,442
Diphtheria	.....	.....	.....	.....	.....	.....	22.2	.....	.....	.....	.....

Of the above ten causes there has been a falling off in the rate of seven, the greatest reduction appearing in that of influenza, where the drop was from 69.2 in 1923 to 18.0 in 1924. There were increases in the rates in three cases, viz., Bright's disease, cancer and arterial diseases, there being an increase of 14% in the rate, which rose from 70.3 to 80.1. Cancer as usual, shows an increase.

TUBERCULOSIS

Deaths registered as from tuberculosis were 1,823, being a decrease of 166 and a reduction in the rate of 6.1 per 100,000 of population.

DEATHS IN ONTARIO FROM TUBERCULOSIS BY AGES, 1915–1924.

Year.	Total	Ratio per 100,000.	Under 5 years.					5-9	10-14	15-19	20-29	30-39	40-49	50-59	60-69	70-79	80 and over.	Not stated.	Total deaths from all causes.

ORGANIC HEART DISEASES

As a cause of death, the organic heart diseases hold first place. It is demanding attention. The rate is to-day higher than that of any other individual disease, being 112.4 per 100,000 of population.

CANCER

In 1924 there were registered 2,946 deaths from cancer, being an increase of 222 in the number and 5.8 in the rate, which is now at 95.8 per 100,000 of population. The greatest number of deaths occurred in the 60-69 age group, when 29.3% of deaths occurred. The 70-79 age group followed next, and then the 50-59, these three groups taking a toll of 74% of all deaths from cancer. Deaths from cancer of the stomach took 34.7%, cancer of the breast, almost entirely confined to women, and of the female genital organs took 21.7%. There were fewer than 20% unspecified because of the greater interest taken in the combat against the disease and in the better inquiry instituted by the vital statistics branch.

It is interesting to compare the numbers of deaths by sex. Of the 162 deaths from cancer of the buccal cavity, 82.7% were males and 17.3% females; in cancers of stomach and liver, peritoneum, intestines and rectum and unspecified, there is not such a difference, the comparison being as 54.7 is to 45.3, the males predominating. But in cancer of the skin the males far exceed the female deaths, the ratio being 70.5% to 29.5%. On the whole the ratio was 45 males to 55 females.

	Males	Females
Cancer of the buccal cavity	134	28
" " stomach and liver	571	452
" " peritoneum, intestines and rectum	225	237
" " female genital organs	...	323
" " breast	9	311
" " skin	60	25
" " unspecified organs	328	243
	1,327	1,619

The following table gives the number of deaths for each 100,000 of population for a decade, showing the classification.

	1915		1916		1917		1918		1919		1920		1921		1922		1923		1924

COMMUNICABLE DISEASES

Among deaths from the communicable diseases there is a falling off in the death rate in typhoid fever, whooping cough and influenza, a slight rise in diphtheria and smallpox, a decided increase in measles, while scarlet fever remains stationary. Influenza as a cause was considerably lower but still higher than in 1917.

COMMUNICABLE DISEASES

	1920		1921		1922		1923		1924	
Typhoid	203	7.0	213	7.2	179	6.0	238	7.9	109	3.5

INFANT MORTALITY

There was a decrease in the number of deaths and the rate among children under twelve months of age, the rate falling from 84.9 in 1924 to 75.7 in 1925, the lowest rate ever experienced by the Province.

TABLE

Showing Total Deaths by Individual

CAUSES OF DEATH.	Total.	Algoma.	Brant.	Bruce.	Carlton.	Cochrane.	Dufferin.	Elgin.	Essex.	Frontenac.	Grey.	Haldimand.	Haliburton.	Halton.	Hastings.	Huron.
75B. Others under this title	60	...	...	1	...	...	...	...	3	...	1	1	...	...	2	3
76. General paralysis of the insane	27	...	...	...	...	...	...	...	...	2	...	...	...	...	1	...
77. Other forms of mental alienation	69	...	...	1	1	...	...	1	...	3	1	1	...	...	1	3
78. Epilepsy	73	1	1	3	...	1	2	1	2	2	2	...	...	1	...	2
79. Convulsions (non-puerperal, 5 years and over)	3	...	...	...	...	...	...	...	...	...	...	...	...	...	1	...
80. Infantile convulsions (under 5 years of age)	98	3	1	4	1	2	...	1	1	2	2	2	...	1	3	3
81. Chorea	5	...	...	...	...	...	...	1	1	...	...	...	...	...	...	...
82. Neuralgia and neuritis	15	1	1	1	...	...	...	...	1	...	2	...	...	...	...	1
83. Softening of the brain	17	1	1	1	1	...	...	2	...	...	1	...	...	...	...	2
84. Other diseases of the nervous system	51	1	1	4	2	...	...	3	1	...	3	...	2	1	1	2
85. Diseases of the eye and annexa	6	...	...	...	...	...	...	1	1	...	...	...	...	...	...	...
86. Diseases of the ear and of the mastoid process, total	17	1	...	...	...	2	...	...	2	1	...	...	...	...	...	...
86A. Diseases of the ear	6	...	...	...	...	...	...	...	1	...	...	...	...	...	...	...
86B. Diseases of the mastoid process	11	1	...	...	...	2	...	...	1	1	...	...	...	...	...	...
CLASS IV.—DISEASES OF THE CIRCULATORY SYSTEM.																
Total	3,567	38	58	110	80	32	50	81	108	46	121	48	10	50	96	114
87. Pericarditis	15	...	...	...	...	...	...	...	...	1	3	...	...	...	...	...
88. Endocarditis and myocarditis, total	67	...	1	3	1	3	1	2	3	...	3	...	...	...	3	1
88A. Acute endocarditis	34	...	...	2	1	2	1	1	1	...	1	...	...	...	1	1
88B. Acute myocarditis	33	...	1	1	...	1	...	1	2	...	2	...	...	...	2	...
89. Angina pectoris	219	2	2	7	6	1	6	13	9	5	4	1	1	3	8	6
90. Other diseases of the heart, total	1,920	30	34	73	42	20	21	46	53	19	77	23	6	20	53	69
90A. Valvular disease	503	2	6	17	6	6	1	9	16	6	29	4	...	2	12	17
90B. Fatty degeneration of the heart	22	1	...	...	1	1	...	1	1	...	...	...	...	...	1	...
90C. Aortic insufficiency	47	...	1	1	...	...	1	3	1	...	...	1	...	...	3	2
90D. Chronic endocarditis	326	8	4	10	10	4	5	5	6	8	9	6	1	2	8	13
90E. Chronic myocarditis	610	11	15	27	16	4	9	13	21	5	20	10	...	11	13	17
90F. Others under this title	412	8	8	18	9	5	5	15	8	...	19	2	5	5	16	20
91. Diseases of the arteries, total	1,316	5	19	25	31	7	21	18	42	21	33	24	3	27	32	37
91A. Aneurysm	16	...	...	1	...	...	1	1	1	...	...	...	...	...	1	...
91B. Arteriosclerosis	1,297	5	19	23	31	7	20	17	41	21	32	24	3	27	31	37
91C. Other diseases of the arteries	3	...	...	1	...	...	...	...	...	...	1	...	...	...	...	...
92. Embolism and thrombosis (not cerebral)	10	...	2	...	...	1	...	2	...	...	...	...	...	...	...	...
93. Diseases of the veins (varices, haemorrhoids, phlebitis, etc.)	10	1	...	1	...	...	...	...	1	...	...	...	...	...	...	1
94. Diseases of the lymphatic system (lymphangitis, etc.)	2	...	...	...	...	...	1	...	...	...	...	...	...	...	...	...
95. Haemorrhage without specified cause	3	...	...	1	...	...	...	...	...	...	...	...	...	...	...	...
96. Other diseases of the circulatory system	5	...	...	...	...	...	...	...	...	...	1	...	...	...	...	...
CLASS V.—DISEASES OF THE RESPIRATORY SYSTEM.																
Total	1,498	32	28	39	28	44	17	30	49	13	51	16	5	26	54	44
97. Diseases of the nasal fossae and their annexa	4	...	...	...	1	...	...	1	...	...	...	...	...	...	...	...
98. Diseases of the larynx, total	31	...	1	3	1	2	...	...	1	...	...	...	...	...	2	...
98A. Laryngismus stridulus	4	...	...	...	...	1	...	...	...	...	...	...	...	...	...	...
98B. Laryngitis	9	...	1	...	1	1	...	...	...	...	...	...	...	...	...	...
98C. Croup	15	...	...	3	...	...	...	...	...	...	...	...	...	...	1	...
98D. Other diseases of the larynx	3	...	...	...	...	...	...	...	1	...	...	...	...	...	1	...
99. Bronchitis, total	129	4	5	5	3	3	1	...	2	1	4	2	...	1	5	1
99A. Bronchitis, acute	56	3	2	1	2	...	...	...	1	...	2	...	...	...	3	...
99B. Bronchitis, chronic	34	1	3	2	1	3	1	...	...	...	2	1	...	1	2	...
99C. Broncitis, not otherwise defined, under 5 of age	7	...	...	...	...	...	...	...	...	...	...	...	...	...	...	...
99D. Bronchitis, not otherwise defined, 5 years and over	32	...	...	2	...	...	...	...	1	1	...	1	...	...	...	1
100. Broncho-pneumonia, total	359	11	8	7	5	18	4	7	6	2	7	2	2	11	9	20
100A. Broncho-pneumonia	348	11	8	6	5	18	4	7	6	2	7	2	2	11	9	18
100B. Capillary bronchitis	11	...	...	1	...	...	...	...	...	...	...	...	...	...	...	2
101. Pneumonia, total	778	14	11	15	15	18	8	19	34	8	29	12	3	11	29	16
101A. Pneumonia, lobar	314	5	2	6	8	8	3	9	11	4	12	3	...	4	8	11
101B. Pneumonia, not otherwise defined	464	9	9	9	7	10	5	10	23	4	17	9	3	7	21	5

To His Honour Henry Cockshutt, Esq.,
Lieutenant-Governor of the Province of Ontario.

May It Please Your Honour:

I herewith beg to submit for your consideration the Forty-third Annual Report of the Provincial Board of Health for the year 1924.

Respectfully yours,

Forbes Godfrey,
Minister of Health and Labour.

Toronto, February 1st, 1925.

To The Honourable Forbes Godfrey, M.D.,
Minister of Health and Labour.

Sir,—I have the honour to submit for your approval the Forty-third Annual Report of the Provincial Board of Health, made in conformity with and under the provisions of the Public Health Act, for the year 1924.

I have the honour to be, Sir,

Your obedient servant,

John W. S. McCullough,
Chief Officer of Health.

Toronto, February 1st, 1925.

Dr. R. W. Bell, late Provincial Inspector of Health, died 8th June, 1923.

ANNUAL REPORT

OF THE

Provincial Board of Health

First Annual Report of the Department of Health For the Province of Ontario

For the Year Ending December 31st, 1924

RESUMÉ OF THE TRANSACTIONS OF THE PROVINCIAL BOARD OF HEALTH BY JOHN W. S. McCULLOUGH, CHIEF OFFICER OF HEALTH.

This is the Forty-third Annual Report of the Provincial Board of Health for the year ending December 31st, 1924.

The Board held four regular sessions at which all the members were present.

Legislation:

The following legislation in respect to public health was enacted by the Legislature during the session of 1924, viz.:—

I.

An Act for the Establishment of the Department of Health.

HIS MAJESTY, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:—

1. This Act may be cited as *The Public Health Act, 1924.* Short title.

2. There shall be a Department of Health over which the Minister of Health shall preside. Department of Health.

3.—(1) There shall be a Deputy Minister of Health who shall be appointed from time to time as a vacancy occurs, by the Lieutenant-Governor in Council and shall perform such duties in the Department as may be assigned to him by the Lieutenant-Governor in Council and by the Minister, and in the absence of the Minister the Deputy Minister shall preside over the department. Deputy Minister, appointment of.

(2) The Deputy Minister shall be the Chief Officer of Health for Ontario under the provisions of *The Public Health Act.* Chief Officer of Health to be Deputy Minister.

(3) The Deputy Minister shall have, exercise and perform all the rights, powers and duties of a deputy head of a department as provided in *The Ontario Public Service Act* and amendments thereto. Powers and duties. Rev. Stat c. 14.

Appointment of officers, clerks, etc.

4. The Lieutenant-Governor in Council may appoint such officers, clerks and servants of the Department as may be deemed necessary and may prescribe their duties and fix their salaries or other remuneration.

Salaries.

5. The salary or other remuneration of the Deputy Minister and of the officers, clerks and servants of the Departments shall be fixed by the Lieutenant-Governor in Council and shall be payable out of such moneys as may be appropriated by the Legislature for that purpose.

Powers of Department.

6. The Department shall be charged with the administration and enforcement of *The Public Health Act* and generally all the statutes relating to the protection of the health of the people of Ontario, and of any regulations made under any such statutes.

Rev. Stat., c. 13, s. 3, amended.

7.—(1) Section 3 of *The Executive Council Act* is amended by adding after the words "Minister of Labour" added thereto by subsection 1 of section 3 of *The Department of Labour Act, 1919*, the words "a Minister of Health."

Rev. Stat. c. 13, s. 4, subs. 1, amended.

(2) Subsection 1 of section 4 of *The Executive Council Act* is amended by adding after the words and figures, "The Minister of Mines—$6,000" added thereto by subsection 2 of section 3 of *The Department of Mines Act, 1920*, the words and figures "The Minister of Health—$6,000."

Rev. Stat., c. 218, s. 2, cl *h*, repealed. "Minister."

8. The clause lettered *h* in section 2 of *The Public Health Act* is repealed and the following substituted therefor:

(*h*) "Minister" shall mean Minister of Health.

Commencement of Act.

9. This Act shall come into force on the day upon which it receives the Royal Assent.

II.

An Act to Amend The Public Health Act.

HIS MAJESTY, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:—

Short title.

1. This Act may be cited as *The Public Health Act, 1924.*

Rev. Stat., c. 218, s. 25, subs. 2, amended.

2. Subsection 2 of section 25 of *The Public Health Act* as amended by section 3 of *The Public Health Amendment Act, 1918*, and section 4 of *The Public Health Amendment Act, 1920*, is further amended by adding after the words, "sanitary conveniences," in the fifth line, the words: "and construct private drain connections required to connect such sanitary conveniences with the common sewers of the municipality," so that the subsection will now read as follows:—

When local board may instal sanitary conveniences.

(2) Where a local board in a city or in any town, village or police village in which a sewerage system has been established recommends that sanitary conveniences should be installed in any building, and is of the opinion that the owner of the premises is unable to pay the expense of the same at once,

the municipality may install suitable sanitary conveniences and construct private drain connections required to connect such sanitary conveniences with the common sewers of the municipality at the expense of the owner, and the board may direct that the cost, including interest at a rate not exceeding six per centum on the deferred payments, be paid by the owner in equal successive annual payments extending over a period not exceeding five years, and that such annual payments be added by the clerk of the municipality to the collector's roll and collected in like manner as municipal taxes.

Payment by owner in equal annual instalments.

III.

An Act Respecting Medical and Dental Inspection of Pupils in Public and Separate Schools.

HIS MAJESTY, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:—

1. This Act may be cited as *The School Medical and Dental Inspection Act, 1924.* Short title.

2. Section 5 of *The Department of Education Act is* amended by adding thereto the following clause:— Rev. Stat. c. 265, s. 5, amended.

(*ee*) For the medical and dental inspection of pupils in public and separate schools under agreement between the local boards of health and school boards approved of by the Minister and by the Minister of Health. Medical and dental inspection

3. Section 76 of *The Public Schools Act, 1920,* is amended by adding thereto the following clause:— 1920, c. 100, s. 76, amended.

(*jj*) Subject to the regulations to provide and pay for such medical and dental inspection of the pupils by officers of the local boards of health. Medical and dental inspection.

4. *The Public Health Act* is amended by adding thereto the following section: Rev. Stat., c 218, amended.

MEDICAL AND DENTAL INSPECTION IN SCHOOLS.

85*a*. Subject to any regulations made under *The Department of Education Act* the local board, upon such terms and conditions as may be agreed upon with any public or separate school board, shall provide medical and dental inspection for the pupils in the schools of the board and render such other services relating to the health and well-being of the pupils as any such regulation may require and as may be directed by the Minister of Health. Boards to provide for medical and dental inspection.

5. This Act shall come into force on the day upon which it receives the Royal Assent. Commencement of Act.

REGULATIONS

The following Regulations were enacted:—

(1)—Regulations Respecting the Manufacture of Non-Intoxicating Beverages, Distilled and Mineral Water, and the Manufacture of Syrup, Wines and Brewed Beer.

(*The Ontario Gazette*, October 25th, 1924.)

Copy of an Order-in-Council, Approved by His Honour the Lieutenant-Governor, dated the 15th day of October, A.D. 1924.

Upon the recommendation of the Honourable the Minister of Health, the Committee of Council advise that the attached Regulations, being Regulations respecting the manufacture of Non-intoxicating Beverages, distilled and mineral water, and the manufacture of syrup, wines and brewed beer, made under the authority of subsection (*q*) of Section 8, Chapter 218, R.S.O., amended, be approved.

Certified,

C. F. BULMER,
Clerk, Executive Council.

By virtue of Subsection (*q*), Section 8, Chapter 218, R.S.O., amended.

(1) The word "manufacture" as used in these Regulations shall mean the mixing of one or more ingredients, the manufacture of simple syrup, the mixing of acids or colours with simple syrups, and include the bottling of any beverage, or of any ingredient used in the manufacture of beverages, but shall not include the brewing, preparing, storing or bottling of malt liquors, that is to say ale, porter and lager, nor service at soda fountains, nor ice cream parlors, which takes place in full view of the customer.

(2) The word "bottling" as used in these regulations shall mean the placing of any fluid, or of any solid, or of any ingredient, which is offered for sale as a non-intoxicating beverage, or which is used in the manufacture of such beverage, in a sealed container.

(3) The word "beverage" as used in these regulations shall mean any non-intoxicating drink, distilled, mineral and spring waters, syrups, wines, brewed ginger beer, brewed infusions or other bitters, but shall not include any malt liquor, that is to say, ale, porter, or lager.

(4) *Permits.*—The application for permit shall be made in writing to the local board of health of the municipality in which the premises and manufacturing operations are situated. The application shall recite the location of the plant and the offices together with the legend name under which the business is proposed to be conducted, the names and residences of each and every member of the firm carrying on such business, and in the case of an incorporated company the names of the President and Secretary.

(*a*) Where an assignee takes over an establishment already registered and operating under permit, he shall forthwith notify the local board of health of the change of management, and as to whether the legend of the said manufacturers is to be continued, and the extent to which the property of the said manufacturers that is to say, crowns and containers are to be used in manufacture of beverages.

(*b*) Any person or persons acquiring job lots, or assets of other manufacturers shall notify the local board of health of the acquisition or use of the containers or crowns.

(*c*) Where the operation of the applicant includes the bottling, or distribution of mineral, or other waters, the applicant shall furnish in addition a description of the locality of the spring and chemical analysis of the water, together with a statement of the methods of cleansing, sterilizing and filling bottles, or other containers, at the said plant.

(5) All water used in the manufacture of beverages shall be free from foreign matter in suspension, and at no time shall show a higher B. Coli content than 2 per 100 cubic centimetres when analyzed according to the prescribed methods of the American Public Health Association, and calculated according to the method of Earl B. Phelps; and the medical officer of health, or any one appointed by him may take samples of beverages, or ingredients used in their manufacture, for analysis.

Samples may be referred to the laboratories of the Provincial Board for report. Any analysis made by and subsequently confirmed by the Provincial Board shall be conclusive evidence of the matter cited.

(6) The medical officer of health may direct the detention of any beverage, water or article found in any bottling plant, or elsewhere in respect to which the requirements of these regulations have not been complied with, or which have been released from premises in which the regulations have not been complied with, and may cause the same to be destroyed or pasteurized as he may deem necessary, and any such detained article should not be removed, except by the written authority of the medical officer of health.

(7) The manufacture of beverages and the ingredients used in such manufacture shall be conducted only in sanitary premises, and every such premises shall have proper light, both natural and artificial, proper ventilation, and the air must be free from offensive odours, chemical fumes, dust and dense smoke.

(*a*) Where stables are situated, adjacent to the bottling works, the regulations of the Provincial Board of Health in respect to the storage of manure shall be enforced, and the grounds about the premises shall be kept in sanitary condition to the satisfaction of the medical officer of health.

(*b*) Proper precaution shall be taken to exclude flies and vermin from those portions of the premises where ingredients or syrups are exposed.

(*c*) The manufacture of syrups, or of simple syrup, colours and extracts, and the preparation of syrup for use in the bottle-filling machinery shall be carried on in a room properly partitioned off from the rest of the premises, and the walls and ceiling of the syrup-room shall be smooth, free of crevices, and painted white and varnished, or enamelled or tiled. The floor must be of impervious material, kept clean and

free from dust. The containers shall be fitted with good fitting lids. Felt filters, or filter mass, or other satisfactory filtering systems for syrups must be used and be maintained in a thoroughly satisfactory condition. Proper dippers, measures, ladles, etc., shall be available for the handling of syrup, colours and extracts, and be of a type permitting satisfactory handling. No hollow handled implement is permitted. Syrups, essences, etc., shall be kept in containers, and proper shelving must be provided for the bottles containing colours, extracts, etc., and a suitable platform provided for syrup crocks, barrels and similar containers. The room shall contain a boiler, or cauldron and heating apparatus for the sterilization of syrups and containers, together with the necessary sink supplied with hot and cold water, and drained through a proper waste trap and vent.

(*d*) *Bottling-room.*—The bottling-room shall be equipped with proper facilities for the washing and sterilization of bottles and other containers. Suitable provision must be made for the soaking and rinsing of containers. A sterilizing equipment must be provided, and shall be supplied with steam or boiling water. Where wash tubs are used they must be supplied with proper waste pipes and connected to a drain, and provided with running hot and cold water. The equipment shall include proper machinery for syruping, carbonating, filling and crowning of bottles.

(*e*) Wash basins and lavatory accommodation shall be provided and readily accessible to the manufacturing room. In municipalities having a sewerage system proper lavatory and w.c. must be provided and must be supplied with running water, and equipped with soap and clean-individual towels.

Wash-room, closet and other conveniences shall be separate from the bottling room, and shall be kept clean, and in a sanitary condition. It may when large enough serve the purpose of a dressing-room, where a separate dressing-room is not provided, and shall be provided with proper light and ventilation. The Ontario Factory Act shall govern the number of conveniences, and provisions for male and female labour, as provided in that Act.

Notices shall be posted in every such lavatory, instructing the employees to wash their hands properly before starting work, and as may be required. All equipment and apparatus shall be to the satisfaction of the medical officer of health.

(*f*) *Stock-room.*—A stock-room shall be provided for the storage of sugar, syrups, crowns, etc., and all bag sugar, ginger, or extracts, whether in sealed containers or otherwise, shall be stored in a clean place free from moisture and dust.

(8) Syrups, essences, colours, fruit extracts, and fruit juices shall be prepared from articles that shall be sound, clean, wholesome and fit for food, and any such article, or the products thereof found at any premises coming under the operation of these regulations in an unsound or unwholesome condition shall be confiscated and destroyed, subject to these regulations, and no article subject to inspection under these regulations shall be offered or sold under any name intended or calculated to deceive as to its true nature. The medical officer

of health may require to be produced for inspection or for the purpose of obtaining copies thereof, or extracts therefrom any book, shipping bills, bills of lading, or other papers for the purpose of identifying the origin of any article condemned on inspection, and for the purpose of determining the destination of the manufactured product, which has been shipped, and containing the alleged deleterious matter.

(*a*) Colour, essences and extracts and fruit juices used in the manufacture of beverages within the meaning of these regulations shall conform with the requirements of the Food and Drug Act, and the Adulteration Act of the Dominion of Canada. Colours may be sterilized by heating to a temperature of 150°F. for thirty minutes, and then cooled before mixing with syrups or extracts. All colours in solution shall be kept in clean, sterile containers.

(*b*) All component ingredients shall be properly filtered before use.

(*c*) *Simple Syrup.*—It is recommended that simple syrup be made by mixing the desired amount of sugar and water, and that this solution be not super-saturated when cold. To sterilize, the syrup may be heated to a temperature of 150°F. and maintained at that temperature for thirty minutes. It should be allowed to cool before adding the extract and colour. Syrups must be kept in clean, sterile containers and if a scum appears on the surface of the syrup during the process of heating it shall be removed only with a sterile skimmer. Syrup shall be passed through proper filters. Filters shall be thoroughly cleaned and sterilized by boiling before use.

(9) *Bottling and Washing Machinery.*—Every machine used in the filling or washing of containers, together with the pipes, spouts and storage vats shall be kept in a thoroughly sanitary manner, and shall be sterilized by steam as required.

(*a*) Syruping or filling by any arrangement of apparatus in which the operator's hand is directly above the open container or containers is not permissible, and the feeding of crowns by hand into crowning machines is objectionable.

(10) *Cleansing of Containers.*—All bottles and other containers used for the storage of beverages and ingredients used in the manufacture of beverages shall be thoroughly cleansed immediately before use, and sterilized by scalding water or steam, except in the case of automatic soakers, using 3 per cent. caustic soda solution, and where the contact period in the soaker is not less than ten minutes, five minutes of which shall be in the caustic solution. All bottles shall be examined immediately before washing. Those which have contained oil, or other substances difficult of removal, and objectionable from the standpoint of the bottle cleaner, together with those containing any foreign objects shall be discarded and no bottle, other than the property of, or under lease to, the bottler shall be used.

(*a*) *Hand Washing.*—Bottles must be soaked in a tub, in which the water shall be raised to a temperature of, at least, 120°F. The soak water shall contain an approximate 3 per cent. of caustic soda, soda ash, or other approved washing compound, that is to say, one pound of the compound to every three gallons of water in the soak tub. The bottles must be entirely immersed in the soak at the correct temperature for, at least, thirty minutes. They shall then be emptied of all solution, hand-rubbed, and brushed by a rotary brush.

The rotary brush machine shall be fitted with a brush of such size as to do the work efficiently, and all such brushes shall be kept clean and in good repair. All visible foreign matter must be removed before proceeding to a further soak in clean, clear water, in which they shall be washed free of all traces of the soaking solution. The temperature of the second bath or rinse shall be not less than 120°F. The bottles then may be removed and sterilized on a rinser by water at a temperature of 180°F., or steam for a period of three minutes. They then may be inserted in an upright position in cases, following which they shall be laid on their sides and kept in that position until cool and ready for filling. Bottles which are not immediately filled and sealed shall be returned to the sterilizer and resterilized before use.

(*b*) *Automatic Soaker and Bottle-Washing Machinery.*—All automatic soakers and bottle-washing machinery must be provided with steam, or other facilities in order to maintain the proper temperature, and in all such machines bottles shall be held at least five minutes in a 3 per cent. caustic soak solution, the temperature of which shall be raised to at least 120°F. The bottles shall be held in the soakers not less than ten minutes. One compartment soakers must be provided with tray, rotary brush machine and rinser, or other means by which efficient washing may be done. The density of the caustic solution in automatic soakers must be frequently tested by the use of a hydrometer, the reading upon which shall be 1.025. The soaker shall be charged as required with caustic soda that has first been dissolved. Automatic bottle washers shall at no time be operated so as to permit bottles passing through, showing traces of suspended matter and improper sterilization.

(11) *Siphons.*—The filler's name or legend shall appear, blown or etched, on the glass of every siphon.

(12) (*a*) *Containers.*—In order to facilitate inspection, it is recommended that manufacturers standardize containers containing a clear glass, which through the use of reflected light will indicate the presence of foreign matter or films on their surfaces. *The use of small mouth stoneware, crock and other opaque containers for beverages is extremely unsatisfactory on sanitary grounds and their use is hereby prohibited on and after June 1st, 1927.* Kegs and barrel containers should be so supplied with bungs that the interiors can be readily sighted and steam readily applied for sterilization.

(*b*) Kegs and barrels shall be effectively sterilized by steam or otherwise, immediately before re-filling.

(*c*) The packaging of dry products used in the industry should be in containers, which may be hermetically sealed, and not readily subject to damage in transit.

(*d*) New bottles and other containers shall be free of fine particles of glass, dust or other harmful substances introduced in the manufacture, and shall be sterilized before use.

(13) No person shall be employed about any premises used for the manufacture and handling of beverages, or ingredients used in the manufacture of beverages, who does not observe cleanliness in his or her habits, and who is not free from communicable disease. All persons engaged in bottling, or handling of beverages directly shall wear when at this occupation suitable clothing.

(14) Penalties shall be those set out in Subsection 2 of Section 100 of the Public Health Act.

(2)—Regulations for Medical and Dental Inspection of Public and Separate Schools

1. Local Organization

(1) On and after July 31st, 1924, every arrangement for Medical and Dental Inspection made by a School Board, or a number of School Boards acting together, shall be in charge of the local Health authorities as provided for in section 76 (*jj*) of the Public Schools Act as amended in 1924.

(2) Any School Board may, with the approval of the Minister, enter into an agreement with the local Board of Health whereby the latter shall provide Medical and Dental Inspection for the pupils in the schools under the Board, and render such other services relating to the health and well-being of the pupils as the Regulations may require.

(3) Where a School Board or number of School Boards acting either alone or in conjunction with other local organizations, approved for this purpose by the Minister, have already adopted a system of Medical and Dental Inspection, it shall be conducted as heretofore, but the Board or Boards concerned may at any time, by resolution, decide to carry on the service as provided for in sections (1) and (2) above.

2. Central Office Administration

(1) The Department of Health shall appoint officers for the purpose of Medical and Dental Inspection in the Public and Separate Schools of Ontario, and shall fix and pay the salaries and travelling expenses of such officers, and the expenses incidental to such inspection; but every such appointment shall be first approved by the Minister of Education.

(2) The Department of Health shall make recommendations to the Minister of Education that such grants as are provided by the Department of Education be paid to School Boards or Medical Inspection Committees, when the work done meets the standard set by the Department, and shall make recommendations to the Minister of Health respecting grants to be paid by the Department of Health under similar circumstances.

(3) It shall be the duty of such officers—

(*a*) To inspect the work of School Medical Officers, Dental Officers and Nurses appointed by Boards of Education, School Boards or local Boards of Health.

(*b*) To furnish reports in duplicate, one to be sent to the Minister of Education and the other to the Minister of Health. In this report shall be included such information as the type of work done, the number of persons employed, the number of children in the district served, and the amount of time given by the staff employed for this service.

(*c*) To supply such instructions and help in the installation of Medical and Dental Inspection and School Nursing in all centres where such service is adopted.

(*d*) To encourage the adoption of the standard Physical Record Form now in use throughout the Province, and known as the A.D.P. Card, and such other forms as may make satisfactory record-keeping possible.

(*e*) To perform such other duties as may be jointly agreed upon by the Minister of Education and the Minister of Health.

3. Qualification of Staffs

(A) Medical and nursing

(1) Where an agreement has been entered into between the School Board and the local Board of Health to carry on a system of School Medical Inspection, the Medical Officer of Health for the Municipality shall, subject to the approval of the Minister of Health, act as School Medical Officer, or Chief School Medical Officer, as the case may be.

(2) Under the system of Medical and Dental Inspection in operation previous to July 31st, 1924, the School Board or the Committee shall appoint for the purpose of Medical Inspection one or more legally qualified medical practitioners of not less than two years' experience in the practice of their profession; or, with the approval of the Minister, they may appoint the local Medical Officer of Health who, subject to the Regulations, shall perform the duties of School Medical Officer in addition to those of Medical Officer of Health.

(3) When the School Board or the Committee is unable to secure the School Medical Officer provided for in section 1, subsection 3, it may substitute therefor one or more nurses who shall be graduates of a reputable training school for nurses with not less than two years' experience in nursing, and who shall have satisfactorily completed the Course for School Nursing given annually by the Department of Education, or shall have obtained the Diploma of Public Health Nursing from a recognized University, and this Regulation shall not apply to any Municipality where Medical Inspection is established under the local Board of Health.

(4) Where duly qualified nurses are not available, the Department of Education shall have power to grant temporary certificates to nurses on the application of the appointing body.

(5) The Officer appointed under (1) and (2) above shall be known as the School Medical Officer.

(6) Where Medical Inspection is established by the local Board of Health, the Nurse or Nurses employed for Public Health and School work shall be qualified as in subsections (3) and (4) above, and shall be subject to the approval of the Department of Health.

(B) Dental

(1) The Dental Inspection shall be carried on by the Board or the Committee or the local Board of Health under the Regulations herein prescribed, by one or more officers appointed by such Board or Committee or by the local Board of Health, who shall be known as School Dental Officers and who shall be duly qualified Dental Surgeons of not less than two years' experience in the practice of their profession.

(2) When more School Dental Officers than one are appointed, one may be designated, by the Board or the Committee or the local Board of Health, Chief School Dental Officer, and, subject to the Regulations, he may be given such oversight of the duties of the others as the local authority may determine.

(3) The School Board or the Committee or the local Board of Health provided for in Regulation (1), may also appoint a School Dental Officer, or Officers, who shall be subject to the general oversight of the School Medical Officer as defined by the Regulations.

4. Additional Appointments

(1) When the School Board or the Committee appoints more than one School Medical Officer, or more than one School Nurse, one of the former may be designated by it as Chief Medical Officer and one of the latter as School Nurse Supervisor, and subject to the Regulations may be given such oversight of the duties of the others as the School Board or the Board of Health or the Committee may determine.

(2) In addition to the School Medical Officer or Officers, the School Board or the Committee may appoint one or more nurses who shall be qualified in accordance with the Regulations, and shall be known as School Nurses. Subject to the Regulations these nurses shall be under the direction of the School Medical Officer, or Chief School Medical Officer, as the case may be.

5. Expenses

(1) Where Medical and Dental Inspection is provided by a School Board, the cost thereof shall be included in that of the maintenance of the school, and shall be provided for in the same manner.

(2) Where Medical and Dental Inspection is provided for by a Committee, the cost of maintenance to be borne by each of the Boards and other local organizations represented thereon shall be settled by mutual agreement between the said Boards and organizations, and in the case of the School Boards it shall be included in the cost of the maintenance of the School and be provided for in the same manner.

(3) Where Medical and Dental Inspection is provided by the local Board of Health, the appointment of physicians, nurses and other services shall, subject to the Regulations, be made by the local Board of Health who shall bear the expenses of such services.

6. Inspection

(1) The School Board or the Committee or the local Board of Health shall determine how often the members of the staffs appointed under the Regulations shall visit the schools; but without the sanction of the Minister, the number of such visits shall not be less than one a month.

(2) The hours of work of the members of the said staffs shall be determined by the Board or the Committee or the local Board of Health, as the case may be, but shall be during the regular school hours, except, in the case of the nurses, when home visiting may make regular hours impossible; but the School Board, Committee or the local Board of Health may arrange for additional home visiting on Saturdays.

(3) Subject to the approval of the Principal, the inspection may be made in the classroom; all examinations, however, shall be made in a suitable room or other part of the building where no other pupils are present.

(4) The Board or the Committee or the local Board of Health may install in a room suitable for the purpose, in one or more of the school buildings, one or more dental chairs for the examination of the pupils' teeth.

(5) Subject to the approval of the parents or guardians, the Board or the Committee or the local Board of Health may make the necessary arrangements for the free treatment of defects found in pupils whose parents or guardians are unable to pay therefor.

7. Duties of School Medical Officer Staffs

(1) In such of his duties as affect the general organization and management of the schools, the School Medical Officer or the Chief School Medical Officer, as the case may be, shall be subject to the authority of the School Inspector or the local Chief or Senior School Inspector or the Principal of the School, when, owing to other duties, the School Inspector is not accessible.

(2) The School Medical Officer shall supply each Principal with a copy of the time-table mutually agreed upon for each school, and when the School Medical Officer finds it impossible to be present at the time fixed by this time-table, he shall notify the Principal of the school affected.

(3) (*a*) The School Medical Officer shall from time to time make such inspection of the pupils as he may deem advisable.

(*b*) The School Medical Officer shall make a complete physical examination of every pupil as soon as practicable after his admission to the school.

(*c*) The consent in writing of the parent or guardian for such examination and for the removal of the necessary clothing must first be obtained.

(*d*) The examination in the case of females shall be made in the presence of the School Nurse.

(4) A complete physical examination shall consist of an examination of the head, eyes, ears, nose, throat, teeth and cervical glands, of the heart, lungs, spine and joints, feet, limbs and abdomen, and of the skin. The examination of the eyes and ears shall include testing for sight and hearing. The presence or absence of vaccination scars should be recorded.

(5) (*a*) The examination provided for in subsection (4) above shall deal with any new cases which may be referred to the School Medical Officer by the School Inspector, Principal, or the School Nurse, and with any other cases which a previous examination has shown to need attention, or which otherwise may come to the notice of the School Medical Officer.

(*b*) The parents or guardian shall be notified in writing of any defects found in a child.

(*c*) A home visit by the nurse shall be made as soon as possible in all cases referred to in subsection (*b*) above.

(*d*) A record of all physical examinations of the pupils shall be made by the School Medical Officer, on the reference card approved by the Minister and known as the A.D.P. Card, and such record shall be kept in the school building and shall be available at all times for the School Health staff.

(6) Where the School Medical Officer finds that the physical condition of a teacher, janitor or other person employed in a school, is dangerous to the health of others in the school, he shall forthwith report the matter to the Medical Officer of Health, and exclude the teacher, janitor or other person from the school, and such person shall not return to school until the Medical Officer of Health certifies that he may safely do so.

(7) A School Medical Officer or a School Nurse may, in case of emergency, bandage wounds and apply antiseptic dressings to cuts, wounds and bruises, as first aid only.

(8) The School Medical Officer shall give the School Inspector such assistance as he may require in organizing the special classes, and preparing the syllabuses authorized for subnormal pupils under the Public and Separate School Regulations.

(9) The School Medical Officer or the Chief School Medical Officer, as the case may be, shall make a written report to the Board or the Committee or the local Board of Health, at least once a month.

(10) At the close of each school year or at such other times as he may be called upon, the School Medical Officer shall make a report to the School Board or the Committee or the local Board of Health on the general health of the school children, and any conditions of home environment that come under his notice, that injuriously affect the health of the pupils. In such report he shall make recommendations when in his judgment action should be taken by the Board or the Committee or the local Board of Health.

(11) It shall be the duty of the School Medical Officer or the Chief School Medical Officer, as the case may be, at the close of each school year, to forward in writing to the Department of Health a report in duplicate, which shall include the local plan of organization, the amount and type of work done, the number of children in the area, and the personnel employed, with a statement of the results obtained.

8. Duties of School Nurse Staffs

(1) Where it is impossible to secure a School Medical Officer or Medical Officer of Health in charge of Medical Inspection, the School Nurse shall supply to each Principal a copy of the time-table mutually agreed upon for each school, and when the School Nurse finds it impossible to be present at the time fixed by this time-table, she shall notify the Principal of the school affected.

(2) (*a*) The School Nurse or Nurses shall make an inspection of each child as soon as practicable after admission to the school, and as often as is prescribed above, and shall report in writing to the Board or Committee, and she shall keep the records.

(*b*) The inspection shall consist of an inspection of the scalp; skin of the face, neck and hands; the mouth, throat and teeth; the joints and spine; and shall include simple tests for sight and hearing. Pulse and temperature shall be observed if necessary, and the presence or absence of vaccination scars recorded.

(3) The inspection provided for above shall deal with any new cases which may be referred to the School Nurse by the Inspector or the Principal, and any other cases which previous inspection has shown to need attention, or which may otherwise come to her notice.

(4) On completing the inspection provided for in (2) (*a*) and (*b*) above, the School Nurse shall notify the parent or guardian of the physical condition of the child.

(5) A record of all inspections of the pupils shall be made by the School Nurse on the reference card approved for this purpose by the Minister, and known as the A.D.P. Card, and such records shall be kept by the Nurse.

(6) (*a*) The School Nurse shall visit the pupils' homes as prescribed above.

(*b*) The School Nurse shall keep a written record of such visits and conferences.

(7) The School Nurse shall give the School Inspector such assistance as he may require in organizing the special classes and preparing the syllabuses authorized for subnormal pupils in the Public and Separate School Regulations.

(8) The School Nurse shall assist the School Inspector in preparing the reports required from him under 5 (1) (*c*) above, as to the results of the work.

(9) The School Nurse shall, in the absence of a School Medical Officer, forward to the Department of Health at the close of each school year, a report in duplicate which shall include the local plan of organization, the amount and type of work done, and the results of the same.

9. Duties of Dental Officer Staffs

(1) In such of his duties as affect the general organization and management of the schools, the School Dental Officer shall be subject to the authority of the School Inspector or the local Chief or Senior School Inspector, as the case may be, or of the principal of the School, when, owing to other inspectional duties, the School Inspector is not accessible.

(2) The School Dental Officer shall supply each Principal with a copy of the time-table mutually agreed upon for each school, and when the School Dental Officer finds it impossible to be present at the time fixed by this time-table, he shall notify the Principal of the School affected.

(3) Subject to the approval of the Principal, the inspection shall be made in the classroom, if no other room is available, otherwise in a suitable room or other part of the building where no other pupils are present.

(4) (*a*) Once every year and at such other times as the School Board or the Committee or the local Board of Health may direct, the School Dental Officer shall make an examination of the teeth of all the pupils attending the school or schools.

(*b*) The examination shall be made at as early a date as is practicable after the opening of school.

(5) When a member of the School Dental Officer staff reports that the teeth of a pupil require dental attention, notice of the facts shall be sent to the parent or guardian.

(6) At the close of the school year the School Dental Officer shall make a written report on the general condition of the teeth of the pupils to the School Board or the Committee or the local Board of Health. In such report he shall make recommendations when in his judgment action should be taken by the Board or the Committee or the local Board of Health.

(7) It shall be the duty of the School Dental Officer at the close of each school year to forward in writing to the Department of Health, a report in duplicate which shall include the local plan of organization, the amount and type of work done, and the result of the same.

10. Duties of Principal

(1) It shall be the duty of the Principal of the School visited by a School Medical Officer or a School Nurse or a School Dental Officer, to afford every facility for the work of Medical and Dental Inspection, and to require every pupil to submit to such inspection or examination as the Regulations prescribe.

(2) (*a*) (i) The Principal shall exclude from school any pupil who has been reported to him by the school Medical Officer or School Nurse as having symptoms of any communicable disease, and shall forthwith report the case to the Medical Officer of Health.

(ii) In other cases the Principal shall act on his own judgment, and shall immediately notify of such action the Medical Officer of Health and the School Medical Officer or School Nurse when there is one in charge.

(iii) The pupil so excluded shall not return to school until he presents to the Principal a certificate in writing signed by the Medical Officer of Health, that such attendance may safely be allowed.

(*b*) (i) When a pupil is discovered with pediculosis or with such skin diseases as itch, ringworm or impetigo, the Principal on the report of the School Medical Officer or the School Nurse that the child cannot attend school without danger to other pupils, shall immediately send the pupil home and notify the Medical Officer of Health.

(ii) A pupil so excluded shall be required to report to the School Nurse or School Medical Officer, or in the absence of these, the local Medical Officer of Health, within a period of one week for re-examination; and he shall not be readmitted until he presents to the Principal a certificate in writing signed by the Medical Officer of Health that such attendance may safely be allowed.

(3) The Principal shall confer with the School Medical Officer or family physician in regard to the physical exercises that are to be taken by the pupils whose condition demands such conference, and physical exercises for such pupils shall be outlined in writing by the School Medical Officer, if there be one, otherwise by the family physician.

(4) Subject to instructions from the School Board, or the Committee or the local Board of Health, as the case may be, the Principal shall arrange for conferences between the teachers and members of the inspectional staff to discuss school hygiene, and other matters relating to the health and well-being of the pupils.

11. Grants

(1) All grants to School Boards, provided under the Regulations of the Department for services herein mentioned, shall be apportioned and allotted by the Department of Education, upon the recommendation of the Department of Health for the Province.

These grants as at present awarded are as follows:—

An annual grant of $10.00 per classroom to every rural School Board, where the trustees have undertaken the engagement of a School Nurse who devotes her whole time to this work, either acting in conjunction with a number of other rural Boards or with the Boards of the town or village adjoining.

(2) An annual grant of $10.00 per classroom in a town or village, when the School Board of such town or village has entered into an agreement with

a number of rural School Boards for the purpose of employing a School Nurse, who shall devote her whole time to the work.

(3) An annual grant of $5.00 per classroom in a town or village where the School Nurse who devotes her whole time to the work has been appointed under the Regulations of this Department.

(4) An annual grant of $3.00 per classroom in a city of less than 200,000 population where a system of School Medical Inspection, approved by the Minister, is carried on.

(5) Every local Board of Health which inaugurates and carries on Medical and Dental Inspection of Schools, and employs at least one Public Health Nurse in such work, shall be entitled to receive an annual grant from the Department of Health of $500.00 towards the salary of such Nurse.

(6) In every municipality with a population of less than 200,000, an additional annual grant of $100.00 shall be paid towards the salary of each additional Public Health Nurse so employed.

(7) In every municipality with a population of 200,000 and upwards, an additional grant of $25.00 shall be paid towards the salary of each additional Public Health Nurse so employed.

(3)—Regulations Governing the Instruction and Management of Swimming-pools.

COPY OF AN ORDER-IN-COUNCIL APPROVED BY HIS HONOUR THE LIEUTENANT-GOVERNOR, DATED THE 9TH DAY OF JULY, A.D. 1924

(*The Ontario Gazette*, July 26th, 1924)

Upon the recommendation of the Honourable the Minister of Health, the Committee of Council advise that the Regulations governing the construction and management of swimming pools be approved; the same to come into effect on the 1st day of June, 1924.

Certified,

C. F. BULMER,
Clerk, Executive Council.

Regulations Governing the Construction and Management of Swimming Pools

Section 1.—These regulations shall apply to swimming pools operated in connection with any school, hospital, or educational institution, or any Y.M.C.A. or Y.W.C.A., or any athletic association, or to pools inviting public patronage, but shall not apply to baths or pools where use is restricted to therapeutic purposes.

Section 2.—The water in every swimming pool must not be artificially heated to a temperature above 72° F. The room containing the pool shall be properly ventilated, and the temperature of the air at artificially heated pools must not be permitted to become more than 8° F. warmer nor more than 2° F. colder than the water in the pool at any time, when the pool is in use except in the case of pools operated in the summer as open air pools. It is recommended that the air temperature should be 5° F. warmer than the pool temperature.

Section 3.—Provision shall be made at every such pool for the effective cleansing of the person of all bathers before entering the pool, and the use of such provision shall be compulsory. All apparatus for this purpose shall be subject to inspection, and approval of the local board of health, and no pool shall be continued in use for which the approval of the local board of health has not been obtained in writing under the signature of the Medical Officer of Health and the Inspector of such premises.

Section 4.—The number of bathers using a swimming pool during any 24-hour interval shall not exceed twenty (20) persons for each thousand gallons of clean water added to the pool during that period, and at no time shall the number of bathers exceed three (3) persons per 1,000 gallons total capacity. The term clean water as used shall be interpreted to mean new, clean water used to refill the pool; new, clean water used to replace loss by splashing or during cleaning, water taken from the pool and returned after effective filtration, or any combination of such waters.

Section 5.—At all times when the pool is in use the water shall be reasonably free from algae growths and sufficiently clear to permit a black disk six inches in diameter, on a white field, when placed at the bottom of the pool at the deepest point to be clearly visible from the sidewalks of the pool at all distances, up to ten (10) yards, measured from a line across the pool through said disk.

Section 6.—There shall be maintained in the water of all swimming pools during the bathing period, an amount of available excess chlorine not less than 0.2 parts per million, nor shall the excess be more than 0.5 parts per million, as determined colorometrically with recognized standard ortho-tolidin solution.

Section 7.—Whenever alum or sulphate of alumina are used in connection with the purification or re-purification of swimming pool waters, the water at all times, when the pool is in use, shall show an alkaline reaction to methyl red.

Section 8.—There shall be maintained in connection with every swimming pool, sanitary conveniences, located adjacent and opening into the dressing, or shower bathrooms.

Section 9.—The connection for the re-circulation of water in swimming pools shall be made at a point which will permit of effective drainage of the floor of the pool, and every pool shall be provided with a scum gutter at, or near water level, of sufficient depth to preclude re-entry of drainage, and all such gutters shall be connected through a handhole trap to a sewer.

Section 10.—The floors of all areas, adjacent to the swimming pool, shower and dressing rooms shall be effectively drained and every such floor shall be constructed of impervious material.

Section 11.—Bathing suits and towels must be washed and handled in a manner satisfactory to the local medical officer of health.

Section 12.—Each swimming pool shall be under the supervision of a responsible, and trained operator, and no bathing shall be permitted in the absence of such supervision.

Department of Health.—As will be seen by the initial item of legislation passed in 1924, a Department of Health has been established for Ontario. This marks a new era in the history of public health affairs, forty-two years having elapsed since the Provincial Board of Health was established, and the first Public Health Act passed. As the history of public health in Ontario was reviewed by the writer in the report for the year 1920, it will be unnecessary

to repeat the information contained therein. Suffice it to say that there has been steady progress made in administration since the date of the review referred to.

Medical Inspection of Schools.—Perhaps the most important step achieved in recent years is the transfer (1924) of the work of medical and dental inspection of schools from the Education Department, which initiated this work in 1919, to the Department of Health. This transfer is in accordance with the desire of the Government, that health work of all kinds shall be consolidated with a view to efficiency and economy. The legislation and the regulations concerning the school work may be found under the heading of "legislation." The plan whereby this service is proposed to be carried on in future is briefly as follows:

In places where medical and dental inspection has been established under the control of a school board, or of a school board and other local organization combined such arrangement may be continued, but where any new work of the kind is inaugurated such work will, in the future, be under the control of the local board of health, the medical officer of health will automatically become medical officer of the schools, of the municipality, and with the nurse or nurses and dental officer, will carry on the work. Under the latter plan the regulations provide for a grant of $500 towards the pay of the first nurse appointed and in case of municipalities of less than 200,000 population, $100 for each additional nurse. If the population is 200,000 or over, the grant for each additional nurse will be $25.

Biological Products and Insulin Distribution.—Herewith follows a detailed statement relative to the purchase and distribution of biological products and Insulin for the fiscal year, ending October 31st, 1924:

Factors in the Public Health Advancement.—In State Public Health Work, there are three governmental factors. These are, the governments of the Dominion, of the Province, and of the municipality. All three have important duties to perform in the prevention of disease and the promotion of public health. The Dominion Government has for years maintained a quarantine service against foreign countries; the Immigration Department exercises supervision over the physical condition of intending immigrants; the Indian Department looks after the health of the aborigines of Canada. Five years ago a Department of Health with a Minister in charge was set up, and a Dominion Council of Health comprising the executive health officer of the provinces and five others representing educational, women's, labour and agricultural interests established in an advisory capacity. Further than this, the Department issues literature on various public health subjects, and for the last five years has afforded a grant of $200,000 to the provinces for the control of venereal diseases.

In Ontario, the Department's organization for the supervision of the public health work is satisfactory, and may truthfully be said to be equal to that of any other state or country. It must be remembered, however, that the Government department can at best only guide and direct. The real, intensive public health work must, as has frequently been pointed out, be carried on by the local community and by the people themselves in their homes and as individuals.

The defect in our municipal system of local health administration is that the municipality, such as a small town, village or township, is financially unable to bear the burden of an efficient health organization. There are upwards of 900 municipalities in Ontario. In but eight of these is there a full-time health officer. This official in all the other municipalities is a practising physician who gives more or less of his time to the public health work of his municipality.

In the smaller towns, villages and rural areas, he is paid, and often grudgingly paid, but a trifle for his services. Many of the municipal authorities seem to have the idea that the services of the medical officer of health consist of putting up placards in cases of communicable disease, and fumigating premises after the disease has subsided. The time and expenses of the medical officer of health who does this work is, to a large extent, wasted. Placarding of premises should be done by a cheaper type of official than a physician, and the same is true of fumigation of premises, which is rarely necessary. The trained medical officer of health knows a dozen other ways in which he can be of much more value to his community, in, for example, the promotion of pre-natal clinics, the discovery of early cases of tuberculosis, in supervision of the milk supplies, of water supplies, in medical inspection of schools, etc. While many of the part-time medical officers of health do render service of a high value to their respective municipalities, such men have had some training in their duties; but invariably services of the kind are rendered to the prejudice of their own interests and the injury of their private practice. Most of the part-time medical officers of health have had no training of any consequence in sanitary work and their remuneration fails to compensate for the disabilities which the assumption of the duties of such an office entails. Practice of medicine is their vocation, their means of livelihood. The work of preventive medicine is naturally a very much secondary consideration with the average medical practitioner.

The taxpayer objects to the expenditure of public money unless he can see a reasonable prospect of return. It is difficult for him to see the value of public health measures. It is not difficult for the professional health worker to see these things. They are examples in his daily experience. Until the taxpayer learns to appreciate the financial value of public health measures, reform in our present local health administration will be slow of growth.

As already pointed out the smaller municipalities are not financially able to bear the burden of a full-time organization. Under such circumstances the obvious thing to do is to consolidate under one efficient administration, a sufficient number of municipalities, the combined funds of which would be used for health purposes. This is exactly what is going on in Great Britain and in the United States. In the former country, where the population is much denser than in Ontario, the unit for health purposes is called the "combined area," this being a county or part of a county with the contained towns and villages. The area so established receives from the Government one-half the salary paid the medical officer of health, whose qualifications must be approved by the Ministry of Health. In the United States, the plan is known as the County Health Officer system, the unit being usually the county. The plan is being rapidly developed in England, Scotland and Wales. In the United States there was but one County Health Officer in 1908. There are now (1924) 260.

In order to educate the public in the value of a full-time health service, no plan seems to be better than to set up a few "demonstration areas" as examples of how the work can be carried on. A moderate-sized county or a small city, with or without the inclusion of adjacent suburban areas, or a few townships might be utilized for this purpose. It would seem an advantage that such areas should receive government support for a reasonable period of say five years. During this time the "demonstration areas" would have afforded a working example to the rest of the Province, its success would stimulate other groups to enter the movement and the advantages shown by this plan would be likely to cause a spread of the plan all over the Province. Without the provision for demonstration of the kind as a means of education, it is improbable that the

"combined areas" plan will voluntarily be adopted with any degree of rapidity, unless the municipal authorities are educated to appreciate the economy, increased efficiency, and good results of such a plan.

ANNUAL REPORT FOR 1924, DIVISION OF PREVENTABLE DISEASES.

Dr. R. R. McClenahan, D.P.H., Director.

I have the honour to submit the following report of the work done by the Division of Preventable Diseases for the year ending December, 1924.

1. *Field of Activities.*

Before going on with the report in detail it is perhaps advisable to refer briefly and in a general way to the work carried on by the Division during the year. Reference was made in the report of last year to a broadening in the scope of work and it takes but a brief glance at the reports of former years to show how the field has enlarged and the activities of the Division expanded. Particular reference should be made I think in this connection to the travelling Diagnostic Chest Clinic which was organized by the Provincial Board last year. There is no question but that the establishment of this clinic has been a success, and physicians in many parts of the Province have been only too glad to have their cases brought up for examination and consultation.

Under the heading "Investigations" will be found epidemics of communicable diseases in the control of which, and in co-operation with the District Officers of Health and local authorities, the Division took an active part. The greatest of these epidemics was the smallpox outbreak at Windsor, as the result of which almost the entire population in that section of the country was vaccinated.

The efforts of the Provincial Board in connection with the treatment and control of the venereal diseases still constitute the major part of the work of the Division. No new Venereal Disease Clinics were formed during the year though there has been an increase in the number for treatments given in those now in operation. The educational programme carried out by the Social Service Department along the lines of social hygienics was much greater than last year and a great deal of interest was shown by the public at large in this particular line of work.

2. *Personnel.*

Changes occurred in the personnel of the Division during 1924. Towards the latter part of the year, Dr. Charles P. Fenwick, Clinician, and Miss Edna Moore, Social Service Nurse, resigned the service to take up appointments elsewhere. The Division now has a director, three clinicians, one nurse and two stenographers.

3. *Finance.*

The amount of money available for the work of the Division during the year was $186,621.83, of which $60,171.83 was advanced by the Dominion Government.

4. *Diagnosis.*

(*a*) *Reported by Physicians.*

The number of cases and deaths from communicable diseases reported by physicians during the year is shown in the following along with the totals for 1923:

CASES AND DEATHS FROM COMMUNICABLE DISEASES

Reported Weekly by Local Boards of Health for Year, 1924

(*d*) Clinical Office Work.

In addition to the treatments given in the various Government institutions and the numerous trips that are taken for the purpose of intravenous demonstration and consultation by the Venereal Disease Clinicians, a great deal of work is being done by them in connection with men and women who are continually coming to the office of the Division for advice and, if necessary, treatment as to their condition.

The following is a brief summary of the work done:—

Total number of office consultations		540
Number of Wassermans taken		90
No. positive	23	
No. negative	67	
No. of G. C. smears taken		99
No. positive	66	
No. negative	33	
Number of dark field examinations		10
No. positive	4	
No. negative	6	
Number of urine-analysis		27
Number of treatments		160
Number of advice as to treatment		154

This is a substantial increase over 1923 when the figures were:—

Total number of office consultation		339
Number of Wassermans taken		58
No. positive	18	
No. negative	40	
Number of G. C. smears taken		90
No. positive	61	
No. negative	40	
Number of treatments given		102

5. *Treatment of the Venereal Diseases.*

(*a*) Clinics.

As stated above the number of clinics for the free treatment of venereal diseases throughout the Province still stands at eighteen.

The grand total of treatments given in all clinics during the year was, 101,856 as against 84,981 in 1923. Attached will be found the treatments given in each clinic in 1924.

Concerning the work being carried on in the clinics the following figures are of interest:—

There were 2,285 new admissions to the clinics in 1924 subdivided as follows:

Syphilis		932
Males	526	
Females	406	
Gonorrhoea		1,353
Males	914	
Females	439	

Number of inpatients treated in hospitals where there are venereal disease clinics was 1,776:—

Adults				Children			
V.D.S.		V.D.G.		V.D.S.		V.D.G.	
Male	Female	Male	Female	Male	Female	Male	Female
581	406	396	291	24	30	6	42

Total outpatients under treatment:—

Grand Total..... 101,856

The Division made seventy-two inspections of the Toronto clinics and forty-five inspections of outside clinics during the year. Two hundred and ninety-eight biological tests for phenarsenamine and mercury salicylate were carried out during the year.

(*b*) Treatment in Smaller Centres.

Thirty-four trips were made by the V.D. Clinicians during the year for consultation and demonstration of anti-syphilitic treatment to physicians in smaller towns where no clinic is situated. The following are the places visited:—

Gananoque	Hawkesbury	Trenton	Tavistock
London	Montreal	Belleville	Uxbridge
Thedford	Belleville	Everett	Wellington
Belleville	Palmerston	Stouffville	Cincinnati
Gravenhurst	Blind River	Guelph	Brantford
Meaford	Niagara Falls	Niagara Falls	Elgin
Teeswater	Cripler	Brampton	Packland
Georgetown	Chatham	Orillia	
Coniston	Waubashene	Hillsburg	

(*c*) Institutions.

The Division still makes weekly trips to Guelph Reformatory and the Mercer Reformatory for the purpose of treating the infected inmates. Occasional trips are made to the Industrial Farm, Burwash and Victoria Industrial School, Mimico. Treatment is supervised and the Provincial Board of Health products used at the Men's and Women's Farm, Concord. The following figures show the amount of work done in these Institutions by the Medical Officers and Clinicians of this Division:—

Institutions	No. of Visits	V.D.S. Treatments	V.D.G. Treatments	Wassermann
Industrial Farm, Burwash	3	624	10,198	992
Ontario Reformatory, Guelph	48	550	1,450	809
Mercer Reformatory	49	905	1,711	498
Men's Farm	....	371	310	†1,374
Women's Farm	....	*385	1,023	149
Victoria Industrial School	7	28	....	78
Total	107	*2,863	*14,692	3,900

*Mercury. †Irrigations.

The extent of venereal disease among the inmates of Burwash, Guelph and the Mercer Reformatory in 1924 is shown below with figures and percentage for 1923 and 1922:—

		1924	1923	1922
Burwash—	No. of admissions	1,078	709	746
	No. of V.D.S. cases	61	34	90
	No. of V.D.G. cases	55	43	37
	Per cent. syphilis	5.6%	4.8%	12%
	Per cent. gonorrhoea	5.1%	6%	5%
Guelph—				
	No. of admissions	748	734	960
	No. of V.D.S. cases	42	63	78
	No. of V.D.G. cases	14	37	66
	Per cent. syphilis	5.61%	8.58%	8.1%
	Per cent. gonorrhoea	1.87%	5.04%	6.3%
Mercer—				
	No. of admissions	164	167	137
	No. of V.D.S. cases (Inc. D.I.)	58	62	48
	No. of V.D.G. cases (Inc. D.I.)	46	68	65
	No. of double infections	20	36	24
	Per cent. of V.D.S.	43%	37.1%	36%
	Per cent. of V.D.G.	35%	40.07%	47%

(*d*) Manufacture and Distribution of Phenarsenamine and Mercury Salicylate.

The Provincial Board still continues to manufacture and distribute Phenarsenamine and Mercury Salicylate and it is anticipated that sometime during 1925 the manufacture of some of the Bismuth preparations will be proceeded with.

The following table shows the distribution of Phenarsenamine and Mercury Salicylate:—

DISTRIBUTION OF PRODUCTS MANUFACTURED BY PHENARSENAMINE LABORATORY

FROM JANUARY 1ST TO DECEMBER 31ST, 1924

	Phenarsenamine		Mercury Salicylate		Sodium Hydroxide 15%		Sterile Distilled Water	Silver Nitrate
	Ampoules	Grams	Ampoules	Grains	Ampoules	Ounces	Ounces	Ampoules
SUPPLIED FREE IN ONTARIO:								
To Ontario Government Institutions	1,893	551.4	1,147	2,759	3	179	18,050	.....

6. *Investigations:*

(*a*) Travelling Diagnostic Chest Clinic.

The first work of primary importance undertaken by this branch of the Division after its inception was in connection with the survey of school and pre-school children in the Dundas and West Flamboro area. Only a brief reference was made to the survey in last year's report as sufficient material was not then to hand, but as the report of the Committee has now been assembled it is possible and thought advisable to refer to this matter at greater length, not only as far as the tuberculosis work is concerned, but also that of the non-tubercular.

The survey was carried on under the auspices of the Canadian Tuberculosis Association and the Canadian Red Cross Society, assisted by the Hamilton Medical Society and with the active co-operation of the Provincial Board of Health. It had for some of its objectives the following:—

(*a*) The desirability of attaining accurate information as to the extent to which tuberculosis is to be found among the children of Canada.

(*b*) The age at which children are mostly liable to become infected with the germ of this disease.

(*c*) The taking of such a survey in each Province would stimulate interest on the part of the physician and the general public in matters relating to the prevention of tuberculosis.

Results of the survey are summarized under the following heads:—

(*a*) Examining Staff.

Besides the local and central committees there were twenty-six general examiners, and seven eye, ear, nose and throat specialists employed.

(*b*) Schools with number of pupils examined:—

Dundas Public School	664	children
Dundas Separate School	110	"
Dundas High School	155	"
Millgrove Public School	66	"
Freelton Public School	64	"
Strabane Public School	38	"
Greensville Public School	66	"
West Flamboro	25	"
Governor's Road Public School	18	"
Glenwood Public School	14	"
S.S. 3, East and West Flamboro	52	"
S.S. 2, West Flamboro	25	"
Pre-school in Dundas	85	"
Miscellaneous	11	"
	1,394	children

(*c*) Over one thousand children were X-rayed and 1,321 intracutaneous tests were done.

(*d*) Summary of Non-Tubercular Defects:

465 children or 33 per cent. were seven per cent. or more under normal weight for their height and age; 250 children or 18 per cent. were ten per cent. or more under normal weight for their height and age.

504 children or 36 per cent. showed lymphatic gland enlargement.

120 children or 9 per cent. showed definite defective vision, while 141 additional children or 10 per cent. showed slight defective vision.

28 children or 2 per cent. had defective hearing; 24 or 2 per cent. had otitis media.

280 children or 20 per cent. were considered to have tonsils diseased, or diseased and enlarged; 201 children or 14 per cent. had already had tonsils removed but these were not included as defects in our summary.

324 children or 23 per cent. had definitely enlarged adenoids. Of this number, 277 or 20 per cent. were definite mouth breathers; 39 children or 3 per cent. were reported as having an enlarged heart. In 42 children or 3 per cent. heart murmurs were heard.

603 children or 43 per cent. had not been vaccinated.

(*e*) Summary of Tubercular Infection:

426 children or 32 per cent. gave positive tubercular reaction; 14 children or about 1 per cent. were classified as having active pulmonary disease.

In addition to the above survey a great deal of work was done by this branch of the Division in connection with the organization of Tuberculosis Clinics in various centres throughout the Province. Trips were made for this purpose to the following places:—

Wingham	London	Belleville	Haliburton
Guelph	Clinton	Trenton	Lindsay
Stratford	Brockville	Ottawa	Kingston
St. Mary's	Oshawa	Bancroft	

Below will be found a list of places visited by the Travelling Diagnostic Clinic with number of cases examined:—

Place	Cases Examined
Clinton	18
Picton	20
Hawkesbury	12
Rockland	14
Renfrew	14
Pembroke	14
Alexandria	60
Stratford	52
Schreiber	20
Port Arthur	28
Fort William	38
Fort Francis	18
Rainy River	15
Dryden	16
Oshawa	52
Coburg	17
Total	408

One hundred and thirty-one physicians referred these cases to the Clinic and the following is a classified report as to the findings:—

Cases in which pulmonary tuberculosis was not considered a factor, 194.
Cases that were considered suspicious and requiring further observation, 66.
Cases showing active pulmonary tuberculosis, 61.
Cases in which the disease was thought to be arrested, 44.
Cases showing cervical tuberculosis adenitis, 2.
Cases showing bronchitis and emphysema, 16.
Cases showing asthma, 5.
Cases of lung abscess, 6.
Cases of bronchiectasis, 8.
Cases of chronic empyema, 3.
Cases of siliessis, 2.
Unclassified cases, 1.

(*b*) *Smallpox:*

(1) Windsor Epidemic.

The following is a summary of the report of the epidemic handed in by the Board's Clinician who co-operated with the local authorities in the investigation of this outbreak.

The recent epidemic of smallpox in Windsor and vicinity has been of a particularly virulent type. The symptoms have been so irregular in character that some of the lessons learned may be of interest to the medical profession generally, and especially to medical officers of health.

History of the Epidemic.

The facts concerning the epidemic are briefly as follows:—

A mild epidemic of smallpox had been present in Detroit for the past three or four months. Owing to the proximity of the Border Cities, it was inevitable that cases of smallpox should appear in Windsor and other neighbouring municipalities in Ontario. Some cases developed as expected in the Border Cities but they were of a mild character, occasioned no alarm, and were promptly dealt with by the Health Department. An epidemic of malignant smallpox, however, broke out in Windsor about the middle of February following the death of a man suffering from an irregular type of haemorrhagic smallpox. This man, during his illness, was seen by several medical men of the highest reputation, but no one believed that the patient was suffering from a communicable disease. During his illness the man was visited by many friends and relatives and when death occurred his funeral was very largely attended. It was only when cases occurred in persons who had been in contact with this man that the diagnosis of smallpox was definitely made. These cases were of a particularly virulent and irregular type.

Number of Cases and Deaths.

The number of cases of smallpox in Windsor up to March 3rd was over 40, while the number of deaths was 12. The total number of cases in Windsor, Amherstburg, Maidstone and surrounding districts from the middle of February to March 3rd was 60, the total number of deaths in these places was 18. The total number of cases apparently due to the undiagnosed case of smallpox had reached 42.

Source of Infection of Original Case.

It has so far been impossible to determine the source of the infection of the original undiagnosed case. It may have been a mild type from the Detroit epidemic which suddenly took a particularly virulent form, or possibly an unrecognized case from the northern part of the Province where irregular types of smallpox are often seen. Whatever its source, the cases have all been of a very virulent form with a very high mortality.

Interesting Points.

The following points are of interest in connection with the epidemic:—

1. The first unrecognized case undoubtedly was one where there had been a sudden increased virulence in the type of the disease. It is probable that this was due to the fact that the person affected had never been vaccinated. As is well known, this has been predicted by medical men who believe that a mild type of smallpox was at any time likely to become more severe in character in an unvaccinated population.

2. The irregular character of the prodromal symptoms and of the rash.

Some of the cases gave no history of backache which is a common symptom; others complained of very severe pain in the back and were only relieved by extremely large doses of morphine, hypodermically. Some cases complained of severe headaches. All had moderately high fever and vomiting. Sore throat was a frequent symptom. The cases may be divided into three groups.

(*a*) Mild cases in individuals with a history of an old successful vaccination over twelve years ago, also an occasional unvaccinated case infected in Detroit.

(*b*) Severe semi-confluent and confluent cases—all in unvaccinated persons —some of these cases already have died and others are seriously ill. These cases live as a rule six to eight days and if they survive that length of time, recover.

(*c*) Haemorrhagic cases—these were all in unvaccinated persons and were all fatal. These cases were difficult to diagnose even with the information that an epidemic of severe smallpox was present. Some were at first diagnosed as appendicitis, others stone in the kidney and still others, scarlet fever and measles. Some of the haemorrhagic cases showed a typical "Lobster rash" as mentioned by Ker in his book on Infectious Diseases, others somewhat resembled the rash of scarlet fever though it was of a more dusky character and no other symptoms of scarlet fever were present. Still others showed a rash like measles but the other symptoms of measles such as dry cough, running eyes, and cold in the head, were absent.

All of these rashes were of course, prodromal rashes and in many cases the true smallpox rash was not seen owing to the patient's early death. Haemorrhage into the conjunctivae was a common symptom in these cases, also haemorrhages from the mouth, bowel and bladder as well as haemorrhages under the skin.

3. Severity of the epidemic and the value of vaccination.

The Medical Officer of Health of the Border Cities says, "this is the most severe epidemic of smallpox in Canada since the 1885 Montreal epidemic and the deaths among the unvaccinated persons suffering from the disease will run fifty per cent." He also says, "the value of vaccination as a means of prevention has been proved as never before."

4. Compulsory vaccination of school children.

The value of a by-law providing for compulsory vaccination of school children on entering school was shown and undoubtedly in this epidemic prevented the spread of the disease among children.

5. Vaccination of the general public.

The severity of the disease and the high mortality rate rendered it possible to vaccinate a large proportion of the population of the Border Cities. Roughly, two thirds of the population of the Border Cities, or 50,000 people, were vaccinated during the last week of February. There has probably never been a city which has been able to accomplish such a feat without the use of compulsory methods. The severity of the disease and the confidence of the people in the local health authorities undoubtedly made this possible.

Action by Local Boards of Health.

Local Boards of Health are urged to adopt the following measures whether smallpox is present in the municipality or not:—

(*a*) Urge general vaccination of the public.

(*b*) Have the local Board of Health require compulsory vaccination of all school children before admission to school. (See Vaccination Act, Sec. 13.)

(*c*) Notify medical practitioners to be on the watch for irregular cases of smallpox (especially cases of the haemorrhagic type).

(*d*) Arrange for a supply of free smallpox vaccine from the Provincial Board of Health.

2. *Whitney Epidemic:*

The Division was called upon to deal directly with an outbreak of smallpox which occurred in Whitney in October, 1924. Two trips were made to the village which is in unorganized territory, and every house in the place and for eight miles around was visited. About thirty cases of smallpox were found, nearly all of them being of a mild type. A total of 237 people were vaccinated, including the pupils of three schools. A Public Health Nurse was sent into the District to take over the situation and a local Sanitary Inspector was appointed temporarily to enforce quarantine and the placarding of the houses where cases occurred.

Many cases of scabies, impetigo, contagiosa and eczema were discovered and treatment was instituted in all cases. This treatment was watched and followed up by the Public Health Nurse who remained for several weeks in the vicinity.

(*c*) *Typhoid Fever:*

The Division was called upon to assist in the investigation of outbreaks of typhoid fever as follows:—

(1) Ontario Hospital, Toronto.
(2) Ontario Hospital, London.

(1) *Ontario Hospital, Toronto.*

Five cases of the disease occurred in this institution and an endeavour was made to locate the source of the infection. One hundred and seven Widal tests were carried out on all patients, nurses and attendants in the wards concerned, as well as the kitchen staff and food handlers. Six of these showed a typical reaction and a urine and faeces test was then done on these latter. One came back positive and the case was isolated and put under treatment.

(2) *Ontario Hospital, London.*

In the latter part of September three cases of typhoid fever developed at the Ontario Hospital, London. The Division was called in consultation *re* the locating the source of infection by Dr. McNally, D.O.H. Two of the clinicians from the Division were engaged in this work and the following is a brief summary of their report:—

On thorough investigation it was concluded that carriers were the source of the infection and a determined effort was made to locate these individuals, keep them isolated, treated with intestinal antiseptics until these were pronounced free from baccillus typhosus in their discharges. All the nurses, attendants, patients with previous history of typhoid, and those patients in direct contact with the three cases of typhoid were tested by the Widal reaction. A total of 312 Widal tests were made and examined by the laboratories at London and Toronto. Of these 312 Widal sixty-one were found to be positive and 251 were negative. Of these sixty-one patients with positive Widals, urine and faeces examinations were made and repeated for the detection of bacillus

typhosus. A total of 148 such tests were made and five cases were found to be carriers. These cases were isolated and treated with intestinal antiseptics. Recommendations were made also, and acted upon, to rid the kitchen of flies, and the possibility of doing away with the common roller towels in the wards, as with this type of patient it was difficult to enforce proper hygiene measures. No further cases of typhoid developed in the institution.

(*d*) *Milk Supplies:*

Dairies and the general handling of milk supplies were inspected in the following town:—

BOWMANVILLE.

(*e*) *Goitre.*

Relative to the treatment and prevention of goitre the Provincial Board has approved the proposal to add .01 per cent. potassium iodide or sodium iodide to domestic salt. All the salt manufacturing firms in Ontario have been so notified.

7. *Social Service:*

(*a*) Follow-up Work:—

(1) Letters.
(2) Returns of Death from Syphilis.
(3) Sources of Infection and Contacts.

(*b*) Educational.

(*a*) Follow-up Work:—

(1) Letters.

During the year letters were received concerning approximately 400 persons suffering from venereal diseases. For many of these, arrangements were made for their treatment to be carried on in near-by clinics or by local medical officers of health.

(2) Returns of Death from Syphilis:—

Still-born, 3.
2 cases, mother under treatment.
1 case, parents not located.

Congenital Syphilis, 17.
3 cases, mother under treatment.
2 cases, unable to locate parents.
8 cases, under investigation.
2 cases, mother under treatment, father negative.
1 case, parents under treatment.
1 case, father under treatment.

Acquired Syphilis, 31.
20 cases under investigation.
4 cases, diagnosis doubtful.
4 cases, no contacts.
1 case, contacts negative.
1 case, father and son under treatment.
1 case, four children negative.

(3) Sources of Infection and Contacts.

The following figures are interesting, as showing the work done by Social Service Nurses in following up contacts and sources of infection.

Referred by—
Self, 377; Health Department, 311; hospitals, 206; other clinics, 156; doctors, 489; social agencies, 81; friend, 312; films, etc., 18; Government posters, 35; exhibits, 21; gaols, 67; police, 93.

Alleged Sources of Infection Investigated—
Syphilis—positive, 142; negative, 97; total, 239. Gonorrhoea, positive, 121; negative, 53; total 174. Grand total, 413.

Number contacts located—
Syphilis—positive, 113; negative, 336; total, 476. Gonorrhoea—positive, 73; negative, 110; total, 183. Grand total, 659.
Visits by Social Service Nurses, 7,890.
Number of patients lost, 852.

(*b*) *Educational.*

Educational work was carried on very extensively during 1924 by means of moving pictures, films, exhibits, lectures and the distribution of literature. The following is a summary of the work done by the Social Service Nurse in this connection—

Out-of-town trips, 44.
Visits to out-of-town clinics, 20.
Number of times films shown, 168.
Attendance at showings, 27,112.
Other meetings, 30.

Special exhibits illustrating work of the Division were held at Canadian National Exhibition, Toronto, Peterborough, Sault Ste. Marie, Brantford, Hamilton, Ottawa.

Letters for the year:—
Incoming letters, 4,073; Outgoing letters, 3,383. Total, 7,456.

I wish to thank the members of the Division for the cheerful co-operation given during the year and the clerical staff for the able manner in which they assisted in carrying on the routine office work of the Division.

ANNUAL REPORT, 1924, TO THE DEPARTMENT OF HEALTH FROM THE DIVISION OF INDUSTRIAL HYGIENE.

J. Grant Cunningham, M.D., D.P.H., Director.

The prevention of disability among wage earners is the objective of the Division of Industrial Hygiene.

Prevention involves, first, the dissemination of information bearing on the costly waste resulting from disability; and, second, the stimulation of means to cut down this waste.

In the United States the accredited means is the establishment of industrial health service in plants and there are signs that the American system is spreading to Great Britain, supplementing the system there which hitherto has confined

itself to legislation and the efforts of lay and medical factory inspection. In addition to the establishment of industrial health services in plants, clinical and laboratory facilities for research into specific health problems in industry are necessary.

Along these two lines, dissemination of information as to the extent of disability and stimulation of efforts to cut down disability, it is considered that a satisfactory beginning has been made.

Increasing interest and activity among employers and employees is manifested in the following ways:—

(1) The number and type of inquiries received by the Division on problems affecting the health of the workers; for example,

(*a*) Request that the Division measure the amount of lead in air in order that additional cases of lead poisoning may be prevented.

(*b*) Request that the Division measure the amount of benzol in air with a view to determining whether present preventive measures are adequate.

(*c*) Request that the Division study plant conditions, including ventilation, with a view to reducing the lost time from colds and other respiratory diseases.

(*d*) Inquiry as to details for the development of industrial health service in a rubber plant and in two pulp and paper plants.

(*e*) Inquiry as to means of prevention of a skin disease which appeared in artificial silk manufacture.

(*f*) Inquiry into the effect on health of the use of second-hand material in mattress manufacture.

(2) Increase in the number of plants recording lost time from sickness: These records are of first importance for they constitute a starting point from which to do effective preventive work. It is impossible to prevent sickness unless the types of sickness occurring and the kinds of work which the men do are known.

Six plants have supplied the Division with records of sickness occurring in their plants during the past year.

There is gradually being accumulated in Ontario a record of sickness, experience in industry which has not existed previously. This avoids the need of turning to other countries for such experience and provides data having considerable more weight with industrial executives.

(3) To an increasing extent prevention of sickness among wage earners is being discussed in manufacturers' and trade journals and in labour papers.

(4) The number of nurses employed in industry is steadily increasing. Their most striking contribution lies in the reduction of infection of industrial injuries, but even here the reduction of ninety per cent. in both the number of cases and lost time from infection is not accomplished without sufficient interest on the part of employer and employees to see that every case of injury reaches the dispensary at once.

This Division has co-operated with the Child Welfare Division in demonstration given in municipalities having one industry as the centre of activity. These demonstrations have resulted in the employment of nurses at two points in the last year to do combined industrial and community nursing.

(5) There has been an increase in the number of physicians associated with industry. While the great majority of physicians still only come into

touch with industry when they are called to treat a worker injured during his employment, yet there is an increase in the number of physicians who are employed on a part-time basis, with some responsibility for health work done in the plant and with corresponding opportunity to apply the principles of preventive medicine in the maintenance of the health of workers. They may be employed as physicians to plant benefit societies, where on account of records kept reduction in lost time from sickness is at once apparent; or as part of a definite programme instituted by industrial executives for the prevention of sickness, entirely apart from its treatment. The latter is a much more satisfactory arrangement.

An encouraging feature is the fact that a few physicians not directly connected with any plant have submitted problems which they have noted as appearing among a group of private patients presenting similar symptoms, a common factor being their work.

Physicians coming in touch with industrial workers have submitted to the Division during the year such requests for information or help on the following points:—

(*a*) The hazards of electric welding.

(*b*) Infection of wounds in abattoirs.

(*c*) Details for the method of introducing and conducting periodic physical examination of workers.

(d) Inquiry into the cause and means of prevention of a skin disease occurring among fishermen on Lake Erie and associated with fish slime. Bacteriological examination has produced some interesting results which are not yet completed.

(*e*) Request for the special examination of blood smears taken from men exposed to lead.

(*f*) Request for the examination of men exposed to silica dust in quarrying to determine the presence or absence of silicosis.

Industrial Health Education

The Division has prepared and published articles for various journals and papers, technical and popular, dealing with different phases of the subject. Examples of titles with their distribution follow:—

"Industrial Hygiene," a general article published in Social Welfare.

"What Is Being Done for the Worker's Health," published in a labour paper.

"Lost Time from Sickness," published in Industrial Canada, the Canadian Manufacturers' Association journal.

"Industrial Hygiene and the Medical Profession," published in the Canadian Public Health journal.

"Cancer as an Industrial Disease," published in the Toronto Star Weekly.

"Fatigue and Industrial Accidents," published in the Y.M.C.A. Bulletin.

Articles on different phases of the subject for use in the Wilson publications covering over two hundred newspapers in Ontario and appearing weekly.

The publication entitled "Health Confession of Business Women," by Business Women, has been well received. It has been favourably reviewed in Canada, England, and the United States. Over 12,000 copies have been distributed during the past year and requests are still coming in steadily.

This part of the Division's work, in addition, concerns itself with summaries of the literature on various health questions submitted, such as a review of

recent literature on paint hazards, a list of topics suitable for health articles in plant papers, memorandum on the health hazards involved in wallpaper manufacture; and with the study of problems affecting the work of the Division itself; for example, workmen's compensation and insurance in Canada and the United States in its relation to the prevention of disability from sickness and accident, and vocational guidance as a factor in sickness prevention.

Addresses have been given by different members of the Division to medical groups and employee groups during the year.

Mr. D. R. Wilson, Secretary of the Industrial Fatigue Research Board, London, England, and Dr. Wade Wright, formerly in charge of the Massachusetts General Hospital Occupational Disease Clinic, during visits to Toronto have materially assisted in furthering interest in different aspects of industrial hygiene locally.

Occupational Diseases.

Schedule 3 of The Workmen's Compensation Act contains a list of seven occupational diseases for which compensation is paid. Reports received by the Division show that twenty-two cases of occupational disease were compensated during the year. By the Regulation of The Workmen's Compensation Board, dated December 24th, 1924, stone worker's or grinder's phthisis due to employment in quarrying or in cutting, crushing, grinding, or polishing of stone, or in grinding or polishing of metal; and benzol poisoning due to employment in any process involving the use of benzol were added to this list. This is of considerable importance.

When silicosis is sufficiently far advanced to produce disablement the condition proceeds progressively and fairly rapidly to a fatal issue. To be effective in the prevention of permanent disability compensation should be paid before the condition becomes disabling.

Of interest in connection with the occupational disease side of the Division's work has been the activity of the Occupational Disease Committee of the Ontario Medical Association in the effort to further information among practitioners as to the incidence and diagnosis of occupational diseases. The Division has prepared two memoranda, one dealing with the diagnosis of lead poisoning and one dealing with nickel rash, for distribution by this Committee to the profession in Ontario. By request a programme dealing with different phases of industrial hygiene is in course of preparation by this Division for a meeting of the Committee to be held early in the new year. The efforts of Dr. V. E. Henderson, Chairman of the Committee, has been responsible for this activity to a great extent.

Clinical Investigation.

Clinical investigations are of two types:—

(1) The investigation of individual cases, generally referred to the clinician of the Division by individual physicians. These involve examination of the patients, in addition to an investigation of conditions under which they have worked. Cases in this group include mainly poisoning from lead and benzol and the effects of the inhalation of silica dust.

(2) The second type consists of surveys of groups of plants in different industries, to include the examination of conditions of work and the examination of the men exposed to hazardous substances. These are:—

(*a*) Investigation into the hazards of the rubber industry: Complete examination was made of 140 workers exposed. These examinations revealed eighteen workers showing definite effects of the exposure to lead, seventeen

other workers showing effects of the exposure to benzol, and three workers with effects attributable to carbon tetrachloride.

(*b*) An investigation into the extent of silicosis among men who had been employed in a silica quarry. This was limited because of difficulty in getting the men together, since plant operations there have ceased temporarily. The results showed one case of advanced silicosis (this patient has since died), two cases in the second stage, and one case in the first stage. Arrangements have now been made to conduct examinations of the other men exposed in this quarry.

In the work on silicosis the tuberculosis specialist of the Department has assisted and in turn received assistance in the tuberculosis clinic.

(*c*) Help was rendered in a third investigation which was a duplicate of an investigation conducted a year ago wherein men exposed to benzol fumes were re-examined to determine whether they were being affected. Of seventeen men in this group three were found to be suffering from benzol poisoning. This investigation was initiated and paid for by the employer.

(*d*) Two similar small investigations were made in two plants using lead. Eighteen men who were exposed were examined. Of these eleven showed some effects but in no case had disability resulted.

Laboratory Investigation.

Mr. H. E. Rothwell was appointed in April, 1924, to succeed Mr. W. E. Green, resigned, as chemist for the Division's work. Mr. Rothwell's qualifications and long experience as an industrial chemist make his appointment very suitable. His activities deal with the identification of substances used in industrial processes with possible hazards to health, with means for their collection and estimation and with chemical analysis required for clinical cases encountered in both the clinical and research phases of the work.

As indicated in last year's report, the Division is confronted from time to time with occupational disease conditions for which no adequate means of prevention exist. To assist in meeting this situation approval was received for the appointment in February, 1924, of Dr. F. M. R. Bulmer. Dr. Bulmer's training in research work gives him a very desirable background, even though he will be called upon to deal with causes of diseases only in so far as this is necessary for the development of preventive measures.

As a result of these appointments the laboratory facilities of the Division have been improved materially and the following work has been undertaken jointly:—

(1) Inquiry was made into the problem of so-called "nickel-rash", a skin condition occurring among workmen employed in nickel refineries and in plating cutlery, skates, automobile parts, etc. It is characterized by intense itching, generally starting at some point of the body exposed to chronic irritation, for example, where the cuffs rub the wrists.

After examination of the literature on the subject, a method was developed for the detection of nickel in small amounts in organic material, capable of detecting nickel in one part per million.

Complete examination was made of each case of nickel rash, including the urine and blood analysis. This led to the discovery of a substance hitherto unknown in the blood. At first this was thought to be peculiar to persons suffering from nickel rash. Further investigation showed its presence in all bloods in varying amounts. Findings have been reported and will be published in the Journal of Biological Chemistry for February, 1925, under the title, "Uric Acid Determinations," Bulmer, Eagles, and Hunter. Mr. B. Eagles

and Mr. George Hunter of the Department of Pathological Chemistry of the University of Toronto collaborated in this work.

Plant conditions were carefully investigated, especially ventilating conditions, because the rash is more common in warm weather. The specific cause of the rash has not yet been found but the measures for prevention which were temporarily recommended were at least partly responsible for a reduction in lost time from nickel rash at the plant of the International Nickel Company, Port Colborne, from 4,160 days in 1923 to 504 days in 1924, only 204 days of which occurred after this investigation was commenced. The International Nickel Company has assisted materially in making this possible.

In addition, many plants conducting nickel-plating operations were visited, after the subject had been discussed with the Canadian Branch of the Electric Platers' Society. Study of the problem is being continued.

(2) Because of its obvious public health importance, a short investigation was made into the question of the contamination by nickel of food prepared in nickel dishes. Nickel dishes were used for cooking purposes and portions of the food analysed showed that an individual on ordinary diet made up of food cooked in nickel dishes would receive about 100 milligrams, or about 1/280 oz. of nickel per day. Nickel is regularly found in some articles of food, such as spinach, and in edible fats in the preparation of which nickel is used as a catalyser. The amounts are very small and appear to be harmless but the question of the effect on health of eating food cooked in nickel dishes requires further investigation.

(3) An important feature of Professor Leonard Hill's recent fundamental work on ventilation is the development of the katathermometer—an instrument calculated to measure the adequacy of ventilation.

The influence of ventilation has touched the work of the Division in two points:—

(*a*) In the investigation of nickel rash which is more common in warm weather, probably partly due to the low cooling power of the air, which throws strain on the heat regulating mechanism and may affect the skin exposed to chemical substances.

(*b*) In its relation to the very high incidence of respiratory diseases among industrial workers.

For this reason considerable field work has been done with the katathermometer to determine how far it may be used in developing preventive measures for these conditions. This work involves the study of plant conditions and of the health of workers under present and improved conditions of ventilation over periods of many months.

(4) A suitable method for the detection of benzol in air has occupied attention. The number of cases of benzol poisoning coming to light is increasing. It can become rapidly fatal. Even when benzol is present to the extent of only 15 parts per million parts of air it produces poisonous effects. These considerations make it at once desirable and difficult to be able to determine the degree of exposure of men working with it. No suitable method for this purpose exists but results of the work being done at present hold some promise.

(5) The real need for a satisfactory fumigant against bed-bugs, cockroaches, etc., in the bunk houses of lumber and pulp camps has prompted inquiry into the use of cyanogen chloride. Its value lies in the fact that it has a tear gas effect in concentrations which are not poisonous, so that ample warning is given to leave the premises. Cyanogen chloride has been used by the United

States Public Health Service for ship fumigation. Experiments in the Division show that it is slower in action than hydrocyanic acid and that the condition of the raw materials used, especially sodium cyanide, is of importance in producing results. It may be that the warning that the tear gas gives will drive away these insects temporarily without killing them—a condition which does not apply in the fumigation of ships. This work is proceeding.

Unorganized Territory.

The work of the Chief Sanitary Inspector which deals almost entirely with industry is separately reported. In the unorganized territory physicians are brought into closer touch with industry than elsewhere in Ontario, due to the Provincial Department of Health regulations—particularly those requiring camp health supervision. This closer contact can readily be extended without legislation when employers and employees more fully realize the advantages to be derived from sickness prevention.

As a beginning, some records of lost time from sickness have been accumulated in certain pulp and paper plants and in one of the largest of these both the workers and the management have gone on record as favouring the development of an effective health service, to include first aid in sickness and accident, periodic physical examination, health education and the supervision of conditions of work. It is felt that the results to be obtained from a programme of this kind operating in the plants of one company would demonstrate to other companies as no other method could the value to be derived from a very extended health supervision.

Recommendations.

(1) There is serious lack of co-ordination between the different government bodies at present concerned with the worker's health, especially The Workmen's Compensation Board, the Factory Inspection Branch of the Labour Department, and the Industrial Hygiene Division of the Provincial Department of Health.

A first-hand study should be made of the different methods of factory medical inspection in England and in some countries of Europe, with a view to judging how best industrial health activities can be administered. It should be possible to build up a service which could co-operate with industry in the prevention of disability.

(2) Serious consideration should be given to the recognition of the idea that the prevention of accidents and occupational diseases is a necessary part of the Workmen's Compensation law. The Workmen's Compensation Act in Ontario at present is not the potent influence for the prevention of disability among workers which it should be. The employer who effects a real reduction in accident cost in his plant pays for his efforts in prevention and at the same time continues to pay a high percentage of his compensation cost. This tends to destroy the initiative to cut down disability.

(3) There is need of some system for notification by physicians of cases of occupational disease.

(4) Legislation should be brought in providing for compulsory periodic physical examination of exposed workers in:—

(*a*) Certain lead trades; for example, storage battery manufacture.

(*b*) The chief trades where benzol poisoning is a hazard; for example, the rubber trade.

ANNUAL REPORT—DIVISION OF PUBLIC HEALTH EDUCATION

J. J. Middleton, M.D., D.P.H., Director

Writing weekly health articles published by 220 newspapers mostly in the rural sections of the Province, answering correspondence from inquirers throughout the Province on all kinds of health topics, checking reports of Medical Officers of Health on the sanitary inspection of schools, issuing pamphlets, including the Health Almanac, preparing the programme for the Ontario Health Officers' Association, editing and proof-reading the Annual Report of the Provincial Department of Health, supervising the preparations of exhibits for the Canadian National Exhibition Health Exhibit, addressing public health meetings from time to time—these were the main activities of this Division during the year 1924.

In addition to routine duties, the chief work of the Division during the early part of the year was the distribution of the Public Health Almanacs, 20,000 of which were printed. Covering letters were sent to the secretaries of all the women's institutes throughout the Province, requesting their co-operation in the distribution of the Almanacs. It was thought that through the agency of the Women's Institutes was a practical way of sending this piece of literature to the rural sections of the Province and the results have been most gratifying. The co-operation of the Women's Institutes was very cheerfully given and the Division's thanks was tendered to Mr. Putnam, the Superintendent, for having typed all the addresses of the various branch institutes scattered far and wide throughout the Province. The Women's Institutes are of great assistance in the distribution of health literature to those in rural sections who are hard to reach.

During the months of July and August, a special series of health articles and health bulletins was written for the newspapers in Alexandria in connection with the health week held in that town in August. The Health Week was carried out by the various divisions of the Provincial Department of Health working in co-operation and was a pronounced success.

In March, 1924, the director of this Division went to Raleigh, North Carolina, to investigate the workings of the County Health Officer Scheme which has been in vogue there for some time. A detailed account of the information gathered on this visit was presented to the Chief Officer of Health. It was also published in the Canadian Practitioner and Review.

The Health Exhibit at the Canadian National Exhibition in 1924 was a spectacular display of the various activities of the Provincial Department of Health. New features were added in the form of a tuberculosis exhibit, very elaborately constructed, showing the different ways in which tuberculosis is spread, and the steps that should be taken to bring about recovery. There was also a striking exhibit in the Department of the Registrar-General, consisting of a large clock with long pendulum illustrating in a graphic manner the number of births, marriages and deaths taking place at every tick of the clock. There was also a series of striking models showing the activities of the Public Health Nurse and the work she does. Methods of preventing the spread of communicable diseases were also shown and a rotating house was on display showing the value of ventilation. The Division of Sanitary Engineering had an interesting and practically useful exhibit showing the arrangements of plumbing work for ordinary dwelling houses, as required by the Provincial Department of Health.

Interesting papers and important discussions featured the programme of the Tenth Annual Conference of the Ontario Health Officers' Association, held in the Physics Building, University of Toronto, on May 20th, 21st and 22nd.

Perhaps one of the most outstanding contributions to the programme was an address on "The Cause and Prevention of Simple Goitre," by Dr. David Marine, Associate Professor of Pathology in Columbia University, New York City. Dr. Marine advocated the introduction of a small percentage of iodine in all salt used for domestic purposes as a means of preventing goitre. The exact amount he suggested was 1/13 of a grain of iodine per pound of salt. Dr. Marine was emphatic in his assertions that this was the most logical way in which iodine could be taken, first because it would be taken by almost everybody, the use of salt being universal, and secondly, because the amount taken per day is so small that no serious results from an overdose of iodine could possibly occur. He emphasized the fact that prevention of goitre did much more than eliminate deformities of the neck. Ninety-five per cent. of the cases of cancer of the throat were attributable directly to goitre, and prevention of the enlargement of the thyroid would also involve the prevention of forms of physical and mental degeneration. Futhermore, there was evidence that goitre sufferers were more susceptible to hardening of the arteries than those who had not the disease, and that the disease tended to hasten senile decay. It was in the light of such facts as these, he contended, that modern society should approach the question of goitre prevention.

Honourable Dr. Forbes Godfrey, Minister of Health for Ontario, announced that within a year he hoped to be able to demonstrate positive cures in a series of goitre cases. "I am not quite satisfied yet," said Dr. Godfrey, "but I intend to give my views possibly next year. Maybe I will have the nerve to give you then a series of cases that were positively cured. I have my clinical material for a period of five years, but I am going to make sure before I speak."

Mr. F. A. Dallyn, Sanitary Engineer of the Provincial Department of Health, said that since the question of goitre prevention was raised a year ago, a thorough examination of salt found and used in Ontario showed no iodine content. Dr. Marine explained that simple goitre occurred endemically chiefly in districts where there are soils composed of deposits of the last glacial epoch on this continent, which contained little or no iodine.

Dr. Hastings, Medical Officer of Health, Toronto, gave an interesting paper on "The Care of the Mentally Subnormal." "It is all very well to talk about developing and multiplying, but we must remember that man's superiority over the rest of creation is due to those mental qualities which he alone of all the animals possesses," said Dr. Hastings. "What are our intellects for? Are we going to use them to protect our own race, or are we going to use them only on lower animals?"

During the discussion which followed the reading of this paper, Dr. H. W. Hill, of Western University, London, uttered a word of warning about race degeneration. "Statistics show," said he, "that the population of the world will have doubled in anywhere from 59 to 70 years. What kind of people is this doubling going to give?" "It has been stated by an eminent authority that in 200 years the descendents of 1,000 Harvard graduates of to-day will have dwindled to 50, and that during a similar period, 1,000 Southern Europeans will have multiplied to 100,000." "Why, if that goes on, the subnormals will be sending the people of normal intelligence to the asylums 200 years from now. And that's not an exaggeration. "Conditions were much like that in the Dark Ages, when the intellectuals were forced to seek refuge in monasteries and

similar retreats," added Dr. Hill. "Sterilization of the mentally defective is the only solution. Segregation is impossible. The State of Minnesota tried it, spent all the money it could afford, and segregated only 1,700 out of a total subnormal population of 25,000. Sterilization is the only solution if the whole human race is to survive as human and not as animal."

Dr. C. N. Laurie, Medical Officer of Health, Port Arthur, and Dr. James Roberts, Medical Officer of Health, Hamilton, supported sterilization, but Dr. Lacoste, Medical Officer of Health, Tecumseh, was opposed, because it would be an indirect form of birth control, "and I contend," said he, "that that system would be anti-christian and anti-social." There is no real problem in this question of the extent and the kind of increase of population. If you are worried, look at the rate of murders in Detroit, for instance. Providence, which is ruling, will take care of that problem through earthquakes and wars, which we can never stop no matter what we may do." He then suggested that their energies had better be directed against agents which caused mental and moral perversion, among which he included the yellow press and the moving picture. Caution was also advised by Dr. A. S. Thompson, Medical Officer of Health for Havelock. Dr. Hill, adding to his previous argument, said he couldn't understand why one of our great churches should be so opposed to birth control when that church has enforced birth control on the most intelligent members of its own community for hundreds of years. Compulsory celibacy is a form of birth control. The church has enforced that form of birth control on its best and strongest. All we are asking for is birth control against the very poorest of our race."

"I am quite in sympathy with the opinion of Dr. Hill," said Dr. Hastings. "We should not lose sight of the fact that all our churches were blaming the Almighty for all the deaths due to typhoid fever a few decades ago. Now they have to admit that we cannot throw the responsibility on the Almighty, or otherwise we will have to say that we have been able to beat the Almighty. We have brought the typhoid rate down from 40.8 per 1,000 to 1.4, and if we can say the Almighty was responsible before, we will have to admit that all of those we have saved have disappointed the Almighty. I say that in all reverence. If medical science had not persevered, the Almighty would have been accused of taking those other 39. I do think that with the advance of medical science, we are big enough and manly enough to shoulder our own responsibilities and use our own intellects."

"I am not afraid of the bugbear of birth control," said Dr. Roberts in closing the discussion. "It is foolish to run away from it, for it is being practised in inverse ratio to the intelligence of the population. The people who are practising it are the best people, the people who should be having children, and the unfit are not."

In reading a paper on "The Recent Typhoid Epidemic in Cochrane from the Medical Aspect," Dr. C. Fenwick, of the Provincial Department of Health, declared that over 81 per cent. of the cases were in persons who had never been inoculated against typhoid fever. Most of the other cases were inoculated in the early stages of the disease. Liquor in the form of brandy, he said, was freely used with satisfactory results as a food and stimulant. Adrenalin was used successfully in the control of the fever.

Dr. W. E. George, District Officer of Health, said that during the typhoid epidemic at Cochrane, certain unfair imputations were made against the Provincial Department of Health and the town authorities. The epidemic was caused, he said, by the sudden, unexpected change of levels in the lake into

which the town's sewage was drained, causing a back flow and polluting the water supply. There was no previous history to indicate such an occurrence, and consequently no warning was possible. In Cochrane there were 832 cases and 59 deaths. Shorter illness and more rapid convalescence marked the cases of those who had been inoculated. Dr. George also showed that seventeen days after it was started to chlorinate the water, the epidemic practically came to an end, pointing out that seventeen days is the normal incubation period.

Discussing the need for and justification of state aid for permanent full-time county public health organizations, Dr. J. W. S. McCullough, Chief Officer of Health for Ontario, said that the present Ontario Government is very friendly towards any measure looking to better health and better health-preserving organizations. He intimated that Honourable Dr. Forbes Godfrey, Minister of Health, is in favour of the establishment of such county organizations, with aid from the Province. Dr. McCullough was diffident of making a statement committing the Government, but he indicated that the matter has been discussed officially and may bear fruit. He said that a good start could be made by inducing counties to take their present expenditure for health as a basis for building up permanent county organizations. He condemned the present part-time system as being inefficient and wasteful. It was left in the hands of the President, Secretary, and Dr. McCullough to appoint a committee to investigate the whole problem and report to a subsequent congress. Condemnation of most public health services because of the loose organization and the uncertain tenure of officers featured the paper of Chief Provincial Health Officer, Dr. J. W. S. McCullough. His paper forecast the amalgamation of all branches of public health endeavour, including school inspection and supervision of hospitals for the insane. Discussing our system in Ontario, the speaker said: "The weak spot is that of 904 officers but eight are full-time men, the rest being practising physicians largely without public health training, poorly paid, whose business in life is not public health work, but the practise of their profession. Such men are hampered by the danger of the loss of practice, jealousy and the lack of co-operation by confrères with whom the Medical Officer of Health competes in his practice, and the general unpopularity of the coercive measures sometimes necessary in the control of communicable diseases."

Some $40,000 is paid out to full-time officers and $217,000 to part-time officers. The great fault of a part-time service, he said, is that little can be done towards preventing outbreaks of disease, most of the effort being directed toward clearing out outbreaks which could have been inexpensively nipped in the bud.

While he admits that part-time men often do excellent service, Dr. McCullough said: "In the majority of the municipalities with a part-time service, the results are most unsatisfactory. There is no well-directed effort in the lines of public health; outbreaks of disease are attacked at the wrong end; there is no education of the public along sanitary lines, and, in short, the service given is most inadequate and a great deal of money spent is wasted. In many of our counties the expenditure runs to $12,000 or $15,000, which, under proper direction, would be productive of first-class results.

"The result of English experience is the adoption of a full-time system for confined areas, with Government assistance." Concluding, Dr. McCullough deplored the apathy of the public in co-operating in building up a more efficient health service.

Dr. F. L. McCarroll, Health Officer of the Espanola Pulp and Paper Mills, gave a paper on Industrial Health, expressing the conviction that the time

will come when all large industries will have their own health officer and nursing staffs, and he expressed the view that medical men so appointed should supplement their professional training by a thorough study of the industrial processes in his plant. Inroads of occupational diseases can thus be checked, and more readily understood. He claimed a great saving for his company by the operation of his department in the plant and town at Espanola.

Dr. A. Y. MacNair, of the Peterboro Laboratories, told of results of the Schick Test and toxin-antitoxin treatment among school children.

Drs. H. K. and R. M. Box, of Toronto, discoverers of the new treatment for Pyorrhoea, opened one session of the conference with a talk on "Oral Hygiene." "Mouth hygiene," said Dr. R. M. Box, "is of first and vital importance to general health, but too little attention is paid to it." Dr. Box described in some detail the best method for brushing teeth with a brush about one inch long, the bristles one-half inch long. The brushing edge should be saw-shaped to penetrate well between the teeth. In addition, he said, to remove foreign substances from the teeth and gums, the brushing should stimulate by a massage process, as it were, of the inner gum tissues. Following, there ensued a discussion led by Dr. Harold K. Box, which stressed the necessity of properly brushing the teeth. It is not enough to brush the inner and outer surfaces of the teeth. The brush must also be brought down in such a manner as to clean the tiny orifices between the teeth and the gums at the top. Honourable Dr. Forbes Godfrey spoke briefly after Dr. Box, stating that after the two schools of thought respecting teeth diseases, he came to the conclusion that Dr. Box should, as a young Canadian, receive the credit due him. He agreed that training in the use of the tooth brush has been faulty. He described the proper brushing system as a shimmy. "Harold K. Box is a genius," declared Dr. Godfrey, "and may have the eccentricities of genius, but he has certainly revolutionized the science of oral hygiene."

Dr. Adam Wright, Chairman of the Provincial Department of Health, presented an interesting paper on "The Prevention of Appendicitis and other Intestinal Diseases." "It is generally acknowledged that constipation is harmful, but very few have an intelligent conception of its meaning. The majority do not even know when they are constipated," contended Dr. Wright. "As a result of stasis or stagnation in the bowels, we get intestinal toxaemia, which leads to all sorts of physical and mental trouble." Dr. Wright emphasized the importance of a well-balanced diet in the treatment of these conditions. "I think it very fortunate," said he, "that we are rapidly accepting the opinion largely through the teaching of surgeons, that the treatment of intestinal stasis (or chronic constipation) is within the province of the general practitioner." Dr. Wright said that, contrary to his early teaching, he had now come to the belief that the taking of mild laxatives regularly was not harmful in a great majority of cases, and certainly it was much more advisable than to suffer the ill-effects of chronic constipation.

Dr. G. C. Brink averred that the success of the Province's travelling diagnostic clinics on tuberculosis depends almost entirely upon the follow-up work of family physicians, especially in rural districts, where hospital or other permanent clinics are not available.

Dr. G. E. Smith, Toronto, told the congress that his opinion is that prospective mothers have not been properly instructed in the past in the most advantageous methods of breast-feeding. Most trouble occurs during the first six weeks after birth. Artificial feeding, he said, is justified only when the supply of natural milk fails. Methods of stimulating the supply were discussed.

Care of the tonsils and adenoids in children from 2 to 5 years old, said Dr. A. P. Hart, of Toronto, will prevent many of the cases of heart trouble, rheumatism and other allied ailments which have replaced tuberculosis as the most prevalent causes of death on this continent. Such causes are behind one death in each fifteen in America, he said. Dr. W. J. Bell agreed that young children are peculiarly susceptible to infection, so that every family physician, he declared, should be an expert in child hygiene. He specially stressed the importance of breast-feeding as a guarantee of future health, and said that where artificial feeding is necessary, cow's milk should be used.

Officers were elected as follows: Honorary President, Honourable Dr. Forbes Godfrey; President, Dr. C. N. Laurie; 1st Vice-President, Dr. F. Adams; 2nd Vice-President, Dr. T. W. G. McKay; Secretary, Dr. J. J. Middleton.

The following committee was chosen to act in the study of a full-time system by counties for medical officers: Dr. Radford, of Galt, Chairman; Dr. Hutton, of Brantford; Dr. James Roberts, Hamilton, and Dr. T. W. G. McKay, Oshawa.

I would again like to emphasize the necessity of having a public health teacher for this division, whose services would be available for field work in the Province, and thus endeavour to keep up a continued interest among the public in health matters by giving addresses to Women's Institutes, Daughters of the Empire, Mothers' Meetings, school children, etc. Such a method of education would in my opinion have excellent results.

ANNUAL REPORT—DIVISION OF LABORATORIES

C. M. Anderson, M.D., D.P.H., Director

I have the honour to submit the following report and tabulated statements of the work of the Public Health Laboratories for the year 1924.

Table I

Table showing number of specimens examined at the Main Laboratory and the eight branch laboratories, throughout the Province for the year 1924.

REPORT FROM LABORATORIES OF THE

Laboratories at	Diphtheria cultures	Tuberculosis sputum	Typhoid Blood	Wassermann reaction	Kahn Precip. test	Colloidal gold	Spirochetae pallida	Rabies (dogs' heads)

TABLE II

Table showing the total specimens examined at all laboratories during the years 1911, 1922, 1923 and 1924.

Laboratory at	Year			
	1911	1922	1923	1924
Toronto	5,750	31,857	32,675	40,872
London	.....	11,828	12,198	14,546
Ottawa	.....	.....	12,007	12,397
Fort William	.....	5,197	5,952	6,199
North Bay	.....	2,755	4,004	6,186
Kingston	.....	5,761	4,926	5,725
Peterborough	.....	4,197	3,682	4,518
Sault Ste. Marie	.....	6,387	4,349	4,419
Owen Sound	.....	1,752	2,052	2,117
Total	5,750	69,724	81,845	96,979

From analysis of the above tables the following points should be noted:—

(1) That nearly 100,000 specimens were examined by the Public Health Laboratories during the year 1924.

(2) That the total specimens examined at all laboratories showed an increase of 15,134 over the previous year.

(3) That this increase is mainly accounted for by increased activity at the main laboratory at Toronto and the branch laboratories at London and North Bay.

(4) That at the Main Laboratory alone there was an increase of over 8,100 specimens.

(5) That the volume of work at the laboratory at North Bay increased by over fifty per cent.

TABLE III

Table showing outfits, vaccines and treatment supplied during the years 1922, 1923 and 1924 from the Main Laboratory, Toronto.

OUTFITS, VACCINES, AND TREATMENTS SUPPLIED BY LABORATORY

At Toronto, Years 1922-23-24

1924	29,220	5,000	2,906	14,652	4,396	3,547	766	332	60,819	26,661	51,385	25,471	8,008.5	13,235	5	105

I.—Bacteriology.

(*a*) *Diphtheria Cultures.*

You will be pleased to learn that during the past year we have not received a single complaint in connection with the examination and reporting of diphtheria specimens. This is to be accounted for in two ways:

(1) Collection of mail at the central post-office at 4.30 p.m. daily.

(2) By making direct smears upon all swabs marked for diagnosis (new cases). Those that we find positive by this method are reported to the physician the same afternoon on which the swabs are received. It will be seen that no effort has been spared in rendering as prompt as possible the report of the culture.

(*b*) *Tuberculosis Sputum.*

Each specimen of sputum is stained by two different staining methods and examined microscopically by two workers. All results are checked before reports are sent out. If tubercle bacilli are demonstrated with one method and not with the other, further films are made and stained until the results agree. This makes for accuracy in reports.

(*c*) *Typhoid Blood.*

Fewer specimens were received from cases of suspected typhoid fever and of course this corresponds with the diminished incidence of the disease throughout the Province.

All laboratories directly controlled by the Department make a uniform examination of dried blood specimens. This new method has been found to be accurate and very satisfactory.

(*d*) *Typhoid Faeces and Urine.*

A new outfit was gotten out during the past year for physicians and health officers to send in specimens of faeces and urine from suspected typhoid carriers. From the number of such outfits sent out we believe that the outfit has satisfied a long felt want. The growing recognition of the importance of the apparently healthy carrier should create a large demand for this outfit for the examination of stools and urine from such persons.

(*e*) *Preparation of Bacterial Vaccines.*

At the Main Laboratories the following bacterial vaccines are prepared:—

1. *Typhoid Monovalent Vaccine.*

This vaccine contains 1,000 million dead typhoid bacilli per cubic centimeter.

2. *Typhoid-Paratyphoid Vaccine.*

This vaccine contains:—

B. Typhosus	1,000	million	per	c.c.
B. Paratyphoid "A"	500	"	"	"
B. Paratyphoid "B"	500	"	"	"

3. *Whooping Cough Vaccine.*

This vaccine contains 2,000 million B. pertussis (Bordet's bacillus) per cubic centimeter.

The former dark amber coloured bottle and large rubber cap has been replaced by a clear glass vial with constricted neck and small rubber cap. We were able to make this change with the addition of

an individual package for each vial at no additional cost over the former bottle and large cap. Each bottle now bears a serial number and an expiratory date. The improvement in the appearance and the technique of preparation of the vaccines has created an increased demand for our products.

Although not included in the free routine of the laboratories, several autogenous vaccines from cases of acne, bronchitis, asthma, etc., were prepared for physicians from patients not able to pay for same.

II. Serology

Wassermann Reaction.

During May of the past year the Director of the Division visited the Mayo Clinic in order to obtain a first hand knowledge of Kolmer's new Standardized Wassermann Technique. Over 60,000 tests had been made by this method at Rochester and all difficulties had been controlled. This visit, which covered a period of only two weeks, made a great deal of experimental work unnecessary and prevented the possibilities of mistakes which are most likely to occur when a new method of such a complicated procedure as the Wassermann reaction is being applied.

The new test was first run in parallel with our previous method and when the assistants in serology become familiar with it, the Kolmer test was substituted for the old method.

On the return journey from Rochester the Director of the Division visited Dr. R. L. Kahn at the Laboratories of the Michigan State Department of Health, who kindly demonstrated his new precipitation test and pointed out their method of checking the Wassermann test with the precipitation reaction.

Since August, we have been working the two tests in parallel with all serums when sufficient blood is sent. When any important difference occurs in the results of the two tests, both tests are repeated before the report is sent out to the physician.

Results agreeing as they do in over ninety-five per cent. of serums make one feel doubly confident of the efficiency of the work in this branch of the service.

The number of specimens examined for syphilis showed an increase of eighteen per cent. over the previous year. Such an increase in the volume of work indicates a growing appreciation of the service afforded by this part of the Public Health Department of the Province.

III. Chemistry

It will be seen, from the accompanying table, that the total amount of work conducted in the Chemical Department, during 1924, shows a considerable increase over the previous year.

A. Number of Samples Analyzed

	1923	1924
Milk	185	317
Chemical waters	43	29
Blood sugar	None	167
Urine	None	135
Liquor:		
(1) For alcohol	2,430	4,195
(2) For medicinal ingredients	6	28
Coal	201	276
Miscellaneous	3	13

B. Public Health Products Manufactured

Phenarsenamine:		
(1) Number of ampoules	13,538	12,637
(2) Weight in grams	8,270	8,008.5
Mercury Salicylate Suspension:		
(1) Number of Ampoules	5,421	8,069
(2) Weight in grains	10,577	13,235
For Administrative Service:		
(1) Ounces sterile distilled water	22,538	23,198
(2) Ounces sodium hydroxide, 15 per cent	1,148	1,284
(3) Ampoules sodium hydroxide, 15 per cent	372	486

The foregoing table does not include the ammonia free distilled water, colloidal gold, blood sugar reagents, buffer saline and other products prepared by the Chemical Department for the Serological and Bacteriological Departments.

IV. Branch Laboratories

Branch laboratories directly controlled by the Provincial Department of Health—

Fort William	North Bay
Ottawa	Owen Sound
Peterborough	Sault Ste. Marie

Branch laboratories operating by special arrangement, but not directly controlled by the Provincial Department of Health—

Kingston (Queen's University) London (Western University)

The total number of specimens examined at the various branch laboratories of the Department shows a marked increase over last year.

Some of the Branch Laboratories serve as clinics for the diagnosis and treatment of indigent patients suffering from venereal disease. They all serve as centres for distribution of biological products. Many of them also serve as centres for free vaccination against smallpox and for Schick testing and toxin-antitoxin administration in the control of diphtheria. The cities in which the branch laboratories are located use the laboratories for the bacteriological control of water and milk supplies.

In conclusion, I wish to mention the spirit of co-operation and enthusiasm shown by all members of the staff during the past year. Particular mention should be made of the excellent work of the office staff in sparing no effort in promptly advising physicians of the results of laboratory examination.

Our hope for the next year is that we may be able to give even better service.

All of which is respectfully submitted.

ANNUAL REPORT FOR 1924 OF DISTRICT No. 1

T. J. McNally, M.D., D.P.H., District Officer

I have the honour to submit herewith for your consideration the twelfth annual report of this district which is composed of the six westerly counties of the Province (exclusive of the Border Cities and the City of London) and comprises sixty-eight townships, twenty-nine villages, seventeen towns and four cities, in all, one hundred and eighteen municipalities, each having a Local Board of Health constituted as required by the Public Health Act.

Each municipality has been officially visited, on which occasion I carefully reviewed with the Medical Officer of Health or the Local Board its sanitary condition, and when requested or conditions appeared to warrant it, I made a personal survey of the situation.

These personal examinations and contacts with the local authorities appear to me to have stimulated the interest and action of these bodies along all lines of public health activities, so that now it is rare indeed to meet with anything but whole-hearted support of all our endeavours to better sanitary conditions and protect the public health.

The local boards are beginning to appreciate the fact that quarantine of contacts and isolation of cases is not a punishment to be administered, but a necessary precaution to be carried out for the protection of the community with the least possible hardship to those involved.

The new regulations governing communicable diseases are a decided improvement over those discarded in that they bring administration more in line with present day scientific medicine.

The one serious defect that I have so far encountered and it has in several cases caused difficulty in the district is through septic sore throat not being quarantinable.

As the regulations stand at present, it is liable to lead to rather serious consequences where, as I have found, cases were not quarantined though diagnosed as septic sore throat, while scarlet fever was present in the locality in one case and diphtheria concurrent with it in another municipality. The difficulty is made greater by the regulations recognizing the disease as reportable, yet making no provision against its communicable nature.

In addition to the official visits above mentioned, I have called upon the local officials in many municipalities several other times during the year in response to requests for assistance, and to see that conditions that were not satisfactory when I made my official visit were corrected. This frequent visitation has been possible through the service of your motor car which has covered over eighteen hundred miles in the district during the year.

Having thus briefly sketched an outline of the district and year's work, I will deal with the different phases of our efforts in a short note devoted to each.

Public Health Nursing.

Public health nurses completed their demonstrations in Westminster Township, Delaware, and the Town of Tillsonburg, and made a limited examination of the school children of Lambton County. They also interviewed the several Women's Organizations of the county, assisted in fifteen public meetings of children by giving addresses and made follow-up visits of cases of defects in an endeavour to have those affected brought to Sarnia for examination or treatment as required during the health week.

All the work of our nurses and its reception by the public has been very satisfactory.

I am pleased to report that the Home and School Club of Ingersoll is making an earnest endeavour to raise sufficient funds to again employ a public health nurse for the town.

During the epidemic of virulent smallpox in Windsor in the early part of the year, the public health nurses rendered very efficient service which was much appreciated by the city and townships involved.

Canning and Milk Products Factories.

The canning factories at Forest and Ridgetown continue to cause serious nuisances and pollute the streams in their respective localities in spite of very vigorous protests of those affected and the local boards of health, we have also had considerable difficulty with creameries in the district, but have obtained relief in most cases when the owner's attention has been drawn officially to the condition.

Nuisances.

In addition to the cases above referred to, we have been requested to give personal attention to several other major nuisances in connection with pollution of streams, dumps, summer resorts and noxious trades, all of which have been satisfactorily abated.

Milk Supplies.

The care of milk by the local boards under the advice of your District Officer is being gradually and satisfactorily extended, though not yet completed for all the smaller urban centres.

Meat.

The preparation and handling of meat for local consumption are being given fair supervision by the local officials, but so far as I can see will never be complete or satisfactory until some governmental control is extended to cover supplies for consumption within the Province.

Rural Schools.

Your local boards of health under inspection by the medical officers are making slow progress in the improvement of sanitary conditions of these schools. One of the very discouraging features of this work is that even after the trustees at the instigation of the medical officer make such improvements as are fairly satisfactory, the next annual examination finds the condition almost as bad as before through the carelessness of the pupils.

Educational.

Considerable advance along this line has been made in the District during the year by means of addresses given by the local officers of health in the schools and at society meetings.

The District Nurses have done splendid work along this line by their demonstrations, Little Mother's Leagues, Home Nursing Classes and addresses to school children and women's organizations as well as in Lambton County in connection with the stimulation of public interest in the health week.

Communicable Diseases.

Smallpox.

This disease has been quite prevalent in mild form in the Counties of Essex, Kent and Lambton with a few cases scattered over the other counties.

In February, a virulent type of the disease appeared in unvaccinated persons in the Border Cities and from there spread to surrounding municipalities through the first case being of irregular form and not being recognized. During this epidemic there was not any person who had been successfully vaccinated during the preceding twelve years contracted the disease even in a mild form, though many had been exposed to it.

Five who had been vaccinated from twelve to sixty-five years previously took the disease in a very modified form and all recovered.

Five who had not previously been vaccinated were vaccinated after exposure, and while all of them came down with the disease it developed in very mild form and all recovered.

Twenty cases occurred in unvaccinated persons and only four of these recovered, and these after a very critical illness and all severely pock marked.

These cases, thirty in all, were contracted from contact with the virulent haemorrhagic type of the disease and occurred in municipalities outside of the Border Cities. These cases present in emphatic form an epitome of the advantages of vaccination for this disease.

The fact that the first case of this severe form of the disease occurred in an irregular and unrecognized form accounts for the fact that all contacts were not immediately vaccinated to protect them from the disease in fatal form.

Many further facts in connection with this epidemic might be quoted to substantiate the necessity for and the protection afforded by smallpox vaccination, but I will only relate a few as follows:

One striking feature was the fact that vaccinated nurses, although in intimate contact with these virulent cases, did not contract the disease in any form.

In a family of ten persons, all equally exposed, nine who were vaccinated did not develop any form of the disease, while the tenth member of the household who unfortunately was unvaccinated became its victim and died.

In the home of the first unrecognized case, the daughter, who was vaccinated six years previously on entering school, escaped any form of the disease, although she was in constant attendance upon her father; mother and aunt who were unvaccinated took the virulent type of the disease and died from it.

In a laundry where twenty-five persons were employed, twenty-four were vaccinated and did not have the disease, while the twenty-fifth who was unvaccinated fell a victim of the malady.

The practical lesson driven home to our Department of Health by the above lamentable epidemic, is that we should insist on vaccination of all pupils before entering any institution of learning receiving assistance from public funds.

Diphtheria.

While the mortality from this disease is gradually though slowing diminishing, it is continuing altogether too high and its incidence is but little lessened. It was necessary for me on two occasions to visit different localities during the year to insist on the local authorities being more active in controlling this disease. In both instances, after my visit the incidence of the disease lessened very rapidly and soon disappeared.

Venereal Diseases.

While the incidence of these diseases in this district is not perhaps as great as in the larger urban centres, I am satisfied it is more common than the records indicate, but it is pleasing to note that there is quite an appreciable growth of sentiment in the public favourable to dealing with these diseases in such a manner as to protect the innocent and prevent their extension rather than, as formerly, to ignore their existence.

Scarlet Fever.

This disease has been where it appeared in the district of rather a mild type, hence has given some difficulty owing to missed and concealed cases. It has also, I am satisfied, in some cases been diagnosed as septic sore throat.

Measles.

The local officers are now placarding all cases brought to their attention and making reasonable effort in most instances to locate missed and hidden cases.

Tuberculosis.

Our diagnostic clinics continue to function and have done excellent educational and preventative work. I have not endeavoured to extend the work as after conference with those conducting them it was considered wiser to get those already operating well established before proceeding into new territory.

Typhoid Fever.

There has not been any outbreak of this disease in the district during the year, although isolated cases have occurred at several points. There was a slight outbreak among the patients in the Ontario Hospital, London, which I was instructed by the Chief Officer of Health to investigate and report upon. I did so, and from the information I obtained came to the conclusion that it originated from some carrier from a former epidemic and so reported.

A very complete checking up of all patients who formerly had suffered from the disease by Drs. Fenwick and McKay of your Department, using the Widal test and bacteriological examinations of urine and faeces, confirmed my conclusions and located the carriers.

The medical staff of the hospital very promptly cut off the outbreak by immunizing everyone in or connected with the institution.

Public Water Supplies.

There has not been any disease in the district this year traceable to this source which speaks well for the supervision exercised over these works by your engineering division and the local authorities somewhat stimulated by frequent visits and enquiries.

Summer Resorts.

I have kept as careful supervision over these resorts as time permitted, but my comments and recommendations in last year's report is still applicable. I respectfully request that one of your engineering division's staff of engineers be assigned during this season, as soon as the spring opens, to this district to devote his full time to obtaining a safe water supply and proper sanitary toilets at all of these resorts in No. 1.

This expenditure appears to me entirely justified in view of the large populations involved and the importance of encouraging the large tourist trade.

ANNUAL REPORT FOR 1924 OF DISTRICT No. 2

J. J. Fraser, M.D., D.S.O., District Officer

Among the many activities engaging the attention of public health officials during the past year were: control of communicable diseases; milk and meat supplies; rural sanitation; county health officers; periodic health examination; pasteurization of milk.

Epidemics are being controlled to a much greater extent than formerly. It is generally agreed that the reporting of communicable diseases is essential to their control. Would it be advisable to give a fee for reporting? In Edinburgh, the town council has decided to pay a fee for the first case of measles or whooping cough occurring in any house. Detroit pays a fee of fifty cents for each case of tuberculosis reported.

I have had several enquiries from villages, asking how they can improve their milk supplies. Every slaughter house in the district is, I think, inspected at least once a year. A good deal of tact has to be exercised in small places, because if changes involving too much expenditure are insisted upon, the butcher or the milkman sell out, and the same amount of education must be gone over again with the new dealers.

Rural sanitation has not kept pace with urban in many respects. It is due not so much to a lack of knowledge as to a lack of funds. Typhoid fever is now more common in rural districts than in urban, chiefly because the water and milk supplies in cities are better controlled.

Where full time health officers are employed, real advance is made in public health. Nothing but a campaign of education will enable municipalities to see this. Kitchener and Waterloo attempted to get together and employ a full time man, but the scheme fell through.

Periodic health examinations would go a long way in the prevention of such diseases as cancer, heart disease, diseases of the circulatory system and kidneys, which now exact such a heavy toll of deaths. These examinations would detect illness at its onset, when preventive measures may be effective. Tendencies toward disease may be discovered and instructions given for overcoming them. Sir James McKenzie, in his "Future of Medicine," says this will form a large part of the practice of medicine. A questionnaire sent to a large number of physicians, asking their opinion as to the advisability of this, resulted in ninety-four per cent. of them answering in the affirmative.

General Epidemiology:

Smallpox.—There were only forty cases of smallpox reported in the district during the year. This, I feel, is due more to a kind Providence than any preventive work that has been done. Where a case of smallpox occurs, it is always insisted upon that those in the section, especially the children, be vaccinated. Sometimes it is possible to get some of the adult population done also, because in the actual presence of smallpox the anti-vaccinationists are usually very quiet.

Diphtheria.—Every death from diphtheria is investigated. The greatest cause of fatalities is—neglect of parents to call a doctor early enough. I do not know of any doctor who now waits for a positive laboratory return, if the clinical signs suggest diphtheria, anti-toxin is given at once. The Schick test has not been taken advantage of to the extent it should have been.

Scarlet Fever.—Has been of a mild type, occurring in sporadic cases. There was a small epidemic at Listowel early in the year. Immunization against scarlet fever by the Dick method is now an established fact and preventive measure.

Measles.—There were 2,413 cases of measles in the district with seven deaths. There were 24,095 cases in the Province.

The World's Health for September, 1924, contains an article on the prevention of measles. One example is given where of 1,700 children exposed and given a prophylactic dose, ninety-seven to ninety-eight per cent. did not develop measles with rash. This immunization is brought about by the injection of 2.5 c.c. of the serum of convalescents from measles.

Whooping Cough.—Is deserving of more attention than is usually given it. In 1923 the deaths from whooping cough in the Province were 181 as compared with 131 from scarlet fever. The Provincial Board supplies a serum for treatment, the reports from which are very conflicting. In some cases it is found useful in lessening the number and severity of the paroxysms. In other cases, no apparent effect is noticed. Early isolation of patients ill with the disease is at present the most effective measure for preventing its spread.

Typhoid Fever.—There were sixty-nine cases reported with three deaths. These sixty-nine cases were reported by thirty municipalities. Owen Sound, Orillia, and Kitchener reported eight each, but these were in hospital in the respective places, having been brought in from outside. Most of the cases were from the country. Auto tourists, campers, picnickers and the like are the most liable to infection, and should guard against it. They can safeguard themselves absolutely by treating their water and milk supplies, or by taking an inoculation before starting on their holidays. Either of these methods is safe and easy.

Hanover shows a striking example of what can be done by guarding the water supply. There were only four cases reported this year as compared with forty-eight the previous year, and fifty-six the year before that. These four cases were in an outlying part of the town not yet served by the new system.

Tuberculosis.—Chest clinics are held regularly at Orillia and Barrie by Dr. Kendall of Gravenhurst Sanatorium. Also at Galt, Kitchener, and Hespeler by Dr. Coutts of Freeport Sanatorium. These clinics have been found of great value. The local physicians receive help and stimulation in examining early cases and contacts. In this way a great deal of good work is being done, the results of which are hard to estimate.

Dr. Brink of the Provincial Board held clinics at Clinton and Stratford. Both these were highly successful and both places have asked to have them repeated. At Stratford the clinic lasted five days and two more days were asked for. This surely shows the need of such work.

The surveys of children made in the different provinces of the Dominion for tuberculosis are serving a most useful purpose. These surveys reveal an average roughly of one per cent. showing definite signs of tuberculosis, and five per cent. showing suspicious signs.

The pessimism that exists as to the value of sanatorium treatment is not justified. Even a short stay in a sanatorium is useful in teaching the patient how to take care of himself, but the duration of treatment might well be extended. If patients could be persuaded to go in earlier and stay longer, many useful lives would be lengthened. This might involve vocational training in the sanatorium, which might serve a useful purpose.

It is of interest to note that two cases are now pending judgment in the courts as to which of two municipalities is responsible for the upkeep of the patient during his stay in the sanatorium.

Anterior Poliomyelitis.—There was a small outbreak at Ayton in the County of Grey in September. There were twelve cases, all occurring within two weeks. Some interesting features of the outbreak were: three cases in one family and two in another. Half the cases were between the ages of two and fourteen, one was five months' old. The paralysis ranged from a slight paresis of one limb to complete paralysis of the four extremities. There did not appear to be any connection in the path of contagion, except three cases in each of two school sections.

The thanks of the Department were expressed to Dr. D. E. Robertson, orthopedic surgeon, and Dr. G. F. Boyer, neurologist, from the Sick Children's Hospital, who saw the cases with me in the interests of public health. They made measurements for splints, and gave valuable advice on the training of muscles in the cases affected.

Venereal Disease.

These are not reported as fully as they should be, where there is a clinical centre reporting seems to be better.

The criticism had been made of these clinics that they do not prevent venereal disease, but they certainly do prevent many dangerous sequelae that might follow if left untreated. It is the experience of those who conduct these clinics that patients will report for treatment who would not go to their own physician.

Public Health Nursing.

During the year the nursing service has been disturbed by health demonstrations in other districts.

Miss Campbell continued her work in Dufferin County, a Child Welfare clinic being held at Shelburne. This completed the work in the larger centres—Orangeville, Grand Valley, and Shelburne. Work was then begun in the townships, working through the schools out into the homes.

Miss Castle put on a demonstration at Milverton, where a Child Welfare clinic was held on January 23rd. Intensive work was done at Listowel, including school nursing, but on account of an epidemic of scarlet fever, no clinic was held.

Public Health demonstrations were given by both nurses in the Townships of Amaranth, East Luther and Mono, and in Mornington Township in the County of Perth.

Surveys were made in Huron, Bruce, and Grey Counties, including Wiarton, Lion's Head, and Tobermory in the Bruce Peninsula.

Many meetings were attended in connection with Women's Institute Conventions and practical contacts assured. Many fall fairs were attended where Baby Shows were held, which were almost like Child Welfare Clinics.

A forward step in nursing, from which much benefit is expected, was made during the year when the medical and dental inspection of schools was placed in charge of the local health authorities. This is provided for in Section 76 (JJ) of the Public Schools Act as amended in 1924.

An Outpost Hospital has been opened at Lion's Head in the Bruce Peninsula, financed by the Canadian Red Cross. This should be of inestimable value to all parts of the peninsula, especially to the places in the north like Tobermory, which is sixty miles from a railway and seventy-five miles from a hospital.

The nurse lives and works in the community, meeting as far as possible the medical and nursing needs of the district. The outpost is in charge of Miss Lawrence, who has had previous experience in the work at Wilberforce.

Water and Sewage.

Nineteen permits were taken out for extensions and improvements to water systems at a total cost of $293,735. Twenty-seven for new and extended sewerage systems at a cost of $350,988.

Most municipal water supplies in Western Ontario are derived from deep artesian wells and springs, and do not require filtration or chlorination. When the supplies are taken from lakes or streams, as in some of the lake towns, there is always a potential danger. Eight such places are chlorinating their supply.

An anomaly exists at Owen Sound, where the supply is derived from the Sydenham River and from springs. The water from the river passed through sand filtration is pure, while that from one of the springs shows intermittent contamination. A chlorinating plant for the springs has been ordered for delivery.

Goderich installed a new intake and an improved chlorinating plant at a cost of $60,000 and has now an adequate supply of pure water.

Kitchener is having difficulty in having its sewerage system keep pace with its growing population.

The district officer is kept well informed of the state of the water supplies by the reports of analyses sent direct from the Provincial laboratories.

Summer Resorts.

The sanitary conditions as found at the resorts and hotels were very good. An attempt has been made to get the local health officers and sanitary inspectors to keep a closer check on the cottages and private places.

The water is well protected from contamination. It was recommended in some places that the intake be extended or the location changed where it was thought to be too near the bathing beach. It was reported that an analysis of the water in the Muskoka Lakes had been made and that the water was polluted. But no trace of when or where this analysis was made could be found.

The disposal of sewage is well attended to. The old pit closet is practically a thing of the past. Two or three places have the dry earth closet, but the hotels have installed flush closets and septic tanks. At two places, the Windermere and Epworth Inn, the sewage had broken out through the weeping tile. At the Windermere, the manager had a quantity of tile on the ground waiting for help to get it laid. In the meantime he was shown how to take care of it. At Epworth men were working on the break. There is an expensive plant here, but it has not given very good satisfaction owing to faulty construction.

During July many of the hotels were not half filled. August was a little better, but it was not at all a good season. Three reasons were given for this—cold weather at the beginning of the season; the Wembley Exhibition; the unsettled state of business.

A new place, the Newtonia, at Windermere had built a cesspool in the sand, under the impression that it was a septic tank. The owner was told to have a proper septic tank, and he promised to have one installed.

Investigated complaints *re* the Government dredge and S.S. Sagamo, reports of which were sent to the Provincial Board.

Milk and Meat.

While some municipalities have a live issue in pasteurization of milk, public opinion is not strong enough to enable them to pass the necessary by-law

requiring it. Opinion seems to be divided between tuberculin tested herds and pasteurization. Now that the Municipal Tuberculosis Order was discontinued last year, more weight may be thrown on the side of pasteurizing. Replacing the Municipal Tuberculosis Order are two sets of Regulations—1, Regulations for the Establishment and Maintenance of Tuberculosis Free Accredited Herds; and 2, Regulations applying to Restricted Areas.

Veterinary science is now recognized as a part of public health services, and many places employ veterinary inspectors. They held very intelligent views on milk and meat inspection.

The slaughter houses have received a good deal of attention. Some towns get all their meat from the abattoirs in Toronto, where they know it has all been Government inspected. Adequate meat inspection in rural slaughter houses is out of the question. It can only be done in public abattoirs. The demand for these may be a long time coming. In Scotland where ninety-two per cent. of the meat killed is killed in public abattoirs, the demand has been going on since 1860.

All carcases intended for human food should be inspected, and the places where they are prepared should be licensed. It is obviously wrong, and defeating the object to subject the members of the meat industry to rigid inspection, and at the same time to allow dealers, farmers, and others to slaughter animals in premises in many cases undesirable to say the least, and then sell their carcases without any guarantee that they are fit for food.

The Village of Ayr, which was settled one hundred years ago, wished to close two of its old cemeteries, and applied to the Provincial Board for authority. Through the energy and enterprise of one of its citizens, Mr. John Goldie, the history of every grave was traced and recorded. This plan I would recommend to other communities that have abandoned or deserted cemeteries.

There were no less than six deaths among the health officers of the district during the year. Each of these was a splendid type of old family physician, and had served their community as health officers for a long time.

Dr. Robertson of Stratford was for nearly fifty years M.O.H. of the city, and up to the time of his death took an active interest in his work. Dr. Hart of Huntsville had a large private hospital which served the northern parts of Muskoka in the early times for years. Dr. McGillawee of Kitchener; Dr. Hutton of Durham; Dr. Greenlaw of Palmerston; and Dr. McDonald of Owen Sound, all enjoyed the esteem and confidence of their communities, and gave freely of their time and ability to matters pertaining to the health of their public.

ANNUAL REPORT FOR 1924 OF DISTRICT No. 3

D. A. McClenahan, M.D., D.P.H., District Officer

I have the honour to submit my annual report of the activities of the District Officer of Health of District No. 3, Province of Ontario.

As in previous years I have found in 1924 that a large part of my time has been taken up with epidemiological work. Whether we agree that this is the most important phase of public health work or not, the fact remains that it takes up a large part of the district officer's time.

Typhoid Fever.

We are still having small epidemics of typhoid and also sporadic cases. The causes of these epidemics in my district during 1924 have been in nearly

every case the infection of the milk supply by a typhoid carrier. In January, 1924, I was called to the cyanamide plant at Niagara Falls in connection with two cases of typhoid which had occurred among the employees. The city water is used in the plant and was polluted at the time the first case came down with the disease. The second case was the male nurse at the plant. He had looked after the first case for a time and had, I think, contracted the disease from him. The amount of chlorine was increased in the city water and no subsequent cases were observed. The employees all received typhoid vaccine by way of precaution. An interesting case came to my notice in connection with a patient sent from Ancaster Township to the Hamilton City Hospital with a tentative diagnose typhoid. The Widal test was negative at the end of the first week. The patient's temperature dropped to normal before the end of the second week. Later on marked peeling of the hands was observed. The Widal was persistently negative. It was without doubt a case of scarlet fever. I visited the patient's home in Ancaster, but could not find the source of the scarlet fever. I also visited the school in Ancaster Township where the patient had attended, but examination of the pupils revealed no other cases.

The epidemic at the Norfolk House of Refuge offered a very interesting study. About three years ago, two patients at the Home developed typhoid. At that time it was thought to be due to a polluted water supply. A new source of supply was obtained and repeated examination showed no pollution. Then in 1924, five more cases developed at different times. On investigation, I found that the water was not polluted, and the milk was not handled by any one who had ever had typhoid. On doing a Widal on the two cases which had occurred three years before, we found that one of them gave a positive Widal. Examination of the stools has been negative thus far, but I am satisfied that the patient is a carrier. She had been accustomed to working in the kitchen and had probably infected the food. This patient, a woman, is somewhat feeble-minded. No subsequent cases have broken out since the carrier was removed from the kitchen. During the investigation, I received every assistance from Dr. Grassett, M.O.H. for Simcoe, and also from Miss Spencer, the superintendent of the Home.

Another outbreak of thirteen cases occurred at Long Branch. On investigation it was found that the houses where the cases occurred, all received their milk from one milkman. The proprietor did the milking himself and gave a history of having had typhoid some years before. On examination of the blood the Widal was found to be positive. Cutting off the milk supply ended the epidemic. The water supply at Long Branch is the same as that at New Toronto and Mimico and showed no pollution.

These different epidemics emphasize the danger of an unpasteurized milk supply. Milk in my opinion should be collected in as cleanly a manner as possible and then pasteurized. If milk dealers will not put in pasteurizing plants, then I believe it would be good business for a municipality to look after its own supply and put in its own pasteurizing plant. It is surely just as important to have a safe milk supply as it is to have a safe water supply.

Smallpox.

We have had a few cases of smallpox in my district during 1924. We have had no serious epidemics. We have been very fortunate in most instances in having the first case diagnosed, and where this is done and proper precaution taken regarding contacts, no serious epidemics result. There were three cases broke out in the Township of Ancaster, Wentworth County. The first case here had not been seen by a physician after the rash came out, and consequently

the disease spread to two near-by neighbours. When recognized and proper quarantine established and contacts isolated, the disease subsided.

Diphtheria.

In January and February, 1924, there was a rather extensive outbreak of this disease in Brampton. Cases had been cropping up since November, 1923. I am of the opinion that at the commencement all cases were not reported and in the cases reported, other members in the families were not immunized against the disease, nor were all members in the family tested as to infectivity when the patient was set free. There were one or two sudden deaths that were suspicious in young children. They may have been diphtheria and this would of course help to spread the infection. I had already made one or two visits to Brampton in January and taken the matter up with Dr. Sharpe, M.O.H., Brampton. I recommended at that time swabbing the throats of the children in the schools, but nothing was done. Then some of the residents in the town became alarmed and a letter was sent to the Department complaining that there was lax enforcement of the quarantine, and that favouritism was being shown to certain individuals, that all cases were not being reported, and that the doctors were trying to keep the epidemic alive. At my subsequent visit to Brampton, I could find no evidence to support the latter charge. I insisted on an energetic effort being made to subdue the epidemic. As some of the cases had been attending school, I thought we should have nurses take swabs from all the pupils. Miss Power kindly loaned a nurse, Miss Murphy, who assisted Miss Galbraith the school nurse. Excellent work was done by these two nurses. I also visited the Town Council in company with Dr. Sharpe and asked for their co-operation in an effort to stamp out the epidemic. They assured us they would co-operate in any way. Dr. Sharpe also undertook to see that there was a closer quarantine observed. I also visited all the doctors and got the promise of their co-operation. A number of carriers were found in the school and some of them were virulents. These were isolated and treated and the epidemic subsided.

I think it is advisable to have all children in any community tested for susceptibility to diphtheria by means of the Schick test, and all positive cases treated by toxin-antitoxin serum. I am satisfied this procedure would eliminate a large number of the cases of diphtheria we now have.

Scarlet Fever.

We have had fewer epidemics of scarlet fever in District No. 3 than during 1923, the only one of importance was in Bridgeburg. At the outset the quarantine was not properly observed. Dr. Collins, M.O.H., telephoned me when about twenty cases had occurred. I visited the town and made an investigation. The Board of Health co-operated and a special nurse was appointed to assist the school nurse in going over the children every morning and isolating those with a temperature of 100 or over, or those with a suspicious looking throat. A strict quarantine was established and it was not long before the epidemic was under control.

Tuberculosis.

The number of tuberculosis cases still continues large. With the assistance of Dr. Brink, I have tried to have Tuberculosis Clinics established in Welland and Simcoe. We visited the Norfolk Medical Society and explained the object of the Tuberculosis Clinic and the medical men were favourable. The Board of Health, however, declined to furnish the room and necessary equipment. A

hospital is being built in Simcoe, and when completed it is thought that accommodation for the clinic can readily be found there. In Welland the M.O.H. was favourable, but difficulty was found in getting a suitable room. We are hopeful of the establishment of these two clinics during 1925.

Sanitary Inspection of School Premises.

This has been productive of a great improvement in conditions in school houses especially in the rural sections. I have been trying to assist the local M.O.H. in the cases reported to me by Dr. Middleton. Where we get a meeting of the school board and explain exactly what we want them to do and when we want it done, there is rarely any trouble in having the improvements carried out.

Nuisances.

A large number of alleged nuisances have been investigated during 1925. One complaint was made by residents of Avondale Avenue in Hamilton, about the smoke dust and noise arising from the operation of the Doolittle, Russell Supply Co. just across the street. I spent a good deal of time in investigating the complaint, had interviews with the residents, with the manager of the company and with Mr. Doolittle himself. I was ably assisted by Dr. Roberts, M.O.H. of Hamilton. We got conferences between the representatives of the company and the complainants. In the end the conclusion reached was that the only satisfactory solution was for the company to enclose in a building the entire plant. This the company deemed was beyond their means. The Board of Health of Hamilton met and passed a resolution recommending that an order be made to compel the company to abate the nuisance. This was done and the matter rests there at present. Both sides displayed a fine spirit of conciliation throughout the negotiations.

Recommendations.

1. I would like to recommend the establishment of a purely public health laboratory at Hamilton. This could be done in collaboration with the City of Hamilton and would serve both the city and that part of District No. 3 not contiguous to Toronto. There is room here in the Health Centre Building for such a laboratory. It would be a decided benefit to the public and the medical profession. Incidentally, it would provide the District Officer with a proper office which he should have.

2. The water supply of the City of Hamilton is not satisfactory, being polluted in about seventy days out of the year sometimes to the extent of colon in 1 c.c. I would recommend that the Department make an order requiring the City of Hamilton to install filtration and chlorination plants at once.

3. I would recommend that the Public Health Act be so changed that the responsibility for the abatement of nuisance be divided between the Police Department and the Engineering Department.

ANNUAL REPORT FOR 1924 OF DISTRICT No. 4

N. H. Sutton, M.D., District Officer

I beg to submit herewith a report on my work in District No. 4 for the year 1924.

In doing this, I pass over without special mention the usual routine work of the visits to M.O.H.'s, correspondence, consultations, etc., and mention only those things which seem to me to be of special interest, or which present special problems to be solved.

In this class is the problem of public health in northern areas of the district. The part to be considered in this is the County of Haliburton; the northeastern three townships of Peterborough County and, roughly, the northern half of Hastings County. The basic reason for the presence of this problem is that agricultural settlement of this area is economically unsound. It will not adequately support an agricultural population. Such settlement having, however, been allowed to establish, it inevitably follows that it has suffered the steady loss of the best of its citizens to more promising areas, and those who have remained have felt the deadening influence and hopelessness of toil inadequately remunerated.

The sparseness of the settlement and distances from neighbours meant lack of real community life. We have therefore now to deal with problems of unattended or insufficiently attended sickness, lack of sufficient maternity care, lack of education, and the need for mental hygiene, social hygiene, and social service generally.

In January, I visited the Hasting's Medical Society and took up with them and their committee appointed to deal with this subject, the problem in so far as it obtained in Hastings County. The first step, in their estimation would be the establishment of a Government-assisted small hospital in Bancroft Village, which is the centre of a forty mile area of more or less isolated small villages and neighbourhoods, such hospital to be staffed with one or more nurses, one of whom would have the hospital under her charge and do a certain amount of public health nursing. The other to be specially in charge of public health nursing in the area and assist in the hospital when special need arose. Before arriving at this conclusion, various other plans were discussed; amongst others, the subsidizing by the Provincial Government of recent graduates to take up residence for a time in some of the isolated villages which were strategically so situated as to serve a considerable area. It was noted that if a young man were subsidized thus, why should a subsidy not also reach the older men who were already in the area and had borne the burden already for many years.

Another plan suggested was, allowing those in their final year to engage in practice in the area under the supervision of neighbouring doctors, or in the alternative, the supervision of District Officer. It was felt by most of the committee, however, that the right type of student might not always be obtained, and the last state of the people be worse than the first. Other suggestions offered did not have sufficient attraction to be seriously considered.

Later in the month I attended the meetings of the County Councils of Victoria and Peterborough and took up with them this problem, to see whether in their opinion—they being the elected representatives of these people—the problem existed at all acutely in their area.

In Victoria County it was not existent to any great extent, and in Peterborough only presented itself in the northeasterly three townships. In Hali-

burton, the problem exists most specially in the southeastern part of the county in a range of townships above the northeastern part of Peterborough County and bordering the northern part of Hastings County. It was in this area that the Red Cross has had an outpost in the Village of Wilberforce. Later the County Councils of Hastings and Peterborough passed resolutions requesting the Provincial Government to examine the matter, with a view to establishing small hospitals at Bancroft for North Hastings, and Apsley for northeastern Peterborough.

During the summer I have had one of the Provincial nurses allotted to my district, working in Bancroft and the surrounding area. She very early found that social service would have to be added to her nursing work, and has been carrying on on that basis with my hearty approval. When she has finished going over the area, she will have a very valuable report, throwing further light on this problem which has for a long time cried out for solution.

During the year, various demonstrations have also gone forward in my district by the nurses of the Department, and gradually the ideal of public health nursing is being spread among the people and commending itself to them wherever demonstrations have been given. It is a period of rigid economy, and new expenditures, however much they might commend themselves, are simply not being indulged in by municipal councils, where by any possible excuses they may be put off or vetoed; hence no new appointments of resident public health nurses have been made in the district.

The end of January saw the nursing demonstration in Lindsay completed, and in spite of a very large representation of all the Women's organizations in the town, and of the Board of Education, the council refused to ratify any new expenditure and a nurse was not appointed. The Board of Health, under these circumstances, fought shy of exercising their power to appoint one, and it may take considerable time or the loss of some children's lives in an epidemic to bring things again to a head.

The appointment of a Public Health Nurse in the village of Longford, a project fostered by an industrial concern, immediately followed a nursing demonstration at that place. The presence of a sharp outbreak of scarlet fever in Bowmanville, is, I am assured, to be followed by the appointment of a Public Health Nurse there at the beginning of 1925. The demonstration during the late summer and early spring in Campbellford met with very warm approval, but so far here also will the endeavour to reduce tax rate prevent the appointment of a Public Health Nurse, though it is intended if possible to extend this demonstration throughout the Township of Seymour surrounding the town of Campbellford, and it is expected that the two municipalities may combine for the appointment of a resident nurse.

During the autumn, another demonstration is in progress in East Peterborough, centred on the Village of Norwood.

In February I was able to go about with Dr. Brink to visit the medical men in the various towns and assist him in establishing visiting points for his travelling chest clinic at strategical points in the district.

In the month of March I undertook, in conjunction with the Canadian Social Hygiene Council and its local organization, to put on their Social Hygiene Exhibit. In this work we were indebted to the Provincial Board for the loan of the wax figures and the services of Miss Moore and Mr. Jones, together with the films and literature. The exhibit was held for a period of two weeks, and in that period was seen by over 4,700 of the adult population of Peterborough and surrounding townships, as well as some visitors from points further distant

in the district. The membership in the local Social Hygiene Council jumped from less than 50 to some 350. That the interest is still keen amongst many people is evidenced by the fact that inquiries concerning this work are still coming in from quite a wide area.

In the autumn the local council had a tent at Peterborough Exhibition, with a necessarily smaller exhibit, but again a gratifying attendance and a keen interest was evidenced. Certain organizations in Belleville and other places are endeavouring to pave the way for a similar exhibit in their towns. I regard this as a work which promises great results.

During the summer I carried on intensive work on the sanitary condition of the increasingly populous summer resorts of the Kawartha Lakes region. I found many things which were in great need of rectification and was able to accomplish a very gratifying amount of improvement. That this is needed is shown by the results of the examination of the samples of water taken at various points along some forty miles of lake and river. Not one of these failed to show pollution, which in some places was fairly massive. This throws an interesting light on the presence of a certain amount of annual summer diarrhoea in various parts of the resort area, and will assist considerably in finally tightening up the sanitation to the degree which should obtain.

Most of the autumn has been taken up with routine work, of which I only mention investigations into the typhoid epidemic at Belleville, the salient points of which were the necessity in urban areas of getting such facilities installed as will insure a municipal water supply, which will be attractive as well as pure, and will allow the closing of the private wells which are always a source of danger in urban centres.

All of which is respectfully submitted.

ANNUAL REPORT DISTRICT No. 5

P. J. Maloney, M.D., District Officer

To the Department of Health:

I have the honour herewith to submit my annual report for the year 1924, District No. 5.

District No. 5 is made up of the Counties of Dundas, Stormont and Glengarry, Leeds and Grenville, Frontenac, Lennox and Addington, Lanark, Renfrew, Carleton and Russell and the City of Kingston.

This office continues to be utilized as a source of information and a public health centre to a much greater extent than in former years, both by letter and telephone.

The district has been thoroughly inspected in a routine manner during the year, and the work has been greatly expedited by the supplying by the Department of an automobile for our work.

All the public institutions, thirty-four in number, have been inspected regarding their sanitary condition and a report sent to the Provincial Board, and where indicated to the governing bodies.

Calls for the investigation of special conditions arising at different localities in the district have been promptly responded to when at all possible and if found justified vigorous action taken. I desire to record the hearty co-operation and valuable assistance received from the inspectors of the Ontario Department of Labour, the Provincial Public Health Nurses, the Mothers' Allowance Board,

the Dominion Veterinary General's Department, the Dominion Anti-Tuberculosis Association, and the departments under the control of the Provincial Board of Health.

Typhoid Fever.—While no outbreak of typhoid fever occurred on such a scale as to be called an epidemic, this disease was fairly prevalent during every month in the year in some locality. While in most cases the source of the disease was apparent, quite a few cases occurring in rural localities were impossible to trace. These cases were mostly located in the townships of Osnabruck, Roxboro, and Cornwall in the County of Stormont. They were chiefly among farmers many miles distant from each other, generally one case in a household, and no history of the patient having been away from home to an infected district, or the presence of carriers. The eating of foods which had been handled by an infected person in transit, in the absence of any other probable source, might be credited as the origin of these outbreaks.

About forty cases occurred in Pembroke during the year. Apart from an outbreak occurring in a foreign quarter which was evidently caused by an infected well, all the other cases were evidently traceable to the municipal water supply. One defect in the water works equipment is that the intake which is over a mile in length is insufficient to supply the system in cases of emergency when a large volume of water is required, as in the case of a severe fire. Water has then to be pumped from near the shore line, where there is a good deal of sewage contamination, and results in all the town mains being contaminated for some days at a time.

Another defect is in the chlorination plant which is either antiquated or worn out and is subject to frequent break downs, allowing the mains to be filled at times with unchlorinated water. Outbreaks have occurred during the year which showed a clear connection between these occurrences and the beginnings of the disease.

The attention of the town council has been repeatedly directed to existing conditions, and while much local interest both in the press and among the people has been aroused, in my opinion no adequate steps have been taken to properly guard the purity of the town water supply.

Westboro; several cases have occurred in this locality notwithstanding the greatest vigilance exercised by the local health authorities. For many years in my annual report, I have referred to the danger existing in this suburb of Ottawa City.

It seems incomprehensible that the City of Ottawa of its own volition (for this locality is quite willing to be annexed to the city) should allow a suburban district, containing from ten to fifteen thousand people, to be established without municipal sewage or water system on the high lands that drain into the river above the locality from which the city takes its own water supply. Even from a business point of view as ordinarily understood, it would be thought there should be no hesitancy. The people are of an unusually high class, exceptionally well housed, with good schools, one recently erected cost a quarter of a million dollars, and the total assessment must exceed most cities of a corresponding population.

Yarker; an outbreak occurred in this village in August from an infected well, in all there were nine cases. Several other cases in the surrounding country originated probably from the same source. Napanee, which gets its water supply near the mouth of the same river on which Yarker is situated, had a few cases, although precautions were taken at as early a moment as possible to inaugurate preventative measures in the town.

Iroquois; there were eight cases in this town due to the use of canal water. The river intake was out of order and water was pumped direct from the canal during the period of navigation. The local health authorities ordered all water for domestic consumption boiled, but the outbreak occurred nevertheless owing, evidently, to the negligence of some of the water users. A fatal case at Cardinal, just above Iroquois, had history of infection from the Iroquois water supply.

Mountain; eight cases at Holwell Corners near Mountain were traced to the use of water from a common village well, near which was a privy vault used by five other persons who in former years had typhoid; evidently some of these parties were carriers.

Every suspected case of typhoid, about four hundred in all, for whom the Widal test had been made, was investigated whether the report was positive or not. While during the year a much larger number of typhoid cases came under notice, owing to the new regulations, I am of the opinion that there were fewer than in former years.

Smallpox.—During the year more localities were visited by smallpox than usual, but few cases occurred in the aggregate. This can be accounted for by the greater number of vaccinations during recent years, and the more prompt action by the local health authorities. The only exception to the latter was in and around Athens, where great laxity was shown for some time in making a diagnosis and in coping with the disease.

Perth and vicinity had twelve cases, and at least two thousand were promptly vaccinated.

Carleton Place, one case, and practically all the children were vaccinated.

Athens, fifteen cases with six hundred vaccinated.

Almonte and Williamstown, one case each and vaccination was thoroughly carried out.

Rockland, ten cases all in one family; practically one hundred per cent. of the children vaccinated.

Eastview, one fatal case with infection traced to Windsor. We had also three deaths from haemorrhagic cases traced to the Sudbury outbreak.

Renfrew; one case in the hospital which was brought from Whitney, Ontario. I investigated this outbreak in Whitney in the unorganized territory and found several cases. Excellent work was done by officers and nurses of the Department in cleaning up the situation there, but subsequently it spread to Barry's Bay in No. 5 District, where about ten cases developed. Strict quarantine and thorough vaccination prevented its further spread eastward, and at the end of the year there were no cases in No. 5 District.

I estimate that there were at least five thousand cases of chicken-pox in the district during the year and at times running concurrently with the smallpox, required frequent visits to aid the local health officer in making diagnosis.

Goitre.—Acting on instructions from the Provincial Board, a survey as to the presence of goitre in District No. 5 was carried out during the month of February. Every municipality sent in a considered estimate as to the prevalence of goitre, especially among the children.

The percentage varied greatly, the maximum estimate being 35 per cent.

In one large town, assisted by two nurses, I examined all the school children and found enlarged thyroid in 18 per cent. of the girls and 12 per cent. of the boys.

As it is now a pretty well established fact that this condition is preventable by a very simple treatment, I have advocated in addresses, to Women's Institute and other meetings, that communities undertake to provide this remedy for all

their children. We have already made a start in one locality where the percentage of enlarged thyroids is very high.

Chest Clinics.—In company with Dr. Brink of the Provincial Board, demonstration clinics in diagnosis of diseases of the chest were given in Hawkesbury, Rockland, Renfrew, and Pembroke.

Many times the number of patients that could possibly be examined applied at the clinics. Strong representations were made by the local physicians and social welfare agencies to induce the Department to establish such clinics at convenient points on a permanent basis.

Owing to the generosity of the Canadian Tuberculosis Association, the local hospitals and Rotary clubs, two chest clinics have since been permanently established, one at Pembroke and one at Brockville. The one at Pembroke is held once a month and that at Brockville twice a month. In the latter town one clinic is for patients in the town and the other for patients in the rural parts of the counties of Leeds and Grenville. Both clinics are under charge of Dr. Bruce Hopkins of the Mowat Sanitorium, Kingston, who attends them personally. No charge is made to the patients and each clinic shows an added interest by the physicians and their patients.

Among the physicians in the smaller towns and villages there is an active demand for a travelling clinic with a portable *x*-ray outfit. If the Department or some private agency would supply the outfit, the staff of the Mowat Sanitorium agree to take care of and operate it.

Public Health Nurses.—During the year the nurses from the Department of Maternal and Child Welfare, under the direction of Miss Power, gave noteworthy demonstration in this district. Every assistance possible was given by me as District Officer.

Miss Squires has devoted her time to a complete County Demonstration which is not yet quite finished. The county selected for this work was Glengarry. As this was the first County Demonstration attempted, I spent considerable time to aid in making it a success. As a whole this was the finest demonstration ever given in the Province.

During the summer a Public Health week was held with headquarters at Alexandria. As the details of the Health Week will be given in the report of the Division of Maternal and Child Welfare, I will omit it here.

I wish to state, however, that no effort of the Department has ever met with such unqualified approval from the people and physicians, and the minister and those taking part.

Summer Resorts.—Our many beautiful summer resorts have been more generally patronized during the summer than in past years. The building of the Good Roads System no doubt had much to do with the influx of tourists.

Besides personal inspection the local Health and Sanitary Officers have been encouraged to take a more active interest in these resorts particularly to guard against the contamination of the waters. Summer residents now appreciate and are very thankful for the stringent regulations enforced.

The following are the chief summer resorts in this district, all of which have been carefully inspected and supervised: Thousand Islands, Stanley Island, Hamilton's Island, Colquhoun's Island on the St. Lawrence. The Rideau chain of lakes, including Jones' Falls and Chaffies, Charlton Lake, Christie's Lake and resorts along the Ottawa.

To give the work in detail attended to from this office would require a very lengthy report. In making routine inspections and others at the request

of Health Officers, Boards of Health, Municipal Councils and residents, I have visited in some cases many times, but at least once, the following localities: Ottawa, Kingston, Cornwall, Brockville, Smith's Falls, Perth, Carleton Place, Arnprior, Pembroke, Napanee, Gananoque, Hawkesbury, Rockland, Alexandria, Renfrew, Kemptville, Prescott, Morrisburg, Cardinal, Iroquois, Athens, Lancaster, Vankleek Hill, Fournier, Plantagenet, Alfred, L'Orignal, Bourget, Pendleton, St. Isadore, Caledonia, Maxville, North Lancaster, Williamstown, Apple Hill, Dunvegan, Summerstown, Roxboro, Newington, Finch, Crysler, Winchester, Morewood, Chesterville, Williamsburg, Mountain, South Mountain, Edwardsburg, Mallorytown, Rockport, Delta, Elgin, Crosby, Portland, Sydenham, Harrowsmith, Yarker, Odessa, Westbrook, Bath, Bathurst, Calabogie, Douglas, Osceola, Barry's Bay, Whitney, Almonte, Richmond, Embrun, Westboro, March, Russell, Metcalfe, Eastview, Sharbot Lake, Pittsburg, Portland Township, Harrowsmith, Bastard and Burgess, South Gower and Clarence Creek.

ANNUAL REPORT TO THE DEPARTMENT OF HEALTH, DISTRICT NO. 6

W. Edgerton George, M.D., District Officer

I have the honour to submit herewith my annual report for 1924, for Health District No. 6.

Organization

Five hundred and thirty-seven surveyed townships, large areas unsurveyed.

There are eighty-four organized municipalities with the following Public Health supervision:—

84 organized municipalities.
38 towns and villages.
46 townships.
48 physicians acting as part time medical officers.
83 sanitary inspectors—7 only full time.
6 public health nurses—in larger towns.

Departmental Supervision of District:—

District officer.
2 sanitary inspectors (1 part time).
2 public health nurses.
1 laboratory. Staff—Director, assistant, stenographer.
1 venereal disease clinic—North Bay.

Early in January I wrote to the medical officers of health in all of the larger towns within the district pointing out the value of the Schick test in separating the immune from the non-immune to diphtheria, and urging the use of toxin-antitoxin for those who react. It was pointed out that it was advisable to immunize as early in childhood as possible.

With the exception of measles, there were no extensive epidemics in the district during the year.

One small outbreak of smallpox at Cochrane is deserving of special mention, as the type of case was so different to the usual mild run of cases which has been common in Northern Ontario for the past twelve years. There were eighteen cases in all, with five deaths; all were severe. There were no mild cases. There

were more deaths from smallpox in this small outbreak in February than in the previous twelve years. No patient was attacked that had ever been vaccinated.

Tuberculosis.

During the year a number of indigent tubercular patients were sent from unorganized territory to the Sanitoria at Weston and Gravenhurst at the expense of the Board.

Maternal and Child Welfare

In the week of February 19th, a clinic was held in Cobalt. The clinics were held in different parts of the town and were packed with mothers and children.

Another successful clinic was held in Timmins.

The clinic has proven a splendid method for the closing of the nurse's demonstration of public health nursing in a community, as it gives the public a view of the value and importance of the work which she has been trying to carry on among them during the weeks of her effort.

From the rural work done in this district I am convinced that here is the most valuable field of usefulness for the public health nurse. Away from the centres where medical aid is promptly available, the mother doubly requires instruction.

Milk Supplies

Sudbury's milk supply was suspected of being the cause of tubucular glands in a considerable number of patients. There was information of eighty to ninety cases. I went to Sudbury early in June to consult with the authorities there regarding this rumour. On the 15th of the following month visits were made to all the dairy barns where milk is produced for Sudbury. Mr. Frank Rathrey, the municipal sanitary inspector, accompanied me. The result of my inspection indicates that Sudbury's milk supply was well handled at the producer's end and will compare favourably with the methods of production used in Toronto. But this is not sufficient to guard against tuberculosis. To protect against this danger, either of two methods is employed, or a combination of the two. First—Pasteurization. Second—Tuberculin tested herds. There are certain legal difficulties in the way of tuberculin testing, so I advised the municipality to insist on the pasteurization of all milk sold in the municipality as the method most efficient and least costly. It forces the producers to market their milk through depots, but the dairymen usually know how to handle such commercial matters effectively.

Other milk supplies in the district were free from complaints until late in November when six cases of typhoid occurred in Cobalt, where they were suspected of originating from one dairy. The cases were spread out in various parts of the town. All got their milk supply from one dairy. When the medical officer investigated he found that the dairyman was buying milk from a number of producers who were not licensed. All those in any way occupied in the handling of milk sold by this dairy were given the Widal test, but none reacted. Some of the small producers were located along Mill Creek, which carries Cobalt sewerage. It was thought that possibly one of them had used this water for washing cans or bottles. The medical officer closed the dairy until the investigations were complete and only allowed the reopening after guarantees were given that milk would only be purchased from licensed producers. All the cases occurred within two or three days. There were no deaths.

Laboratory

The number of specimens examined at the Branch Laboratory of this district was over 6,000, or approximately 50 per cent. increase over last year.

Water Supplies

Haileybury.—Water samples from Haileybury were not satisfactory, as the laboratory information caused some anxiety. This was the more difficult to understand as the water is both chlorinated and filtered. I went to Haileybury to investigate. The pumps are in a separate building from the filters. The chlorine is injected into the intake near the pumps. Tests for chlorine made in the pumphouse were satisfactory, showing plenty of residual chlorine after fifteen minutes. The filters are not more than seventy-five to one hundred feet from the pumps. Tests taken after passing through the filters showed no chlorine. The water passes through the filter in approximately one to two minutes after being pumped. The organic matter collected in the filters has such an affinity for chlorine that there was no free chlorine left after passing through them. The association of the chlorine and water for from one to two minutes is insufficient to sterilize. They were accordingly advised to push the chlorine until there was a minimum residual in fifteen minutes after passing the filters. Samples taken subsequently were much more satisfactory but the quantity of chlorine used was seriously objected to by the municipal council. Our Engineering Division then adjusted the dosage by cutting the quantity of chlorine used, leaving a reasonable margin of safety.

North Bay.—North Bay got their chlorine plant into operation in April. At the beginning its continuous operation was interrupted by the installation of a new pump at the pumphouse. The interruption was immediately noted by the increase in digestive disturbances, especially among infants and children. The North Bay supply was showing increasingly dangerous each succeeding year. The town is to be congratulated that they have installed their chlorine equipment before serious results have occurred.

Burk's Falls.—The town of Burk's Falls obtains its water supply from Reazen Lake. The water contains a large quantity of organic matter and is dark in colour and is repulsive in taste and odour. The Department's Sanitary Engineering Division, at the request of the town and this office, gave the municipality considerable assistance in the hope that the filter installed there some years ago could be put into commission. They found great difficulty in securing a coagulant that will precipitate sufficiently fast to make the filter effective.

Timmins.—The Hollinger Mine found it necessary to put in a large pumping plant to supply their requirements in the mill, and they offered to pump the town's supply at a cost basis. This arrangement was put into operation and the total output of these pumps is chlorinated. The town's supply is therefore safer than at any previous time.

Kirkland Lake.—A new water system was completed during the past year for Kirkland Lake. Efficient provision of chlorination was a requirement of the installation. The results were very satisfactory. Gull Lake was known to be exposed to the possibilities of pollution, but is the best supply in the neighbourhood.

Sewers and Sewerage Plants

North Bay.—West end septic tank was washed out during the freshet of the spring of 1923. A new tank was built in its place during the past summer. There has been some difficulty with it. The outlet was not large enough, so that it will be necessary to correct this in order to handle the extra quantities in the spring.

The east end tank has caused considerable nuisance by discharging on the shore. The difficulty was found to be in the outlet. Finally, a new and larger outlet was provided during the year which removed the danger of the recurrence of the nuisance.

Recommendations

Let me repeat again that the district officers require statistical data upon which an estimate of the value of the work accomplished can be arrived at. At the present time the district officer has no vital bookkeeping to show when the balance is on the right side. Statistical data is essential to good public health work, and I would respectfully urge your Board to arrange to provide promptly complete data to the district officers.

I would recommend that the sanitary inspectors in the Northern District be placed under the direct supervision of the district officer and that at least one sanitary inspector be appointed to each of the organized districts.

The public health nursing in this district is not being adequately met. The nursing staff has more than justified its existence, and it should be added to in sufficient numbers to do the work. I would recommend that three more nurses be added to this district.

ANNUAL REPORT, DISTRICT NO. 7, TO THE DEPARTMENT OF HEALTH

G. L. Sparks, M.D., District Officer

I have the honour to submit the following report of work done during 1924 in District No. 7, which includes the Districts of Thunder Bay, Rainy River, Kenora and Patricia.

Dairies

Thirty dairies (including three milk pasteurization plants) were inspected as follows:—

Port Arthur (and McIntyre township)	7	(including 1 pasteurizing plant)
Fort William	4	(including 1 pasteurizing plant)
Kenora (and farming area surrounding town)	11	(including 1 pasteurizing plant)
Keewatin (farming area surrounding town)	2	
Sioux Lookout	2	
Fort Frances	4	
Total	30	(including 3 pasteurizing plants)

The above-mentioned inspections were restricted mainly to equipment such as stables, utensils, and milk-rooms or milk-houses. Except for observations as to cleanliness of equipment and surroundings, it has been impracticable for me to carry on inspections in sufficient detail to accurately gauge the effects of the methods followed by the milk producers upon the sanitary quality of

municipal milk supplies throughout the district. Consumers are entitled to milk supplies that are reasonably clean and safe; and local authorities are faced with the responsibility of using every possible means to maintain continuous effective supervision over the sanitary quality of this food. I would repeat the observations contained in my annual report for 1923, viz.: that, "except for the sediment test, and a few bacterial counts at intervals, no routine laboratory supervision has been maintained during the year over the sanitary quality of municipal milk supplies in District No. 7. Fort William and Port Arthur at least have laboratory facilities available at the Provincial Board of Health Branch Laboratory in Fort William to enable the local authorities of these two cities to adopt some permanent system of bacterial counts." Owing to distances from Fort William this procedure would be more difficult for local health officials in the Districts of Kenora and Rainy River; but the full-time health officials of Fort William and Port Arthur have supervision over the milk supplies of between one-third and one-half the population of District No. 7. One of the most prominent public health authorities on this continent has stated that "the number of bacteria in milk is the best single index we have of its general sanitary character." (See page 776, Preventive Medicine and Hygiene, by Milton J. Rosenau, fourth edition, 1921.) The three following quotations from the "Third Report of The Commission on Milk Standards appointed by The New York Milk Committee" may also be of interest:—

(1) "On the subject of laboratory examinations of milk for bacteria the commission believes that the interests of public health demand that the control of milk supplies, both as to production and distribution, should include regular laboratory examinations of milk by bacteriological methods."

(2) "The Commission recognizes that the number of bacteria in milk is controlled in the majority of instances by three factors: dirt, temperature or age."

(3) "Because high bacterial counts indicate milk is either warm, dirty or stale, the bacterial count is an indicator of decency in milk character, entirely apart from its significance as an indicator of the safety of milk."

I am advised by the Director of the Provincial Board of Health Branch Laboratory at Fort William that he is in a position to do bacterial counts on milk samples collected by the local health authorities of Port Arthur and Fort William; and I shall continue in an endeavour to urge these local health authorities to send milk samples to the Laboratory at regular and frequent intervals for bacterial counts.

Three milk pasteurization plants were inspected during the year. Two plants (one in Fort William and one in Port Arthur) were found to be equipped with recording thermographs; but at the plant in the Town of Kenora a reading thermometer suspended by a string was apparently lowered into the milk at intervals during the process of heating, holding and subsequent cooling. This procedure made it necessary to open the lid on the pasteurizer every time a temperature reading was taken; and naturally no continuous record of temperature could be obtained, while the frequent opening of the pasteurizer did not lessen the possibility of contamination of the milk. The installation and operation of milk pasteurization plants should be under strict public health supervision, backed up by stringent regulations regarding temperature records, sterilization of machinery and containers, etc.; and also regarding medical inspection of employees.

It should also be made illegal for any person or corporation to offer for sale pasteurized milk unless every bottle of this milk be labelled as such, stating the degree of heat and the length of time, and the date on which the process

was done. Evidently we cannot hope for the immediate eradication of bovine tuberculosis from dairy herds; and if pasteurization is the most practicable method of destruction of pathogenic bacteria that may get into the milk during production, all milk pasteurization plants should be so regulated as to guarantee *pasteurized* milk free from pathogenic organisms at the time of delivery to the consumer.

Water Supplies and Water Purification

During the months of July and November, engineers from the Division of Sanitary Engineering inspected the municipal chlorine control plants operating in the district. I would recommend that these inspections be repeated every two months throughout the year. I would also recommend that the Department require the frequent sending to a bacteriological laboratory (at least three times a week) of tap samples collected from municipal water supplies where water purification plants are in operation, so that some degree of uniform bacteriological control may be maintained over the efficiency of such plants. In view of the fact that the Department supplies free of charge sterile containers in mailing tubes, municipal authorities will have no difficulty in meeting such a requirement as the Department's Branch Laboratories are maintained in different parts of the Province. As proof of the necessity for bacteriological control, in addition to the "Ortho-Tolidin" test (in use at each plant), I would direct attention to my report dated October 14th, 1924, *re* "Ineffective Purification, Municipal Water Supply, Rainy River Town."

Following your engineer's visit on July 26th, 1924, to the chlorine control plant in Rainy River Town, samples from municipal water supply sent (between July 29th, 1924, and October 6th, 1924) by the local M.O.H. to the Fort William Branch Laboratory showed pollution varying from colon bacilli in 20 c.c. to colon in 1 c.c. If a "purified" (chlorinated) water contains living colon bacilli, what proof have we that living typhoid bacilli may not also be present? The real standard of safety is a "sterile" water; and the bacteriological control is the ultimate check upon the efficiency of water purification plants.

I may say that the chlorine control plants at Port Arthur, Fort Frances and Kenora have apparently been operating efficiently throughout the year; although the Port Arthur Medical Officer of Health is the only local medical officer of health having jurisdiction over a water purification plant who sends water samples to the Laboratory at anything like an approach to sufficiently frequent intervals.

During the year the Canadian National Railways installed a liquid chlorine control apparatus in connection with their water supply at Sioux Lookout. Owing to the fact that when the pump stopped operating air was drawn in through the chlorinating machine to the suction pipe and the pump lost its prime, the water supply was being chlorinated for only eight hours out of the twenty-four, or only when the pumphouse operator was on duty. An attempt has been made to remedy this defect by the installation of a new foot-valve in the suction pipe; and it is hoped this will permit the chlorine control apparatus to operate during the entire twenty-four hours.

Between September 24th and October 1st I accompanied Mr. G. A. H. Burn (Division of Sanitary Engineering) on an inspection carried on in the city of Fort William for the purpose of ascertaining the extent of compliance with the Provincial Board's "Regulations Governing the Connection of Auxiliary, Railway, Factory or Other Supplies, including Fire Protection Systems, or Apparatus with a Municipal Waterworks System, the Distribution of which is for Public, Domestic or General Use." Needless to say it is of the utmost

importance that the above-mentioned Regulations be strictly enforced so as to prevent the possibility of polluted water from the Kaministiquia River gaining entrance at any time to the Fort William city mains. Mr. Burn carried on similar inspections at Port Arthur, Kenora and Fort Frances.

It is becoming increasingly difficult to maintain effective supervision over the water supplies of small communities where chlorination or other water purification plants are not in operation. In some instances it would appear that chlorination is the only practicable method to ensure a safe supply of water for domestic purposes. I would repeat the recommendation made in my annual report for 1923 regarding sanitary surveys of Nipigon and Ignace by a field party from the Division of Sanitary Engineering. It is out of the question to attempt personal supervision of private water supplies obtained from wells, springs, etc.

Sewage Disposal

Conditions as to sewage disposal were practically the same as during the previous year. The Fort William sewage outfalls at the Neebing River have been provided with extensions so that the raw sewage is carried directly into the river instead of being discharged upon the banks as had been the case owing to low water during the early part of the summer.

Two cities and two towns in District No. 7 discharge raw sewage into waters used as sources of public water supply. Economic conditions no doubt prevent an immediate change from this method of disposal; but in the meantime the wording of Section 91 (ninety-one) of the Public Health Act might be brought more into accordance with the facts as they exist.

Night Soil, Manure and Garbage Disposal

During the year I have endeavoured to impress upon local authorities the importance of strict attention to effective supervision over municipal nuisance grounds. The Keewatin municipal nuisance ground showed considerable improvement as a separate area has been set apart for night soil which, on the date of inspection, was found to have been buried in shallow trenches. The long severe winter season in this district compels a general spring clean up of garbage and rubbish; also a general cleaning out of privies and outhouses. The effective disposal of night soil is a difficult problem during the winter months.

Summer Resorts

During the season I accompanied Dr. C. N. Laurie, M.O.H., on an inspection of four summer resorts in the Municipality of Shuniah. Sanitary conditions at Ishkabibble Beach and Green Bay Beach showed considerable improvement over the previous year owing to the appointment by the municipality of a full-time sanitary inspector for the months of July and August. Sanitary conditions at Loon Lake were not so bad as during 1923; but on the date of inspection it was found that much remained to be done if Loon Lake is to become a sanitary summer resort. Conditions at Birch Beach were fairly good owing to the small number of cottages and their isolated position.

Sanitary Inspection of Schools in Territory Without Municipal Organization

During the year sanitary inspections of eight schools in territory without municipal organization were completed and reports forwarded.

I was accompanied on six of the above-mentioned inspections by Mr. W. C. Millar, Provincial Sanitary Inspector. Until adequate local health machinery is created for the unorganized agricultural townships thrown open for settlement, effective public health supervision over this territory will be a practical impossibility.

Communicable Diseases

About August 1st I received a letter from the Department suggesting that I discuss the matter of weekly reports with the secretaries of the local boards of health and try to arrange to have reports sent in weekly, especially asking that "nil" reports should be rendered. Up to the end of 1924 I have personally visited ten (10) secretaries, a few of whom appear to be reporting more regularly, as more weekly cards are being returned to this office from the Department. However, I believe that section twenty-four (24) of the Public Health Act should be amended so as to make it compulsory for the secretary of every local board of health to send reports weekly including the rendering of "nil" reports when there are no communicable diseases or deaths during any particular week.

Smallpox was reported from six municipalities in the district; but the total number of reported cases did not exceed fourteen. Immediately following the appearance of one case of smallpox in the town of Rainy River, a proclamation signed by the Mayor was issued under authority of Section 12 of the Vaccination Act, calling upon every resident of the town who had not been vaccinated within seven years to appear for vaccination; and I was informed that the proclamation was generally obeyed. No fresh cases of smallpox developed in the town of Rainy River during the balance of the year; and the local authorities of that town are to be congratulated upon their prompt measures for the suppression of the disease. During the early part of the year I endeavoured to impress upon local boards of health the importance of enforcing Section 13 of the Vaccination Act, regarding the vaccination against smallpox of children attending school; and I have been advised that this section of the Act has been enforced in many municipalities throughout the District.

The local authorities of Fort William, Port Arthur and Fort Frances have published notices in the newspapers requesting the public to comply with the requirements of Section 8 of the Vaccination Act regarding the vaccination against smallpox of children at three or four months of age; but I have yet to observe any marked tendency on the part of the local authorities throughout the district to enforce a general observance of this section of the Act.

There was a considerable increase in the incidence of diphtheria over the previous year. The general conferring of an active immunity by means of toxin-antitoxin would no doubt reduce the incidence of diphtheria; and the work carried on by Dr. R. M. Boyd, M.O.H., Fort William, is an example of what may be accomplished. I am advised by Dr. Boyd that during the year he gave the complete series of toxin-antitoxin inoculations to more than a thousand children attending school in the city of Fort William; and of these, three have shown symptoms of diphtheria.

During the spring a serious outbreak of typhoid fever occurred among the members of a C.P.R. bridge gang employed on construction work at Jackfish (Unorganized), in the District of Thunder Bay, and eleven cases of typhoid fever were reported. I visited Jackfish and, so far as I could learn, the infection must have been contracted at Jackfish, presumably from drinking water polluted by storm drainage during the spring thaws, or possibly from a typhoid "carrier" employed in one of the kitchens. The epidemic was finally brought under control after strenuous work upon the part of Dr. H. S. Crowe, of Schreiber,

who inoculated (with anti-typhoid vaccine) between fifty and sixty C.P.R. employees at Jackfish. This outbreak of typhoid fever at Jackfish illustrates the extreme danger existing in District No. 7, owing to the lack of sanitary supervision over railway bridge gangs, extra gangs and maintenance-of-way gangs working in territory without municipal organization. These gangs move up and down the lines and are housed as a rule in converted box cars. If these gangs come under The Provincial Board of Health "Regulations for the Sanitary Control of Mining Camps, Saw Mills and Other Industries situated in the Unorganized Territory" (see page 20, Regulations), I would recommend that the Department require railway companies to comply with the Regulations regarding Sanitary and Medical Contracts. If the above-mentioned Regulations are not applicable, they should be amended so that the railway companies will be compelled to contract for sanitary supervision and medical care of all gangs working in territory without municipal organization.

During the year I have got in touch with all private physicians in the district who have sent blood specimens to the Provincial Laboratories for Widal Test, whether the report was positive or negative; and have communicated the particulars to the medical officers of health of the municipalities concerned. Detailed reports of these investigations have been forwarded to the Provincial Board of Health.

I would again emphazize the need of a sanatorium in District No. 7 for cases of tuberculosis. During the year five indigent patients from territory without municipal organization were sent to the Toronto Hospital for Consumptives at Weston, the expense of their removal and maintenance being a charge upon the Department. As specified earlier in this report, about one-third the entire population of District No. 7 live in territory without municipal organization; and it is doubtful whether we can hope for the early establishment in this district of a sanatorium under the arrangements at present specified in the "Sanatoria for Consumptives Act."

I would say that throughout the year I have notified local medical officers of health regarding all positive sputum reports received from the Provincial Laboratories.

During September and October the Provincial Board's Travelling Diagnostic Chest Clinic visited the following municipalities in the district: Schreiber, Port Arthur, Fort William, Fort Frances, Rainy River town and Dryden town. The clinic was under the supervision of Dr. G. C. Brink, assisted by Nurse Bricker. This valuable service should be continued in District No. 7 during the coming year.

In our efforts to prevent the spread of scarlet fever in District No. 7, we have had to depend entirely upon early diagnosis, quarantine, isolation and disinfection; and—in the absence of laboratory means—a more or less hopeless attempt to detect scarlet fever "carriers." There was a considerable increase during the year in the number of reported cases of scarlet fever over that of 1923.

The periodical epidemics of measles among children illustrate our utter inability to prevent the spread of this disease by isolation and quarantine.

Medical Inspection of Schools

During the month of August I attended a conference in Toronto, relative to School Medical Inspection which had recently come under the jurisdiction of the Department. Soon after my return to Fort William I visited the following municipalities in an endeavour to have this work undertaken by the local boards of health and school boards, according to the plan approved by the

Provincial Board of Health: Schreiber, Nipigon, Dryden, Kenora, Keewatin and Sioux Lookout. I was given to understand by the Local Board of Health of the town of Sioux Lookout that a full-time nurse would be appointed, providing the five hundred dollars grant were available from the Department. The Medical Officers of Health of Sioux Lookout and Dryden signified their readiness to proceed to Toronto to take the two-day course of instruction in school medical inspection to be put on at the expense of the Provincial Board of Health; and the local boards of health of these two municipalities gave their approval.

It will be impracticable to attempt the medical inspection of schools in territory without municipal organization until such time as a staff sufficiently large is created to undertake this work as a routine procedure.

Public Health Nursing

Two permanent Provincial Public Health Nurses have been on duty in District No. 7 since the spring of 1924, Miss Veitch being in charge of the Dryden area in the District of Kenora, and Miss Murphy being in charge of the area adjoining Port Arthur and Fort William, in the District of Thunder Bay. Child Welfare Clinics were put on in Kenora, Keewatin, Fort William and other centres during the season. Dr. W. J. Bell, Pediatrician, Division of Maternal and Child Welfare, was the physician-in-charge at each clinic.

I would recommend that three Provincial Public Health Nurses be the minimum number of permanent nurses in District No. 7—one each for the Districts of Rainy River, Kenora, and Thunder Bay.

Provincial Branch Laboratory

During the year Dr. N. O. Thomas, Director of the Provincial Board of Health Branch Laboratory at Fort William, has supplied me with copies of all Water Analysis Reports, Widals (positive and negative), positive Sputum Reports and positive Reports of Diphtheria Swabs (diagnosis), in addition to any special reports necessary. The laboratory is an important link in public health work in the district; and it is difficult to see how effective public health work could be carried on in its absence.

ANNUAL REPORT FOR 1924, DISTRICT No. 8

H. W. Johnston, M.D., District Officer

I beg to submit the following report of Public Health work in District No. 8 during the year 1924:

Communicable Disease Control

As in previous years much time has been taken up attempting to control communicable diseases and from the standpoint of checking outbreaks, before the development of an epidemic, it has been the most satisfactory period since the district was established. Only three outbreaks during the year could be classed as epidemics, namely, smallpox in the town of Chapleau and camps in the surrounding territory and measles in the village of Cutler and the town of Espanola, from which 563 cases were reported. In no other instance during the year has there been more than a few isolated cases.

Early in the year a circular letter from the Provincial Board of Health to all secretaries of the local boards of health, gave a very decided stimulation to regular weekly reporting by municipalities. It has resulted also in securing more accurate and regular attention to the regulations by physicians and health officers, because the secretary has found it necessary to secure co-operation in order that he might make his reports reasonably accurate. From the standpoint of local management these more complete reports have also been responsible for more care being taken in regard to reported cases than was formerly taken with cases that came only to the attention of the physician in charge. I believe that if the regulations called for these weekly reports to be mailed directly to the District Officer of Health and by him forwarded to the Provincial Board, the reports would be still more useful by saving several days in the time which it takes them to reach the district office. The value of this early information has been demonstrated a number of times during the year in connection with cases of typhoid fever and diphtheria, where very early information was received from the Provincial Laboratory on Widal reactions or positive swabs. A number of times when these reports have been received it has been possible to secure information regarding the primary case or carrier of diphtheria, or a common source of infection in typhoid, before the condition had become widespread.

The only particularly serious outbreak of communicable disease during the year was the epidemic of smallpox in the Chapleau area during February, and continuing into March and April. The epidemic was unquestionably due to one undiagnosed case which was responsible for spreading infection directly to a hotel staff, railway employees, Indian trappers, and men and families connected with lumber camp operations. The type of case was quite as infectious and as virulent as those reported from the Border Cities about the same time. The epidemic was controlled by general vaccination and by taking every possible means to locate and keep contacts under observation.

Tuberculosis

Special attention has been given to the care of tuberculosis cases and some progress has been made in demonstrating the value of early diagnosis and treatment, and prevention among families exposed. In unorganized territory the results have been particularly gratifying where, in a considerable number of cases, the Province has provided hospital treatment for patients unable to meet any of the expense. Tuberculosis cases in unorganized territory are usually in poor financial circumstances with large families in small homes.

A most interesting investigation is being carried on under the direction of the Provincial Department of Health, in order to secure information on a series of chest conditions—a number of which were fatal—apparently due to dust in a silica quarry near Sault Ste. Marie. The information gained so far would indicate that there is a higher incidence of tuberculosis in Northern Ontario than we were aware of, and that on this account there have been few facilities for taking advantage of the particularly suitable northern climate in treatment. It is also apparent that a larger Public Health Nursing service is required to supervise home treatment of both patient and contacts.

Venereal Disease

Through the facilities for treatment of venereal diseases provided by the Sault Ste. Marie Clinic, it has been possible to care for a considerable number

of cases from outside the city. In nearly all cases that have come to our attention, we have been able to secure attendance at the clinic or to arrange for treatment by a practising physician in the district. Employees in lumber camps still cause the most difficulty among untreated cases and medical camp contracts usually exclude treatment of venereal diseases from the duties of the contract physician. In two instances, also, it has been impossible to secure the attendance at the clinic of cases of venereal diseases returning to their homes from Provincial Institutions. This difficulty arises from the expense entailed in providing transportation and travelling expense from their homes to the clinic.

In connection with Social Hygiene Education an exceedingly valuable demonstration was held in March through the co-operation of the Social Hygiene Committee, Provincial Board of Health, and District Medical Society. The exhibit was well attended throughout the ten days of its showing and was appreciated as being a most valuable means of teaching Sex Hygiene to the public.

Goitre

On instructions from the Provincial Board of Health a casual survey of the prevalence of goitre was made covering the district. Two interesting facts were brought out in the information secured:—

(1) The almost complete absence of goitre arising on the northern watershed, and

(2) The unusual prevalence in communities situated along the main rivers draining to the south—particularly the Spanish and Thessalon Rivers. Goitre was also very prevalent on St. Joseph's Island, and here a number of school sections with the co-operation of the local Medical Officer of Health have undertaken to provide sodium iodide as a prophylactic measure.

Public Health Nursing

Child Welfare activities have been carried on in the district. Demonstrations of school nursing with careful follow-up work in the homes has been particularly valuable in this section.

Sanitary Supervision

Inspections were made in Webbwood, Goulais Bay, Hilton, Little Current, Point Aux Pins, Basswood Lake, Algoma Mills, and Manitowaning. Opening up of motor roads through Algoma, Sudbury and Manitoulin Districts has rapidly increased tourist traffic throughout the North Country, and hotels that are able to accommodate the resulting trade are much encouraged to make the necessary improvements.

Industrial Health Services

The employment of a Public Health and Industrial Nurse by the Austin and Nicholson Lumber Company and the steadily improving general health programme carried on by the Industrial Relation Department of the Spanish River Pulp and Paper Company in their plants at Sault Ste. Marie, Espanola and Sturgeon Falls, have been the two principal activities in this branch during the past year. I have been able to assist in this work through frequent conference with management and employees. During the year the Spanish River Company have extended their programme, begun in Espanola, by the appointment of a full-time plant nurse at the Sault Ste. Marie mill. An outline has

been prepared for adding a service of regular physical examinations of employees. This plant has been endorsed by employees and returned to the management for completion of details. I consider that no more important type of work has been carried on than this. The Public Health Education necessary to introduce these programmes is, in itself, worth much time and effort in the general programme of health promotion. The reasons for and the value of regular health examination had to be "sold" to probably two thousand employees before the company could satisfactorily complete arrangements.

Health in Schools

Interest has been increased in regard to the value of health work in schools, and following a conference with Dr. Phair in August, I took the opportunity to bring this work to the attention of the health officers throughout the district. The co-operation, as outlined between the Department of Education and the Department of Health, was entirely approved. I hope it may still be possible for the Department to give the proposed short course on School Medical Inspection to a number of interested health officers.

This year again an opportunity was given to attend a two weeks' series of Rural School Fairs on Manitoulin Island. During the afternoon of the fairs the Public Health Nurse arranged for weighing and measuring the pupils and pre-school children and for distribution of suitable health literature. In the evening of each day a public health meeting was arranged, where the Department of Agriculture representative provided moving pictures as an added attraction. These fairs provided a particularly favourable opportunity for Public Health Demonstration, as we were able to meet the children with their parents as well as the school officials, and to discuss actual health problems of both the family and the community.

Opportunity for health demonstration in schools was also afforded, through invitations from school boards in unorganized territory, to have the children of certain schools vaccinated. On these occasions time was given for bringing general health information to those present. On several occasions also, I have accompanied the Inspector of Public Schools where particular health problems or sanitary conditions required attention.

There is still a big opportunity for more of this work to be carried on in schools where there is no municipal organization, but the amount of other general work demanding attention over these large areas has so far prevented any systematic programme being arranged, which programme should include regular physical examination of all pupils. This would also require additional Public Health Nursing Staff to follow up the findings in the relation to reported conditions and to assist in arrangements for corrective treatment where indicated.

General Health Education

Other opportunities for keeping health matters before the public have been used:

Each year an exhibit at the Agricultural Social Fairs of Bruce Mines and Sault Ste. Marie is used to interest the public in various phases of Maternal and Child Welfare—Laboratory Service—Communicable Disease Prevention—and Rural Sanitation.

During the winter months moving picture films supplied by the Board of Health were used in places where picture machines were available. In addition to the value of the picture, the films always assure a good attendance on any occasion where health matters are being discussed.

Among other activities allied to Public Health work I was able to assist and co-operate with the Red Cross Society in arranging for a series of home nursing classes in Sault Ste. Marie and, in the preliminary arrangements, for two nursing outposts established in Algoma District at Thessalon and Richard's Landing. These outposts meet a very definite need in supplying a combined service for hospital care and community health.

I was also permitted to work with a committee of the Sault Ste. Marie Rotary Club in their programme for providing clinics and caring for crippled children. Patients from various places in the district were included.

Throughout the year many conditions have arisen requiring co-operation with nearly all the welfare and relief organizations of the district, including both the official departments and voluntary societies, where health problems have arisen.

Each year when summing up the results of the year's work in the district, the fact always recurs, that so many things have had to be left over owing to the size of the field and many opportunities for extending and improving the health service have to be missed owing to lack of time and the long distances to be covered. When conditions warrant a District Health unit for each Judicial District in Northern Ontario, on lines similar to those proposed for county health units, it will be possible to give a much more satisfactory health service —particularly in the large unorganized sections which are a more direct responsibility for the District Officer of Health.

ANNUAL REPORT

Alex. R. White, Chief Sanitary Inspector

I have the honour to submit for your consideration the eighth annual report showing work performed by your sanitary inspectors during the year just closed.

I also submit such conclusions as may have been formed during the year's work.

The report covers and provides for the establishment and maintenance of good sanitary conditions among the lumber camps, mines, saw mills and construction companies scattered throughout Northern Ontario, and also provides for and supervises the medical service which exists for the benefit of the men employed by these industries. The staff of inspectors undertakes, in addition, sanitary work among the small towns and villages which are continually springing up around our large sawmills.

It is very gratifying to again be able to report continued progress, and to say that no serious setback or interruptions have been encountered. On the contrary, I believe industry has shown during the year, in a most convincing manner, its approval of the governmental policy as announced by your officials. I am also convinced that as each year passes the co-operative bond between your officials and industries is further strengthened and relations become more cordial.

I find organizations such as the Canadian Pulp and Paper Association, the Canada Lumbermen's Association and Accident Prevention Association now taking a very active interest in our work. Such organizations have, during the past year, co-operated with us to the fullest extent. I find that in dealing with our large northern industries every opportunity must be embraced that may

help or permit us to fit such health programmes as we may contemplate for the year into such plans as are being developed by the industrial organizations already mentioned. The development of such a policy would undoubtedly stimulate the industries to greater effort. This is especially desirable, since much of our thought must now be concentrated on a solution to the many contributory sources which cause lost time, and more particularly sickness (not communicable), preventable accidents and labour turnover. To make but a slight reduction in any or all three of these items would permit of an annual saving of many thousands of dollars to the industries. It is not possible, however, for the Department to even assist in this work unless upon some partnership basis. For example, any attempt to reduce the period of disability arising out of accident cases, followed by the infection of some minor axe cut, requires the co-operation of the accident prevention organizations, the company physician, together with the camp management, before the issue can be even focussed.

Our success during the year easily equals, if not surpasses, our record of last year, which was by far our best year from the standpoint of accomplishment and the control of communicable disease. Our greatest gain, however, has been in the acceptance by industry of such services as we are able to offer and the admission that there is much sound business economy in good public health administration, provided a sufficient study is made to determine the kind of reform required and sufficiently convincing explanation offered to show clearly the advantages which are to accrue. It has been said that the advantages of good public health cannot be measured in dollars and cents, and while this may be true in a municipal sense it is not nearly so applicable when related to industrial health. The reason for this is obvious, as the municipal expenditure is financed by a multitude of taxpayers, the great proportion of whom pay small heed to cost or to value received. On the other hand, the manager of a large industrial concern must show a profit, if possible, in money either earned or saved as a justification even in the financing of a health programme. For this reason I contend the study of industrial health presents many added features and gradually takes on an aspect requiring, in addition to public health training, good business ability.

The placing of your group of inspectors under the Division of Industrial Hygiene continues to prove satisfactory, and many opportunities for study and the further development of health education among the staff is made available. It is also of great value to be able to refer problems difficult to the lay mind to our medical director and thus provide a solution to most of our problems. Without going outside of the division, I believe the present arrangement, being part lay staff and part medical, is a combination which should be able to cope with almost any situation which may arise. The usefulness of the Research Laboratory, which has been added during the year, should also prove of extreme value and will be used at times in connection with our northern work. The determination of a suitable and safe fumigant for the destruction of lice, roaches and bed bugs, available for use in lumber camps, etc., would solve a question which is of paramount importance to camp owners and is well worth the expenditure of considerable time and experiment.

Lumbering Statistics

Information supplied by the various Crown timber agents, by employers of labour and by your own staff of inspectors shows a total of 199 companies

operating and controlling, together with jobber and sub-jobber, 673 camps which provide employment for 31,387 men.

Added to this, we have situated also in the unorganized territory:

63 sawmills employing	4,963	men
4 paper mills employing	2,890	"
37 road construction camps employing	1,520	"
General construction and extra gang camps employing	6,556	"
68 mining camps employing	3,100	"
2 fishing stations employing	175	"

We have, therefore, a grand total of 269 companies which operate 843 camps and give employment to 50,591 men.

In connection with this work 246 medical and sanitary supervision contracts between physician and company have been accepted by the Department, together with an annual statement showing the extent and location of the operations. These contract or industrial physicians visit the camps or works once each month for the purpose of making a sanitary survey and also visit the camps as often as may be required for the treatment of such men as may be in need of service.

Under the Regulations such physicians are required, after each inspection, to forward a report showing the sanitary efficiency or otherwise of the camps visited, together with a freehand sketch setting out the conformation of the various buildings, slopes of the ground, water supply, drainage, etc. Such data enables the Department to pass judgment upon the situation, as it may not be possible for a representative to visit the works early enough to check up the arrangements upon the ground.

From 1921 onward there has been a fairly rapid increase in the amount of preventive work carried on by these physicians, so also has the number of reports received increased annually. I am sure also that a study of our case record from communicable diseases, which may be found on another page, should prove this contention.

The number of monthly reports received during the current year is 1,205, together with 375 camp sketches showing the construction of various buildings and the location of camp site. It should be here noted that oftentimes a physician's report dealing with the affairs of a single company may cover as many as fifteen camps. As a rule, however, a separate report is made on each camp.

The total number of inspections made by your staff of inspectors, covering camp sanitation, is 474. Additional visits have also been made, including inspection and re-inspection, to seventy-five towns and villages, six schools, fourteen dairies and 148 visits have been made to ships visiting Port Arthur and Fort William for the purpose of checking up the quality of water used on board. I might say this work was undertaken jointly with the Engineering Department of the Department of Health, Federal Government.

We have thus a grand total of inspections made during the year by the industrial physicians, added to those of your staff of inspectors, of 1,823.

It will be seen from these figures that the total visits made by the inspectors is substantially the same as our record of last year and represents almost the maximum in this regard. The visits made by industrial physicians, as indicated by the reports received, is, however, easily three times greater. This is partly explained by the increased demand for a better service by industry and a fuller knowledge of his duties by the physician, and partly by reason of our last annual report being on the basis of nine months rather than the full year.

Communicable Diseases

Our case record of communicable diseases shows a substantial reduction over last year and, save in one instance, was confined to sporadic cases occurring in men within the first two weeks of employment, indicating that infection took place before entering camp. The twelve cases of typhoid fever occurring at Jackfish we believe to be due to poor supervision on the part of the Canadian Pacific Railway. It is expected that arrangements will be completed in the near future which will, in a large measure at least, reduce such happenings in the future.

	Cases	Deaths
Typhoid fever	31	1
Smallpox	16	3
Diphtheria	6	..
Scarlet fever	2	..
Mumps	4	..
Total	59	4

Much lost time has been occasioned this winter due to the prevalence of the common cold. Almost every medical report shows a number of such cases treated and an average of from two to three days lost per patient. There is a singular absence of pneumonia arising from such cases, however, which would indicate fairly good attention on the part of both physician and management.

In my report of last year I made mention of the great improvements which had taken place in camp construction during the last five years, and also drew attention to my belief that much of this was occasioned by the good, workable standards set up by the Department, and to the improved service provided by the physician. This year I find another most important reform being put into effect, namely, the introduction of electricity for camp lighting. Ten years ago this was not thought possible. The temporary nature of the work and the annual moving to new timber stands seemed to be a barrier to the use of any other system of lighting than that supplied by the old oil lamp. This year, however, recognizing that increased comfort means contentment and that contentment usually increases efficiency, electrical installations have this year been provided in sixteen camps, and so well pleased are the owners with the experiment that it would seem once the equipment is arranged so that it may be taken down and transported without too much loss, the scheme bids fair to become a regular part of the camp equipment.

The installation of these lighting sets has another significance, however. The introduction of a gasoline engine necessary for the development of electrical energy will ultimately solve one of our biggest problems in camp life by making available a plentiful supply of hot and cold water under pressure, and thus promoting personal hygiene among the men. If this can be brought about a great step forward will be made that cannot but be productive of the very best results.

Much of my efforts have been directed to special examinations and to the establishment of good relations between industry and the Department. I have also visited each of the districts and have given such assistance as was necessary to each inspector, and at such times have checked up the progress being made and have offered such explanation for our actions as seemed proper. I am also trying to cover as much of my late district at North Bay as time will permit, but I am finding this increasingly difficult owing to the demands of my office work. The huge amount of correspondence occasioned in dealing with the enormous number of reports received, together with the carrying on of the regular

office work, is a large job in itself, and if you will add to this the time spent in advertising our public health activities, which is, of course, extremely vital, you will see at once that some addition to our staff may be necessary.

Such opportunities as have presented themselves for giving addresses on the subject of industrial health have been embraced. Several magazine articles have also been published which, I believe, may do much to explain our position. I believe also that opportunities to speak at industrial conventions will be more frequent in the future, and in this I also see signs that would indicate that we are about to take our proper place as part of the industrial unit, not as a detached organization as in the old days, but part of the operations, as necessary for the success of the undertaking as any other part. For these reasons, then, I contend that our position has been strengthened enormously during the year.

Much of our success comes, of course, from the good co-operative spirit shown by the staff of inspectors. Each of the inspectors has carried out his duties with vigour, enthusiasm and good judgment, and the fact that the huge amount of work shown in this report has been undertaken and brought to a reasonable conclusion, with but one reference to police court arbitration, speaks well for the organization and for the extreme usefulness of our work.

ANNUAL REPORT, 1924, DIVISION OF SANITARY ENGINEERING

F. A. Dallyn, C.E. (Toronto), Director

In presenting the annual report of the Division of Sanitary Engineering for 1924, I am taking the liberty of introducing a brief summary of what has transpired in the Province since the office of Provincial Sanitary Engineer was created in 1913.

Prior to 1913, there were some seven water purification plants in operation, viz.: 1889, Cobourg; 1893, St. Thomas; 1895, Chatham; 1900, Arnprior; 1910, Owen Sound and Weston; 1912, Toronto (slow sand), and some eleven points where chlorine was being used, viz.: 1909, Toronto, 1912, Amherstburg, Brockville, Chatham, Fort Frances, Kenora, Kingston, Midland, Orillia, Ottawa and Sarnia. To-day, there are forty-one purification plants, and ninety-six installations where chlorine is safeguarding the domestic supply. Those installed since 1913, include: purification plants, 1913, Haileybury; 1914, Wallaceburg; 1915, Orillia, Perth, Port Hope; 1916, Iroquois Falls, Niagara-on-the-Lake; 1917, Lindsay, New Toronto, Oshawa, Toronto (mech); 1918, Amherstburg, Dundas, Hawkesbury, Renfrew; 1919, Rockland; 1920, Brampton; 1921, Cutler, Kingsville, Richmond Hill; 1922, Kincardine, Peterborough, Tecumseh; 1923, Dunnville, North York, Port Credit, Whitby; 1924, Chippawa, Thornbury; ?, Cardinal, Smooth Rock Falls, Sturgeon Falls.

Chlorination equipment: 1913, Niagara Falls, Port Arthur, Sault Ste. Marie, St. Thomas, Walkerville, Whitby; 1914, Brantford, Haileybury, Oakville, Pembroke, Port Colborne, Port Hope, St. Catharines; 1915, Guelph, New Toronto, Niagara-on-the-Lake, Perth, Renfrew, Sudbury, Thorold, Wallaceburg; 1916, Belleville, Copper Cliff, Goderich, Grimsby, Ingersoll, Oshawa, Parry Sound, Peterborough, Rainy River, Smith's Falls, Strathroy, Weston; 1917, Cobourg, Dundas, Iroquois Falls, Lindsay, Rockland, Welland; 1918, Dunnville, Hawkesbury, Smooth Rock Falls, Tecumseh; 1919, Cutler, Depot Harbor, Espanola; 1920, Brampton, Cornwall, Courtright, Kapuskasing, Merritton, Napanee, Prescott; 1921, Essex, Hanover, Timmins; 1922, Burlington, Capreol, Crystal Beach; 1923, Alliston, Cobalt, Cochrane, Deseronto, Fort Erie, Hornepayne, Huntsville, Meaford, Port Credit, Stamford Township, Sturgeon Falls, Thessalon; 1924, Bridgeburg, Cardinal, Chapleau, Chippawa, Kirkland Lake, Minaki, North Bay, North York, Sioux Lookout, Thornbury; ? Keewatin, Port Stanley, Scarboro Township.

The programme which has brought about this most creditable situation was developed in 1913 and 1914, after a survey of the Province in respect to the prevalence of typhoid fever, which in Ontario has generally been associated with polluted water supplies. This survey indicated to the Department the points which appeared to serve as foci for the distribution of infection. The first work of the department was to stop-gap these points by the immediate insistence upon the use of chlorine compounds. Following this measure, pressure was brought to bear to advance more adequate types of purification. The expenditures which are represented by the improvements shown in these installations are very considerable, and municipal compliance with the Department's suggestions in many instances, as might be anticipated, was not immediate. The situation to-day, however, is an extremely satisfactory one, and shows for Ontario a greater percentage of municipal water supplies treated by adequate methods than is present in any other similarly industrialized area on this continent. The bearing that this work has had upon the typhoid rate of the Province cannot be over-

estimated. Table No. 1 shows how the typhoid rate for towns and cities has gradually diminished from 1910. There is no periodicity in the rate. That is to say, the decline has been consistent and without any upward trends. The rate for 1924, **namely 2.5,** would appear to be the lowest in the history of the Province, and considerably lower than that of the registration area of the United States.

The work of the Department, which was first confined purely to improving the water supplies throughout the Province, was later directed towards extending municipal sanitation. A situation was found to exist in many municipalities, where the programmes of sewer extensions and extensions to water mains were being held up for false reasons of economy and because there appeared to be some doubt in the minds of the local authorities as to whether works for the reception of sewage would be allowed by the Provincial Board, when not accompanied by sewage treatment schemes. It was early perceived by the Division that the paramount need of the moment was for sewerage facilities for the homes, in order that the property might be drained and that sanitary conveniences could be installed. This work has been encouraged by the Department, and the annual municipal expenditures on this item have leaped yearly, from $265,623, in 1916, to $321,808; to $258,727; to $353,305; to $2,821,244; to $1,400,173; to $1,410,227; to $2,735,018, to $5,141,034 in 1924, in towns, villages and townships alone. In the cities, the expansion has been more in proportion with their increase of population. From 1916, the yearly figures have been $996,648, $498,670, $336,397, $2,190,934, $1,408,980, $1,904,460, $3,938,435, $3,240,280, and $2,479,927 in 1924. The annual estimated expenditures on sewerage exclusive of disposal works from 1916, have been $1,262,271; $821,479; $595,124; $2,544,240; $4,230,225; $3,304,633; $5,348,622; $5,975,299; and $7,620,961, in 1924.

The extension of water mains is equally significant. In 1916, the annual expenditure in cities was approximately $183,689. At that time the interpretation of water works legislation seemed to suggest that extensions to the water works system should not be made without a vote of the people, unless they showed a ten per cent. revenue. The Department attempted to cope with this unfortunate embarrassment and succeeded to the extent that the interests of the public health are now considered paramount, even if the service has to be at cost.

From 1916 the water works expenditures in cities have increased annually as follows:

$183,689; $406,352; $314,400; $1,130,783; $1,207,720; $1,895,152; $1,859,477; $2,101,345; to $1,519,572 in 1924. In towns, villages and townships, the yearly amounts from 1916 have been, $477,425; $1,142,477; $665,615; $1,666,170; $3,236,385; $2,519,185; $3,082,548; $2,639,261, and $3,074,702 in 1924. The total estimated water main expenditures since 1916 have been $661,104; $1,548,799; $980,015; $2,796,953; $4,444,106; $4,414,337; $4,942,025; $4,740,556, and $4,594,274 in 1924, an increase in expenditure of almost four millions over 1916. Despite this increase in capital expenditure, which has been of the utmost benefit to public health, the municipal systems in almost every instance continue to show a surplus in operation.

Following this project the Department has for the past four years been endeavouring to place at the disposal of the local authorities sanitary maps, which show the location of all premises, within the municipality, which are not connected to either water works or sewerage, and also the location of all outdoor privies, septic tanks and private wells in use. These maps and reports are accompanied by an analysis of each individual well, together with a description

of the type of protection, i.e., top and curbing. The information is invaluable to the local authorities and where an efficient health organization exists, advantage is taken of these maps to lay down programmes for the municipal betterment. The maps are also the greatest convenience in locating the breeding places of flies, and where the public co-operate with the local authorities, these maps will be the greatest convenience for fly abatement campaigns. In all, some 154 municipalities have been surveyed in this complete fashion, and it is hoped that the group now outstanding will be handled during 1925.

There were but three incineration plants in the Province prior to 1913 for the disposal of municipal refuse, namely: Toronto, (old plant), Cobalt and Ottawa. Since then, plants have been erected as follows:

1913, Fort William, London, Peterborough, Walkerville; 1914, Fort Frances, Sault Ste. Marie, Stratford; 1915, Kingston, Kitchener, Sudbury; 1917, Toronto, (Don plant); 1918, New Toronto, 1919, Iroquois Falls, Niagara Falls, Sarnia; 1920, Timmins; 1921, Smooth Rock Falls; 1922, Chatham. (Ford City uses the Walkerville incinerator. Mimico uses the New Toronto incinerator.)

The experimental station since its inception in 1910 has released a great deal of valuable information to the municipalities and to the engineering profession. There exists at this time the closest co-operation between the University of Toronto and the Division, some of the instruction in the course for sanitary engineering, in the public health course, being carried on at the experimental station.

At the present time the Department is undertaking to review the provincial situation with respect to the handling and distribution of milk for human consumption. It appears that the municipal milk supply for public health purposes should be put in the same category as the municipal water supply, and that the same scrutiny and the same vigilance should be exercised to insure its quality. A digest of the salient features of the situation is dealt with under a separate heading in this report.

The sanitation of motor camps has been under review during the past year. The situation in this regard is not particularly satisfactory, and it would appear that there is need for provincial regulations in this field. A survey was made during the year, a report of which is included under a separate heading, and the Division has under preparation a set of regulations for your consideration.

The public to-day are interested more than they have ever been in sanitary engineering, and there is an increasing demand on the office for assistance through talks, and requests for technical advice, and for municipal statistics. The question as to whether the time has not arrived for distributing the engineering personnel of the Division at strategic points throughout the Province, and leaving the engineers in the field to deal with the supervision of protective apparatus in connection with water supplies; the reporting upon nuisances now referred to the district medical officers; and all other matters pertinent to the work of the Department, in their respective areas. This is dealt with at greater length elsewhere in this report.

An effort has been made during the past year to tabulate the records of the Department in some more convenient way than the press of work has heretofore permitted. It will be possible in the future to furnish manufacturers, municipal engineers, and other inquirers with a great deal of useful information compiled from our records.

Included in this report is a list of the vitrified tile and concrete sewer pipe, listed by sizes, used in the Province during the years 1923 and 1924.

The Department has now under advisement the preparation of a water works hand book listing the salient features in connection with the water works systems of Ontario municipalities. These, we trust, will be available sometime in 1925.

Municipal water works systems have been established since 1909, as follows: 1910, Burlington, Cobalt, Fort Erie, Markdale, Rainy River, Weston; 1911, Blyth, Exeter, Tavistock, Thamesville; 1912, Bourget, Cochrane, Dresden, Harriston, Streetsville; 1913, Brighton, Copper Cliff, Fergus, Parkhill, Port Stanley, Stamford Township; 1914, Bowmanville, Elmvale, Englehart, New Toronto, Point Edward, Timmins, Tottenham, Wallaceburg; 1915, Carleton Place, Ford City, Hespeler, Lambeth, Leaside, Matheson, Mimico, Sandwich East Township; 1916, Grantham Township, 1917, Port Dover; 1918, Crowland Township; 1919, Acton, Eastview, Milverton; 1920, Courtright, Port Dalhousie, Scarborough Township; 1921, Anderdon Township, Riverside; 1922, Nelson Township, North Grimsby Township, Plantagenet, Port Credit, Richmond Hill, Ridgetown, Woodbridge; 1923, Dryden, Fonthill, St. Clair Beach, Teck Township, Tisdale Township; 1924, Thornbury, West Ferris Township, Espanola, Etobicoke Township, Forest Hill, Hornepayne, Iroquois Falls, Kapuskasing, Rockland, Smooth Rock Falls, Sioux Lookout, Tecumseh, York Township, Chippawa, Crystal Beach, East York Township, Forest, North York Township, Sandwich West Township.

The applications in connection with water works and sewer extensions, recommended for approval, show the total expenditure on these two items for the year to be $12,830,606.34.

Sixteen liquid chlorination equipments were installed during the year, two of which were new installations, three replacing liquid equipments, one replacing bleach equipment, and one as an additional unit. Twelve of these installations were of the pedestal type vacuum chlorinator.

PROPOSED DISTRIBUTION OF ENGINEERING PERSONNEL INTO HEALTH DISTRICTS

By F. A. Dallyn, C.E. (Tor.), M.E.I.C., Provincial Sanitary Inspector.

During the past five years the work of the Division of Sanitary Engineering has assumed very extensive proportions. This work has been steadily increasing each year as a result of the construction of more and more works for the protection and purification of water supplies, and for the disposal of sewage, garbage and nightsoil. The public are thoroughly awakened to the need of this work, and are making an increasing demand on the division for advice and assistance in the obtaining of better and more sanitary living conditions.

Since the establishment of the office of Provincial Sanitary Engineer in 1913, the work has all been done direct from a central office, but the field is now so broad that the division of the older section of the Province at least into districts, and the establishment of a resident engineer in each district would seem advisable. The assumption of this policy would not only enable the regular work of the Department to be carried on more efficiently, but, also, by reason of the greater personal contact of an engineer with the various municipal heads would increase the usefulness of the service during the construction of many municipal improvements, and tend to further foster and enlarge the goodwill at present existing between the Department and the municipal councils throughout the Province.

The field covered by a district sanitary engineer may be discussed under the following heads:—

(1) Supervision and inspection of protective and purification apparatus for water supplies, and sewage disposal.
(2) Inspection, control and removal of nuisances.
(3) General oversight of the municipal programme with respect to sanitation.
(4) Supervision of milk supplies from a public health standpoint.
(5) Enforcement of Special Regulations of the Provincial Department of Health.

(1) *Supervision and Inspection, etc.*

The extent to which the investment of municipalities in water works and sewerage systems has been increased may best be judged by a comparison of the cost of approved extensions for the years 1916, 1919 and 1923. In 1916, approvals to the value of $1,324,132.90 for sewers and $685,937.52 for water works were granted. In 1919, the figures were $2,786,481.07 and $2,722,217.46 respectively, while in 1923 they were $6,169,221.57 and $5,123,479.93. We have in the Province to-day thirty-eight filtration plants. In addition, nine plants are projected or in the course of construction. In 1923 there were a total of seventy-four municipal supplies which were being protected by means of liquid chlorine apparatus. In addition, thirty-seven supplies, other than municipal, were being safeguarded in like manner. Besides these, there are fourteen supplies being treated with chloride of lime equipment. This makes a total of 125 chlorination plants in the Province. In 1923 alone there were thirty-five additional installations of liquid chlorine equipment.

In 1923 an inspection service was instituted to supervise the municipal chlorination plants, and very gratifying results have been achieved as a result of this service. With a district engineer more frequent inspections would be possible and the value of the service enhanced. In addition, with a district engineer readily available, better supervision of filtration plants would also be possible.

Many of these plants are comparatively small units, and the plant operators are not well informed on filter-plant operation. The engineer, acting as an intimate link between the plant operator and the Department, can smooth out many of their difficulties and thus secure a more satisfactory effluent from the filtration plant.

A similar service would be provided in connection with the operation of sewage disposal works.

The outbreaks of typhoid fever could to a considerable degree be forestalled and the assistance of the Sanitary Engineering Division to the District Officers of Health will do much in handling more efficiently the occasional epidemic, and force them under control in a shorter period of time.

(2) *Inspection, Control and Removal of Nuisances.*

During the course of each year many complaints *re* nuisances arising from the discharge of creamery and cannery wastes, as well as other objectionable trade wastes, are received by the District Officers of Health. If the nuisance arising is serious or difficult of solution, the Engineering Division is now invariably requested to suggest and advise ways and means of control or removal. If the district had a sanitary engineer, the central office could proceed more conveniently to a solution of situations such as these, and the vestments of the interests affected be would better protected, and more rapid action could be secured in the abatement of these troubles.

(3) *General Oversight of the Municipal Programme re Sanitation.*

This field is a very broad one, and the value of the service is largely dependent upon the intimate contact which will be established between the Department and the municipal authorities through the medium of the engineer. During the past five years 154 sanitary surveys of the cities, towns and villages of the Province have been made. These surveys have placed in the hands of the engineer an enormous mass of valuable information which has been of great service to the Department, but which would be of much greater value if it were better distributed. It would be the duty of the district engineer to take these sanitary survey reports and maps and bring them before the various municipal bodies affected, explaining the nature of the findings and giving helpful advice as to how the local problems, of which each municipality has one or more, may be best attacked and solved to the advantage of the municipality at a minimum cost.

In one town, for example, the question of some system of nightsoil and garbage collection may be to the fore. The local Board of Health and council will require information in regard to the different methods of collection and disposal in vogue. This information can be supplied by the district engineer, who will also be of assistance in revising the technical clauses of a suitable by-law to cover the local situation. At another municipality the extension of the sewerage facilities and of the water works system may be the pressing need of the moment.

The district engineer may be of valuable assistance in showing the necessity for making these extensions, and also for enforcing a local by-law requiring the connection with these services on all streets where they are available. Many muncipalities now have no by-law of this nature, and some of those which have do not enforce it.

There is also a crying need at present for more educational work in regard to the introduction in every municipality of sane plumbing regulations. This is necessary not only as a means of conserving the water supply, as a great deal of

the wastage in most instances is due to defective and leaking fixtures, the result of lax plumbing regulations, but also in order that a sane, minimum standard code may be general throughout the Province.

In some municipalities the question of fly control is an important one. In regard to this subject, considerable research work has been performed by the Engineering Division, the report of which appears in the "Annual Report of the Provincial Board of Health for 1921." The district engineer would be in a position to organize local interest in this question which should lead to the elimination of this pest to the general public.

During the past few years the enormous increase in motor traffic has led to the establishment of many tourist camps throughout the Province. Here again is work for the district engineer in the periodic inspection of the water supplies and sanitary facilities at such camps.

As a special service much good work can be done along the line of protection of private well supplies. This service could be particularly applicable to urban and surburban areas as the Department of Agriculture is now looking after the country districts. One of the features of the sanitary surveys which have been conducted during the past few years has been the bacterial examination of all private domestic wells. The results of these analyses have shown that only a small percentage of wells in urban districts are free from pollution, and that much of the pollution is due to ignorance on the part of the general public in regard to the proper construction and protection of such supplies.

These are only some of the features of the engineer's field in public health education, and while progress may seem slow at first, the results will become more and more apparent as the engineer becomes better acquainted with his district. The value ot a more intimate connection between the Board and the municipal authorities is strikingly exemplified in the results achieved from the chlorination inspection service instituted in 1923. This service, in addition to providing a regular inspection of chlorination equipment, included the supplying of all plant operators with a solution of ortho-tolidin and colour standards with which they might make periodic tests themselves in order to insure that the local supply is safeguarded at all times. In spite of the simplicity of the test, many operators with the layman's innate dislike for chemicals, were either dubious of the test itself or of their ability to perform it. Gradually, as a result of regular inspections, the simplicity and efficiency of the test have appealed to them so that now most of the operators are making regular tests, daily or oftener, and some even keep a daily log which is at the disposal of the inspector making his visit. *This increased interest in maintaining a safe water supply which has been stimulated as a result of the co-operation secured through the medium of the Board's inspectors, has not only secured a marked improvement in the average quality of the water supplied from these water works plants, but, in the opinion of the Department, is responsible for the unusually favourable typhoid rate in 1924, which for Ontario was 2.5.*

Similar improvement along other lines would follow the establishment of district engineers. Many projects come up before local councils which are dropped or held in abeyance for long periods. Helpful advice would often stimulate further public participation in many worthy projects. Though there might at first be the same diffidence on the part of municipal bodies in regard to consulting the Board's district representative, this attitude would soon disappear when they realized that these men were placed for their convenience.

(4) *Milk.*

The most casual survey of the milk problem indicates a definite field for the

Department of Public Health as apart from the ground covered by the Department of Agriculture. Considerable research work has been conducted in the past two years by the Sanitary Engineering Division. One report appears in the "Annual Report of the Board for 1923." These experiments have been carried on with a view to discovering the part played by various factors entering into the production and sale of milk, and have indicated the need for some amendments to be made in the "Milk Act," which will define by way of provincial regulations the requirements *re* cleansing of bottles and other utensils and the packaging of milk sold for public use.

The district engineer would be in a position to assume a certain amount of supervision over the local milk supplies of his district, to assist in enforcing milk by-laws adapted to the local needs, and to assist local inspectors by instruction until such time as these inspectors become thoroughly conversant with the subject and know where to look for dangerous practices and how to overcome them.

(5) *Enforcement of Special Regulations.*

Under this section comes regulations respecting connections between auxiliary water supplies including fire protection systems and municipal supplies, regulations governing the construction and management of swimming pools, and regulations governing the bottling, etc., of beverages.

In connection with the first regulations, a survey of the Province conducted by the Division in 1924 revealed the fact that there were 120 industrial plants which had emergency fire pumping equipment connected with municipal systems. Many of these have not yet installed the special type of check-valve required, and though most will probably have complied in this respect by the end of 1925, regular inspections of these installations will still be necessary to ensure their being kept in proper working order.

In the course of this survey it was also discovered that many industrial corporations had industrial supplies of doubtful quality to which they were maintaining emergency connections with municipal supplies. The Provincial Board of Health has practically no record of these connections and many more would probably be unearthed by the district engineers in the course of their inspections.

ACTIVITIES OF THE EXPERIMENTAL STATION FOR 1924

A. V. DeLaPorte, B.A. Sc., Chem. E. (Tor.), M.E.I.C.

During the past few years, field work has been making ever-increasing demands upon the staff of the experimental station. The activities during the summer especially are principally of this nature. From the beginning of May, 1924, to the end of October, a field party of four men was maintained on the road almost continuously making sanitary surveys, inspecting motor camps, and carrying on the regular inspection of chlorination plants in the Province. Sanitary surveys of thirty-six municipalities were made, and 127 motor camps inspected.

The sanitary surveys involve the sampling of all wells for domestic purposes, and these samples are all examined at the experimental station. Consequently, when a field party is out, the remainder of the staff is kept busy at routine laboratory work. During 1924, 7,000 samples were given bacterial examination, and a complete chemical analysis was made of fifty-five water and sewage samples.

From the first of May until the end of October, very little opportunity is offered for the carrying on of special research work, and this must necessarily be confined largely to the first four months of the year and the last two. During this period, also, a considerable volume of work is accomplished in the draughting of sanitary survey maps and the completion of survey reports, and lists of the results of the examination of well samples collected. The regular inspection of chlorination plants is also continued over this period.

In spite of the rather limited time at the disposal of the staff for work of a purely research character, several experiments and investigations were conducted. These included the investigation of the operation of a pressure mechanical filter at Burks Falls. Special research in regard to the efficiency of different methods of operation of gravity mechanical filters, further experimental work on the effect of aeration in the removal of tastes in the Lindsay water supply, and investigation of the use of indicators and inhibitors in standard media; special research re the putrescibility of sewage, and analyses for iodine of the various brands of common salt on the market as well as the mineral springs of the Province.

The problem at Burks Falls involved two factors: (1) the adoption of a satisfactory chemical dosage, and (2) the choosing of a suitable method for the application of the coagulant solution. This water supply is secured from Reazin Lake, and is a soft highly-coloured water. Waters of this nature require an excessive dosage of alum to appreciably affect the colour. Being soft, large doses of alum reduce the Ph value to a point within the acid range, or if already acid, increase the acidity. To prevent red water troubles, other chemicals must be added as correctives. This complicates the chemical dosage somewhat, and experiments were conducted to try to remedy this.

Laboratory tests conducted with sodium aluminate were fairly successful in highly-acid waters. It tended to neutralize the acidity, and gave an excellent floc. Owing to the high aluminum content as compared with ordinary alum, smaller dosages could be used, but even with minimum doses, there are few waters sufficiently acid to completely precipitate the sodium aluminate required for filter purposes.

It was found, however, that when solutions of alum and soda ash of certain strength were added together, the first precipitate of aluminum hydrate was re-

dissolved. When this resulting solution is diluted with water, the sodium alumina compound breaks up almost instantaneously, giving an aluminum hydrate floc. This coagulant has been tested in the laboratory on a number of different types of water and in every instance has given excellent results. It would appear to lend itself particularly to the treatment of waters with a low alkalinity and a Ph value approaching or within the acid range as there is sufficient sodium carbonate in the mixture to neutralize the acidity of the alum, thus overcoming to a large extent the necessity for corrective treatment.

It is proposed to test the efficiency of this innovation in chemical treatment on the Burks Falls supply, early in 1925. Should the results achieved from a practical application confirm laboratory findings, the problems of other water works plants treating a similar type of water will be simplified.

The other problem at Burks Falls arose from the fact that the filter is inserted on the gravity main feeding the town. The rate of flow through the filter being controlled by the consumption in the village varied greatly, and it was a difficult matter to secure a proper dosage of coagulant at all times. This maintenance of a correct dosage is an important factor in treating a water of this nature, but the difficulty promises to be overcome by the use of a chlorometer for applying the coagulant solution.

An investigation of the efficiency of a gravity mechanical filter using different chemicals, and particularly of the part pre-chlorination is supposed to play in increasing filter runs and decreasing coagulent requirements is being conducted at present. Some difficulty has been experienced in arriving at a basis for calculation of filter efficiency when pre-chlorination is practised, as even minimum doses of chlorine give a high bacterial removal. Results already achieved indicate that some very interesting information may be secured upon this rather controversial subject.

The experiment at Lindsay was a continuation of aeration experiments similar to those reported on in 1923 at Richmond Hill, Essex and Forest. Here the object was to eliminate the weedy tastes developing in the municipal supply at certain periods of the year. Unfortunately, the air compressor at the disposal of the Board for this work was too small to be of any value other than to indicate that the problem might be solved if adequate aeration equipment were installed.

In the bacteriological field, special research was commenced towards the end of the year in the use of special dyes and indicators in standard media for the B. coli fermentation test. The object of the experiment was to select some dye or indicator, the use of which would simplify or shorten the more or less complicated and lengthy tests at present in use. Comparisons are being made of the efficiencies of lactose broth, neutral red, crystal violet, bile, brilliant green, Andradi's indicator, and potassium tellurite. A complete report of the findings will be brought forward at a later date on the completion of the work.

Another experiment which is at present under way, deals with the biochemical oxygen demand and putrescibility of sewage. This problem is being studied with a view to determining the effect of temperature, time and dilution.

During the first of the year, chemical analyses for iodine content of all the different brands of table salt on the Ontario market were made. In no case was any trace of iodine discovered. Similar analyses of the waters from the more important mineral springs in the Province were made. Iodine was present in two or three of the springs in the Ottawa Valley, but in none of those in Western Ontario.

The experiments conducted in 1923 in the sanitation of swimming pools are bearing fruit. Considerable interest has been stimulated in this important

matter and steps have been taken at a number of pools to maintain them in a better condition. This year the feasibility of protecting bathing areas by chlorination was investigated.

Sunnyside beach at Toronto was chlorinated on two successive days. The chlorine solution was distributed from a motor launch which cruised up and down the area. In all, over 1,000 lbs. of bleaching powder were discharged into the area in a little over four hours. The experiment was not very successful, because it was found that the water containing the chlorine solution was carried by the along-shore currents away from the bathing area before the solution became diffused. Consequently the chlorine was being more or less wasted. It was obvious that to properly protect such a bathing area, an enormous amount of chlorine would be required, and unless some means were taken to stop the along-shore drift, the cost would be prohibitive.

It has been observed in water pumping stations that where more than one pump takes suction from the same suction line or pump well to which a chlorine solution is being applied, the residual chlorine in the different discharges varies as a result of inadequate mixing or lack of diffusion of the chlorine solution. This has given rise to complaints of tastes in certain sections of the distribution system, with a possibility of non-sterile water in other parts. The problem is at present under consideration and its solution may involve changes in the method of chlorine application in certain municipalities in the Province.

The recommendations of the Provincial Board of Health issued in 1923, that the Milton Worsted Knitting Mills treat their trade wastes with chloride of lime, was adopted, and was entirely successsful. It was found that the wastes were bleached with less chloride of lime than was indicated by laboratory experiments, and since this treatment was adopted, there have been no further complaints as to the discolouration of the stream.

It should be noted in closing that, as most of the research work carried on must be done during the winter months, work of this nature is seriously hampered because the section of the building housing the mechanical equipment and experimental units is not weather-proof. This necessitates the draining of all water lines at the close of each day's work to prevent freezing. It would appear that the important nature of the research carried on would warrant an investigation of the costs of rehabilitation of the building, so that work could be carried on conveniently and continuously.

DEFECTS IN EXISTING ONTARIO MILK LEGISLATION

By A. E. Berry, M.A. Sc., C.E. (Toronto)

The Ontario Milk Commission has described the legislative enactments governing the "production, care and distribution of milk for human consumption and manufacturing purposes," as follows:—

"Like all other Canadian laws, these come under three heads—federal, provincial, and municipal. In matters of agriculture, under which dairying naturally comes, the Dominion and Provincial authorities have concurrent powers, the federal being supreme. The Provinces, therefore, may make practically what laws they choose within reason. The municipalities which receive their powers from the provincial legislatures, may make only such by-laws as are within the scope thereby delegated."

Federal Legislation

"The production, care and distribution of milk being largely a provincial and municipal matter, it is not the subject of any extensive legislation. The health of animals branch of the Dominion Department of Agriculture encourages good breeding by means of the 'record of performances' and other agencies, combats contagious diseases, administers the quarantine regulations, and has charge of the enforcement of the tuberculin test on animals for import or export."

Provincial Legislation

Provincial legislation may conveniently be separated into two branches, one dealing with milk for manufacturing purposes, and the other with milk for human consumption. The former includes:

(*a*) The "Milk, Cheese and Butter Act," passed 1908, and amended 1909.
(*b*) The "Dairy Products Act," 1909.
(*c*) The "Dairy Standards Act," passed 1916, amended 1921.
(*d*) The "Cream and Milk Purchase Act," passed 1920, and repealing a similarly named Act of 1919.

The first of these Acts provided for the appointment of dairy inspectors, upon recommendation of the Minister of Agriculture, and defined their powers. It also provided for keeping the premises of suppliers, creameries and cheese factories in a clean and sanitary condition.

The "Dairy Products Act" required the registration of all creameries, milk condenseries, milk powder factories, collection depots, etc. Inspection was to be made by inspectors appointed under the former Act.

The "Dairy Standards Act" set forth the basis of payment for all milk and cream received at a factory; the pasteurization of all whey to be used for feeding purposes; the grading of cream for butter-making, and the appointment of inspectors by the Minister of Agriculture to carry out the provisions of the Act.

The "Cream and Milk Purchase Act" provided for the purchase of milk and cream on the basis of the butter-fat content, and defined the powers and duties of the inspectors.

None of the above Acts deal with milk which is sold for human consumption.

Milk for Human Consumption

The early provincial laws dealt with the right of municipal councils to appoint inspectors, and to license milk vendors. The local board of health was also enabled under schedule "B" of the Public Health Act, to inspect in their own

municipality, all cows, stables, and places in which milk was either kept or sold, including cheese factories and creameries. Provision was also made against adulteration or alteration of the contents of the milk.

Such Acts were in operation in 1909 when the Ontario Milk Commission was empowered by the Ontario Government to investigate the methods whereby clean, wholesome, and sanitary milk was being successfully supplied to consumers in this or any other country, and to make a report. Their report followed an extensive survey of conditions throughout a number of the larger municipalities of the Province. The observations of the commission, substantiated by the opinions of men with a knowledge of the situation, led them to enunciate the following deficiencies in the legislation at the time.

(1) It did not permit the inspection of barns and producers' equipment, located outside the municipality to which the milk was delivered.
(2) No provincial minimum standards for butter-fat and "total solids content" of milk were in force.
(3) A general definition of adulteration was needed.
(4) Nothing prohibited the use of cans, bottles, and other utensils for purposes other than the storage of milk.
(5) No legal definition existed for certified milk and pasteurized milk.

In 1911 the Ontario Milk Act was passed, and all these objections were overcome. In addition, the municipalities were given more extensive powers, and were enabled to pass by-laws upon approval of the Minister of Agriculture, regulating milk produced for sale, offered for sale or sold within the municipality in respect to:

(*a*) Care of cows.
(b) Cleanliness of stables.
(*c*) Water supplied the cows.
(*d*) Care and cleansing of utensils.
(*e*) Handling of milk.
(*f*) Taking of samples.
(*g*) Granting of licenses to vendors.
(*h*) Fixing the standard for butter fat and total solids.
(*i*) Appointment of inspectors.

Department of Agriculture in the Milk Industry

The initiative for the municipal regulations in respect to the milk industry now rests with the Department of Agriculture, and all municipal by-laws under "the Milk Act" must be approved by the Minister of that Department.

Progress under the Milk Act

Probably one of the chief benefits from "the Milk Act" was the authority given to municipalities to inspect barns and equipment, irrespective of where they were located. This new power on the other hand, led to the placing of a great deal of emphasis upon the condition of the stables, and comparatively little attention to other matters, such as the cleanliness of the pails and various milk utensils. Yet it has been shown conclusively that the condition of the stable is the least important factor in the production of milk of low bacterial content and high keeping qualities. Similarly the utensils have been shown to be the most important factor. Milk handled in well-cleaned and sterilized utensils keeps sweet about sixty per cent. longer at room temperature, than when the pails are washed in the process in use at most dairies. In comparison with this, the effect of the stable is almost negligible.

"The Milk Act" has now been in force for almost fourteen years. What progress has been made in the handling of milk for human consumption in that period? Apart from the inspection of dairies, adulteration, the use of certified and pasteurized terms, the municipalities do not appear to have exercised to advantage those powers conferred by the Legislature. It is only in the larger cities, where an efficient and well-trained inspection staff is operating, that advantage appears to have been taken. In a recent questionnaire prepared by the sanitary engineering division, and returned by the clerks of the municipalities, it was found that all the larger municipalities are operating under by-laws, but only in a few of the larger ones has proper attention been given to matters other than the stables. The smaller municipalities give little, if any, attention to the milk situation.

The "Ontario Milk Act" is an Act whereby permission is granted to municipalities to pass certain by-laws in respect to milk. The fault of the Act lies not so much with the powers granted, but with those municipalities who have not become sufficiently interested to pass and enforce such laws. There is consequently an apparent need for some province-wide sanitary by-law, which, similar to schedule "B" of the "Public Health Act," would be in force in all municipalities until amended by them. Such legislation should be made to deal particularly with the cleaning of milk utensils. Inspection could be carried out by local inspectors in conjunction with officers of the Provincial Department of Health. This co-operation would serve as a training for the local inspectors, and would tend to remove those conditions naturally resulting from the use of untrained inspectors.

REPORT ON FIELD WORK RE FIRE UNDERWRITERS' CROSS-CONNECTIONS

By G. A. H. Burn, B.A.Sc.

A survey of the Province was made in 1924 to ascertain to what extent the regulations passed in 1921, governing the connection of auxiliary railway, factory, or other supplies, including fire protection systems, with a municipal water works system used for domestic purposes, had been complied with.

Owing to certain misconceptions which appear to have arisen amongst many manufacturers affected by these regulations in their interpretation of the law, it is thought best to briefly summarize the main features.

In the first place, all connections between auxiliary supplies of any nature and municipal supplies are forbidden, except those connections provided in the regulations for fire protection only.

Permissible connections for fire protection are dealt with under the following headings, viz.:

(*a*) Where the auxiliary supply consists of an overhead tank.

(*b*) Where the auxiliary supply is pumped from a storage reservoir.

(*c*) Where the auxiliary supply is pumped from a separate source.

For the first type of connection, plants affected were required to install dual check valves, fitted up with necessary devices on their connections with the municipal system. Two check valves of the regular fire underwriters type are permitted on these connections.

For the second class, the installation of dual check valves of special F. M. type was required within a period of two years from the passing of the regulations. It is also required that the reservoirs be protected against the entrance of drainage water or other deleterious matter.

On all connections between auxiliary supplies from a separate source and municipal systems, the installation of dual check valves of special F. M. type was required within six months from the passing of the regulations. Furthermore, if on examination by the Provincial Board any source of private supply could not be approved as of satisfactory quality, or satisfactorily protected for domestic consumption, the corporation so affected faced two alternatives within two years from the passing of the regulations.

(1) Discarding of the unsatisfactory source of supply, and installing an overhead tank or reservoir as an auxiliary source.

(2) Disconnecting from the municipal system, and relying entirely upon the private supply for fire protection.

In the course of the recent survey, particular attention was paid to conditions at plants which had fire pumping equipment of their own. The majority of plants visited were those whose names were secured from lists supplied to the Board by the Associated Factory Mutual Fire Insurance companies, and the Canadian Fire Underwriters Association.

The City of Toronto took over the enforcement of the regulations at plants coming under their jurisdiction, and none of these plants were visited. Any data given, therefore, will not include Toronto.

Seven plants were visited which have combined fire and industrial supplies with fourteen major connections with municipal systems. Two of these have installed double check valves of special F. M. type, and a third has installed double checks, but not the special type required. One plant has a single check

but also a by-pass around the check valve, controlled by a gate valve. At another corporation, there is just a gate separating the two supplies. The sixth plant has separated the two supplies by providing two gates with a drain between on each connection. At the seventh plant, disconnection of the two supplies has been secured. All these separate supplies are subject to serious sewage pollution, and at two other plants disconnection of the two supplies has been asked for.

Sixty-four industrial establishments were inspected which pump auxiliary fire supplies directly from a separate source. Thirty of these with thirty-eight connections have installed double checks of special F. M. type. In one instance, where there are two connections with the municipal system, only one of the checks on each connection is of special F. M. type, the original check on the connection having been left for the second. Of the remaining thirty-four plants with thirty-eight connections, five plants with seven connections have double check valves installed, but not the special F. M. type required. Twenty-seven, with twenty-nine connections, have a single check valve only, and two plants with two connections have a gate valve only separating the two supplies. At three plants, there are by passes around the check valve, permitting the plants to pump direct into the municipal mains. In one instance, the municipal supply is not used for domestic purposes. In almost every instance, the separate supply is taken from a source which cannot be approved as provided under section 9 of the regulations.

Eighteen plants with twenty-seven connections were visited which have reservoirs filled wholly or partially from a separate source, or augmented with industrial returns, rain water, etc. Eleven of these with nineteen connections have installed dual checks of special F. M. type. At one plant, there are two checks in, but they are not of the special type. The remaining plants have single checks only on their connections.

Thirty-one plants with forty-six or forty-eight connections were inspected which have reservoirs filled from the town supply only, nineteen of these with thirty or thirty-two connections have installed double checks of special F.M. type. One company has one special check, and one regular underwriters check on its connection. Of the remaining twelve plants, two have two checks installed on three connections, but these are not the special type. The remainder have single checks only on their connections.

To sum up the findings, of 120 plants interested, sixty-two have installed the special F. M. type of check valves; nine have double check valves, but not the special type; forty-four have single check valves on their connections; four have a gate valve only separating the two supplies; and at one plant disconnection of the two supplies has been secured.

As previously stated where the auxiliary supply is taken from a separate source, the continuance of inter-connection with a municipal supply is dependent upon the ability of the Provincial Board of Health to grant approval of the separate source, under section 9 of the Act. In the course of the survey, the writer found that this feature of the regulations had been either overlooked or misunderstood by practically all corporations affected. Almost all appeared to be under the impression that once they had installed double check valves, they had complied with the Board's requirements.

There are eighty-two corporations affected by this section of the regulations. Seven have combined fire and industrial supplies from a separate source; sixty-four have fire supplies from a separate source, and eleven have reservoirs which are filled from a separate source. Thirty-nine companies have complied with regulations in so far as the installation of double check valves of special F. M.

type is concerned, and one company has separated its supply from that of the municipality.

Of the auxiliary supplies pumped directly from a separate source, only one can be approved under section 9, while in seven instances where reservoirs are filled from a separate source, the separate source can be approved. In one case, the municipal supply is not used for domestic purposes, and no action can be required of the company until such time as the municipal supply is properly safe-guarded. The remaining seventy-two corporations, therefore, must make extensive changes in their fire protection systems in order to conform with the regulations as they now stand.

When the survey was first commenced, reports were sent to the companies inspected, and if their separate source of supply could not be approved, they were asked to consult their underwriters with a view to securing a solution of their problems which would satisfy the demands of the fire underwriters as well as conform with the Board's regulations.

This procedure led to objections from the Associated Factory Mutual Fire Insurance companies, and Mr. H. A. Burnham, their chief inspector, paid a visit to Toronto about the first of June, 1924. Mr. Burnham raised strong objection to cutting off these companies from using an auxiliary supply which could not be approved by the department. He suggested that section 9 of the regulations be changed to read:

"Subject to the approval of the Provincial Board of Health, in writing, a connection may be maintained between a private supply, and a municipal supply system, where the Board upon examination certifies that it is of the opinion that the source of supply is of satisfactory quality, or that the municipal supply is satisfactorily protected against contamination."

This proposed change would allow the Provincial Board to recognize dual check valves of special F. M. type as an adequate safeguard against contamination from a polluted fire supply. It would also make section 3 of the regulations inoperative, as it would obviously be unfair to make a few companies with reservoir auxiliaries keep their reservoirs free from pollution if connections with separate supplies which are polluted, are permitted.

While dual check valves of special F.M. type, when properly supervised, probably give the best protection to a municipal supply that has yet been devised, it is questionable whether the Board should grant its approval of a device which might possibly fail. In the course of the recent survey, seventy-one dual check installations at forty-six different plants were tested, and in sixteen instances one of the checks was leaking. The only other data on the efficiency of special F. M. check valves which has come to the writer's notice appeared in the December, 1923, issue of "The Nation's Health," vol. V. No. 12, page 899. In a short article, headed "Interconnection of Water Supplies," it is stated that in Hartford, Conn., since the installation of check valves in 1919, sixty-one instances of leakage through one valve, and six instances of simultaneous leaking of both valves have been recorded.

While there is no question as to the value from a fire protection standpoint of an auxiliary supply secured from an inexhaustible source, such as a river or lake, the necessity for such an auxiliary supply does not loom so great, if the primary supply, i.e., the municipal supply is conveyed through a well-gridded system, and is secured from an inexhaustible source, or has an adequate reserve for fire protection. One of the chief properties of an efficient fire protection system is that of applying water to a fire as soon as possible after it has started. This is provided for by the design of the sprinkler system, and if this is not at fault, any

fire which may start will rarely gain such headway as to require the services of auxiliary pumping equipment for many hours before it is brought under control. In ordinary practice, where pumping equipment is considered necessary as an auxiliary, and a supply from a separate source is not available, a reservoir containing from two to three hours' supply for the contemplated pump is provided.

It is the writer's opinion that where the municipal supply is reliable, the regulations could be enforced as they now stand without increasing the fire hazard at most of the plants affected by any appreciable degree. In some few instances, however, where the municipal supply is unreliable or limited, or where the local situation is adverse, the enforcement might not be advisable. In all instances also, where a higher pressure than that in the municipal mains is maintained in the private fire protection system by pumps taking suction from a separate source of dubious quality, this practice should be discontinued, or disconnection of the two supplies be insisted upon.

It might perhaps be advisable to withhold the enforcement of section 10 of the regulations for another year, so that more definite information in regard to the efficiency of the special F.M. check valve might be collected. Should, however, the amendment requested by the fire underwriters be granted, the following recommendations are made:

(1) That section 3 of the regulations be deleted.

(2) That section 4 (*b*) be deleted from "provided that" to "testing purposes," and section 4 be numbered section 3.

(3) That a new section 4 be inserted reading:

"In all instances where one or more fire pumps are used in conjunction with a municipal system for fire protection, there shall be placed on the discharge side of each pump a gate valve which shall, except in case of a fire, be closed and sealed with light wire, and between the said pump and sealed valve, a connection with a gate valve arranged to discharge to waste for testing purposes."

The recent survey also revealed the fact that there were many plants throughout the Province which are pumping water for industrial purposes, and have direct emergency connections with the municipal supply. Fifty-five plants with eighty-five connections were visited with supplies of this nature. Section 3 of the regulations prohibits any connection of this kind, but in many instances an emergency connection is practically necessary. The usual practice of control on these connections is by means of gate valves, check valves rarely being provided. This type of connection can only be deemed as dangerous from a public health standpoint. Fortunately, in most cases, these industrial supplies are low-pressure systems, and the municipal pressure is usually greater. However, this fact does not entirely eliminate the danger, and no direct connections such as these should be permitted.

As most of the emergency connections to industrial lines are small, ranging in size from a half inch to three inches, provision for the use of the municipal supply for emergency purposes without subjecting it to chance pollution may be made as follows:

(1) By the installation of a four-way stopcock with a butterfly plug at the point where the municipal and private supplies connect to feed the industrial lines. The two supplies enter from opposite sides of the stopcock, and the fourth opening of the stopcock discharges to waste, so that it is necessary to shut off the supply which is not in use by means of a gate or globe valve. This gives a short length of open pipe separating the two supplies.

(2) The two supplies may be brought from opposite sides to a point near

the dual discharge line. On the discharge line is placed an elbow, short piece of pipe and a union. The piping is so arranged that to make use of either supply, the one must be disconnected and the elbow turned around to meet the other feed line. This gives absolute disconnection of the two supplies at all times.

(3) A tee with a replaceable plug with gate valve on each side of it may be placed on each feed line. When the industrial supply is being used, the tee on this line is plugged and both gate valves open, while on the municipal line both valves are closed and the tee unplugged.

(4) The two supplies may be disconnected by the removal of a short length of pipe which is kept at this point, and may be replaced should the occasion arise.

There are certain objections to the last two devices in so far as their efficiency depends entirely upon the zeal of the employees of the plant. At one plant visited, where the system suggested in No. 3 is in vogue, the plug had not been removed at one of the connections.

Appended hereto is a list of plants visited, together with data in regard to their auxiliary water supplies.

MOTOR TOURIST CAMPS

A. V. DeLaporte, B.A.Sc., Chem. E. (Tor.), M.E.I.C.

An inspection was made in August, 1924, of a number of motor camps throughout the Province. This included all motor camps which were listed in the Motor News columns of the Toronto daily papers, and in addition a number of private camp sites which were not listed. It was impossible without motor cars to inspect all the private camp sites because they are all situated along the highways, and it would require a tour of all the main travelled roads to complete such an inspection. The work was done in conjunction with the chlorination inspection service.

In all, 127 camps were inspected. Town water supplies were available in sixty camps. Wells were used in fifty-six, springs in nine, rivers and lakes in seven, and in four camps there was no provision for a water supply at all. Fifty-four of the wells, springs, rivers and lakes supplies showed considerable contamination, sixteen were fair, and nine were in good condition. Some of the town supplies that were available for use showed contamination. Some supplies, such as Iroquois and Strathroy, are not protected in any way. It would be advisable to have proper notices warning tourists about the supplies which are not safe, and pointing out the places where the drinking water is properly protected.

The Ontario Motor League supplies information to tourists, and it should be possible to secure their co-operation to eliminate the use by tourists of undesirable camping sites.

The city of Niagara Falls, Ontario, licensed the two motor camps in that city, and stipulated that they should install flush closets, baths, etc. The camps are regularly inspected, and are in good condition. Other municipalities will probably follow the example of Niagara Falls. This will not, of course, improve those camps outside town limits.

It would simplify the inspection service of these camps if the highway police were to list those in their respective areas, giving the location, and providing this Department with a copy of such list. This would save much time and expense in locating the camps.

It is therefore recommended:

(1) That the Department of Health of Ontario issue regulations governing motor tourist camps, whether the camps be free or otherwise.

(2) That in camps where the water supply is not of good quality, directions for the protection of the drinking water be conspicuously posted, and where the supply is good, notices stating so be also posted conspicuously.

(3) That the Provincial Police be asked to submit lists of camps in their respective areas.

(4) That the Ontario Motor League be given the information about the various camps for distribution to tourists.

	Name of place	Location	Charge	Approx. area	Water Supply		Sewerage		Refuse	Remarks
					Source	B. Coli per 100 c.c.	Type	Condition and disposal		
1	Alexandria.....	None.								
2	Alliston.....	Exhibition Park.			Town water, F 7, F8.	0	Dry earth privies, men 2, women, 2.	Fair	Cans as receptacles.	Camp not used as yet; clean.
